"Agreeing." This the Master related, while living in the grove of banyan-trees, near Kapilavatthu, in reference to a dispute about wreaths. This (dispute) will appear in the Kuṇála-Játaka. At that time, namely, the Master admonishing (his) relations (said): Emperors! dispute between relatives mutually is, surely not becoming; even (some) animals which had conquered (their) enemies at the time of concord, when quarrelling, suffered great destruction, (and) so having said, (when) called upon by (his) royal relatives, he told a story:

In (times) past, when Brahmadatta reigned in Báránasí, Bodhisatta, having been born a quail, lived in the wood with an attendance of many thousands of quails. Then a quailhunter, after going to their dwelling-place, (and) having counterfeited the cry of quails, and seen that they had assembled, threw (his) net over them, (and) after drawing it together at the sides (and) uniting all in one (heap), he filled his basket, went to (his) house, sold them, and (thus) had his livelihood with that money. But one day Bodhisatta said to those quails, "This fowler destroys our kin; I know a means by (employing) which he will not be able to catch us. Henceforth as soon as the net is thrown over us by him, you, having each of you put (his) head into one mesh of the net (and) lifted the net (and) carried (it) to whatever place you choose. cast (it) on a thorn-bush. This being (done) we shall escape each from under his place." (Saying) Very good! they all promised (to do so). The next day when the net had been thrown over (them), then having lifted the net in the way mentioned by Bodhisatta (and) having cast it on a thornbush, they themselves fled away from underneath. While the fowler was extricating the net from the bush, it had become dark. He went away empty-handed. From the following day the quails act in the same way. And he until sunset (being busy) extricating the net, without having go anything, goes to (his) house empty-handed. Then his wif I

being angry, said, "You come empty-handed every day; I think that outside (this place) there must be (another) for thy sustenance." The fowler (said), "Dear! there is no other place for my sustenance; those quails indeed live in harmony, (and) taking (away with them) the net (as soon as it is) thrown by me, they cast (it) on a thorn-bush and go (away). But surely they will not always live in harmony. Thou must not grieve. When they fall into disunion, then, having taken them all, I shall come and make your face smile;" (and) thus saying he repeated this stanza to (his) wife:

"(While) agreeing the birds go (away) carrying off the net, but when they quarrel they will then fall into my power."

When a short time had passed, one quail, descending on the pasture-ground, unawares trod on the head of another. The other was angry (and said), "Who trod on my head?" and although the first said, "Be not angry, I trod (on it) unawares," yet he was angry. They, again and again talking (together), quarrelled with each other, saying, "(It is) thou, I suppose, (that) liftest the net." While they were quarrelling, Bodhisatta thought, "For those who quarrel there is no safety, now they will not lift the net, then they will incur great destruction, the fowler will have a (good) chance. I cannot stay in this place (any longer)." So he took his retinue and went elsewhere. But the fowler, after a little while, came and counterfeited the cry of the quails, and when they had assembled he threw the net over (them). Then one quail said, "While lifting the net, the feathers on thy head fell off, now lift (it again)." Another said, "While lifting the net, thy wings on both sides dropped, now lift (it again)." Thus while they were saying, "Lift (the net again)," the fowler threw (his) net, and after uniting all in one (heap), and filling (his) bag, he went home and made (his) wife smile.

The Master (said), "Thus, O Emperor! the dispute of relatives is not becoming, dispute is the root of destruction; and) so (saying and) having given this moral instruction, he and up the Játaka by saying: "At that time the unwise

quail was Devadatta, but the wise quail I."—The Sammoda-mána-Birth.

NOTES ON JATAKA 33.

Nigrodha, Abhidhán. by Subhúti, vv. 551, 1042; in Sanscrit nyagrodha, ficus religiosa. In J. Lindley's "A Natural System of Botany," 2 Edit. p. 177, we read the following passage: "The celebrated banyan-tree of India is Ficus religiosa. Prince Maximilian, of Wied Neuwied, says that the colossal wild fig-trees are one of the most grateful presents of nature to hot countries; the shade of such a magnificent tree refreshes the traveller when he reposes under its incredibly wide-spreading branches, with their dark green shining foliage. The fig-trees of all hot countries have generally very thick trunks, with extremely strong boughs, and a prodigious crown." That cumbata means a wreath may be seen from J. 471, where we find the following passage: "sá tesam gatakále nánápuppháni gahetvá pupphacumbatakam katvá," etc. The word is still preserved in the Mahráthí, where cumbala or cumbhala means a circlet or ring of cloth, to be put on the head under a load to be carried; see Molesworth. Tiracchána (from tiracca + ana), an animal, Abhidhán. v. 648. Paccámitta, see "Five Játakas," p. 23. Vattaka, S. vartaka, a sort of quail, Wilson. Vassita, S. vácita, Abhidhan. v. 130. Madd, S. mard (mrd); see Böhtl. and Roth's S. W. Pacchi means, according to Abhidhan. v. 524. a basket. I am at a loss to find a corresponding Sanscrit word. In elucidation thereof, I quote the following passages, Játaka 78: mahájano pacchipasibbakádíni gahetvá gehadváre sannipati. J. 368: atíte Báránasiyam Brahmatte rajjam kárente Bodhisatto párápatayoniyam nibbattitvá Báránasi-setthino mahánase nílapacchiyam vasati. J. 381: kappásakhettato pacchipúram kappásam ádáya. J. 5: handa dáni tvam eva saláká dehíti salákápacchim adamsu. Vikkinitvá, one would expect vikkínitvá, but it is almost always written with a short i, so I dare not alter it. Mula, Abhidhan. vv. 471, 851. Jivikam, the MS. reads jivitam. Kappeti, from kapp, S. kalp (klrp), Clough, Páli Verbs, p. 4. Sakkhissati, the future tense of sak, S. çak; see "Five Ját." p. 27. Gumba, Abhidhán. vv. 550, 861, S. gulma for gumla; compare Páli amba = S. ámra, "Five Ját." p. 21. Upari jale khitte, so I have corrected in accordance with the above phrase: upari jále khittamatte; the MS. has jálamkhitte, perhaps it would also do to alter this only to jalakhitte. Punadivasato patthaya, etc., there must here be some corruption of the text. I suppose, as Prof. Westerg has suggested to me, that the words I

have put between brackets have been repeated by a mistake of the transcribers. Sammodamáná, rejoicing together, agreeing, living in harmony; compare Burnouf's Lotus, p. 316, where sammodamáno is explained by avivadamáno, not disputing, not quarrelling. In elucidation of these two verbs, I quote the following verses from J. 467:

Icc-eva phandano isam iso ca pana phandanam amñamamñam vivádena amñamamñam aghátayum. Evam eva manussesu vivádo yattha jáyati mayúranaccam naccanti yathá ne isaphandaná. Tam vo vadámi bhaddam vo, yávant' ettha samágatá sammodatha má vivadittha má hotha isaphandaná.

Sabbevádáya, I suppose, must be dissolved into sabbe eva ádáya, and therefore written sabbe vâdáya, as the commentary has te gahetvá. Ehinti, see Dhammapadam, p. 369. Katipáha, see "Five Ját." p. 26. Vvádake, I think the transcriber must here have made a mistake, and that we are to read: vivádakesu. Sotthi, see Dhpd. p. 363. Bhariyam hásayamáno, the MS. has hásamáno. Mahárája I suppose to be a mistake of the transcriber, instead of mahárájáno, as at the beginning of the Játaka. Anusandhim ghaṭetvá occurs often at the end of a story in the same connexion as here, but as yet I have not been able to make out the meaning of this phrase. I suppose, however, it means something like making application, bringing the story told to bear upon the then existing circumstances. Samodhánesi, see "Five Ját." p. 30.

#### 201. Kurungamigajátakam.

"Therefore the leathern trap." This the Master related, while living at Veluvana, in reference to Devadatta. For at that time the Master, having heard that Devadatta endeavoured to kill (him, said,) bhikkhus, not only now Devadatta endeavours to kill me, (but) also formerly he endeavoured (to do so, and) so having said he told a story:

In (times) past, while Brahmadatta reigned in Báránasí,

Bodhisatta, having become a Kurunga-deer, took up (his) abode in the wood, in a thicket not far from a lake. At the top of a tree not far from that lake sat a Woodpecker, and in the lake there lived a Tortoise. Thus those three companions lived pleasantly together. Then a Deer-hunter, roaming in the wood, having seen Bodhisatta's footmarks near a waterpool, (and) having placed a trap made of leather (thongs, and as strong) as an iron-chain, went (his way). Bodhisatta, having come to drink water, (and being) caught in the trap during the first watch (of the night), shrieked (frantically) as a prisoner. At his shriek the Woodpecker, coming down from the top of the tree, and the Tortoise out of the water, consulted (together, saying) what is to be done? Then the Woodpecker, addressing the Tortoise (said), "Friend, you have teeth, cut this trap; I will go and manage (it so) that he shall not come; thus by the efforts made by us two our companion will obtain life;" (and) explaining this matter (he) pronounced the first stanza:

"Therefore the leathern trap
 Out with thy teeth, O Tortoise!
 I will manage (it) so
 That the Hunter shall not come."

The Tortoise began to gnaw at the leather-thongs. The Woodpecker went to the village where the Hunter dwelt. The Hunter at dawn, having taken (his) hunting-knife, went out. The Bird, perceiving that he was about to go out. shrieked aloud, shaking (his) wings, and struck him in the face when he was going out at the front-door. The Hunter (said to himself), "I have been struck by a bird of bad omen," (and) so (saying) he returned, lay down a little (while), and then got up again and took (his) knife. (thought), "this (man) went out the first (time) by the frontdoor, now he will go out by the back-door," (and) seeing this he went and sat down at the back-door. But the Hunter thought, "when I went out by the front-door, I saw a bird of bad omen, now I will go out at the back-door," (and) so (thinking) he went out by the back-door. The Bird again shrieking aloud went and struck (him) in the face. The

Hunter, again struck by the bird of bad omen, (thought), "this (bird) will not allow me to go out," (and) so returning he lav down until daybreak, and (then) at the dawn of morning took (his) knife and went out. The Bird went away hastily, and told Bodhisatta that the Hunter was coming. At this moment, with the exception of one thong, the other thongs had been cut by the Tortoise. But his teeth looked as if they were going to fall out, (and his) mouth was soiled with blood. Bodhisatta, seeing that the Hunter had taken (his) knife, and was coming on with the speed of lightning, burst that thong and entered the wood. The Bird (now) set himself on the top of a tree. But the Tortoise from weakness lay down there. The Hunter, after throwing the Tortoise into (his) bag, fastened (it) to a post. Bodhisatta, on (his) return, seeing (what had taken place) and knowing that the Tortoise had been caught (thought), "I will preserve (my) companion's life," (and) so, feigning to be weak, he appeared before the Hunter. He (thought), "this (deer) must be weak, I will kill him," (and) so, taking (his) knife, he followed (him). Bodhisatta, neither going very far (away) nor very near, entered the wood, taking him (with him). (But) when he knew that he had gone a great distance he changed his pace and went (back) with the rapidity of the wind another way, (and) when he had thrown up the bag into the air, with (his) horn, and let it fall and be torn on the ground, he drew out the Tortoise. The Woodpecker descended from the tree. (Then) Bodhisatta said admonishingly to the two (others), "I got life through you; by you has been done unto me what ought to be done to a companion; now when the Hunter comes he will seize you, therefore, friend Woodpecker! take your children and go to another (place), and you, friend Tortoise! go into the water." They did so. The Master having become enlightened, pronounced the second stanza:

"The Tortoise went into the water,
 The Deer entered the wood,
 The Woodpecker from the top of the tree
 Carried (his) children far away."

13

The Hunter coming (back) to that place, (and) not seeing any one, took (his) torn sack and went to his house, seized with distress. The three companions, on the other hand, without breaking off (their mutual) confidence during life, (at last) passed (away) according to (their) deeds.

The Master having given this moral instruction, wound up the Játaka thus: "At that time the Hunter was Devadatta, the Woodpecker Sáriputta, the Tortoise Moggallána, but the Kurunga-deer (was) myself." The Kurungadeer-Birth.

#### NOTES ON JATAKA 201.

Ingha, see Abhidhán. v. 1157 (codane) and Clough's Pali Gram. p. 72. Vaddha, S. vardhra. Parisakkati, compare Dhammapadam p. 331. Kurunga, S. kuranga. Gumba, see note on Ját. 33. Satapatta, S. catapatra. Luddaka, see Five Ját. p. 38. Padavalanja I think to be the correctest form of this word, but it is sometimes written padavalanja, compare Preface to Dhpd. p. viii.; in this place B has valanca, and C valancha. I consider valanja identical with S. vyanja-na. Nigala, S. nigada, Abhidhan. v. 364. Oddetvá, I am not sure to which Sanscrit root this verb is to be referred, but I suppose it is connected with yaud; it seems to mean: to construct or to place. Baddha, bound, or can it mean: strong, vehement? Samma, see Five Ját. p. 37. Atthi, see Dhpd. p. 259. Ehiti, see Dhpd. p. 369. Paccusa, S. pratyúsa. Satti, Abhidhán. vv. 392, 394, 1050 S. cakti. Vassitvá, Gerund of vás, S. vác. Pappothetvá, Gerund of puth, S. sphut; B reads pappotetvá. Khádita, Pañcatantra (Kosegarten p. 144, 14), has khandita. Baddha, S. badhra; B reads bandhanam. Pasibbaka, see Dhpd. p. 268, and Böhtl. and Roth's S. W. Khánu means, according to Clough's Singh. Dict., the trunk of a lopped tree; a pillar, a post; compare khánumá, having pillars, Clough's Pali Gram. p. 24. Khánuka is sometimes written khánuka; I cannot trace the word in Sanscrit. Laggesi, see Five Ját. p. 37. Anubandh. see Böhtl. and Roth's S. W. Padam vañcetvá is a strange expression, which I don't quite understand. Ováda, Abhidhán. v. 354; S. avaváda or apaváda. Tvam hi, so both MSS., but I suppose hi is a corruption for pi.

ART. II.—On an Ancient Buddhist Inscription at Keu-yung kwan, in North China. By A. WYLIE.

Travellers from the city of Peking to the town of Kalgan on the great wall of China, must make the journey by the rugged defile known as the Nankow Pass. Five miles north of the entrance, where the village of Nankow stands, is the smaller village of Keu-yung kwan. Fortifications there run up the steep slopes of the mountains on both sides of the valley; and besides arched gateways at the two ends of the village, the highway passes under a limestone archway of a much more striking appearance. This is covered with mythological and symbolic sculptures of obviously Indian origin. The tradition of the natives in the neighbourhood asserts it to have been the basement story of a pagoda which stood there; and the name by which it is still designated, 過 街 塔 Kwo keae t'a, "Pagoda crossing the street," bears out the statement. We are told that this pagoda, though erected for the benefit of the locality, proved an object of such terror to the superstitious Mongols, coming south from their native wilds, that they could not be induced to pass under the ominous-looking structure; and thus it was found necessary in the early part of the Ming dynasty, to remove the upper stories of the erection; the policy of the government being to conciliate and attract these wild nomades.

Keu-yung kwan was once a place of much greater pretension and importance than it is at present; and it can boast of historical memories of considerable interest; not the least being the fact that there Genghis khan was successfully resisted in his attempts to force the pass.

Several Europeans who have passed that way, have noticed the village and the archway, in recounting their travels. Father Gerbillon, who was there on his way to Mongolia in 1688, says—"The village might pass for a little town. The gate by which it is entered is very like a triumphal arch. It is all marble, and about thirty feet thick, with figures in half relief up to the spring of the arch."1 The same father, returning that way in the suite of the emperor in 1697, remarks:-"The heir apparent, accompanied by five of his brothers, and some magnates of the empire who had remained at Peking, came to meet the emperor in the middle of the Pass, in a village, named Kiu yun quan, where they remained some time."2 Bell of Antermony, who accompanied the Russian embassy to Peking in 1720, speaks of it as the town of Zulin guang, where he says they passed the night of November 15th.3 Timkowski, who headed a similar embassy in 1820, speaks thus of the place:--"Here the road begins to be very difficult, especially for carriages, and does not change for a distance of about five verst, as far as the fort of Kiu young (kouan), the principal defence of this passage. The interior of the middle gate is ornamented with figures of heros sculptured on the walls."4

None of the preceding writers however, nor others who had been there, seem to have thought it worth while to direct attention to the inscription which is found on this archway; and the first notice of it brought before the European public, so far as I am aware, was in a paper by myself, published in the Journal of the Royal Asiatic Society for 1860.<sup>5</sup> I had found it registered in a Chinese work on stone inscriptions, published towards the close of last century.<sup>6</sup>

While on my return from England to China, via Siberia and Mongolia, in 1863, I first saw this arch. At that time

7 The Rev. J. Edkins, of Peking, in anticipation of my arrival,

<sup>·</sup> 潛研堂金石文跋尾續 Tsēen yen t'ang kin shih wan pa wei süh. "Supplement to the Tsëen-yen Hall metal and stone inscription appendices," by Tsëên Tá-hin.

I could only succeed in getting an impression on paper of a portion of the inscription on the west side of the archway; which was exhibited at the first meeting of the North-China Branch of the Royal Asiatic Society at Shanghae, in 1864. A short paper on the same was published in the Society's Journal for that year.<sup>1</sup>

had come to the Mongolian plateau to meet me, but being a fortnight too early, he left a note for me at Kalgan, which, however, I never received. In that note he called my attention to the inscrip-

tion on the arch, which he had observed in passing.

An engraving of the arch has recently been published by Professor Pumpelly, who saw it in the spring of 1863. In his new work, "Across America and Asia," he thus describes the place:- "The next morning, leaving the plain, we entered the narrow valley, winding for several miles through a desolate gorge, enclosed by lofty walls and yellow cliffs of limestone. The mountain torrent, which at certain seasons dashes wildly through the valley, makes the construction of a durable road almost impossible, and it was only with difficulty, and with faith in the sure feet of our horses, that we managed slowly to pick our way through the long and narrow valley of sharp-edged boulders and masses of fallen rock. After several miles of this work we came to a point where the remains of an ancient road rising some distance above the bed of the valley was preserved along the mountain side. Ascending this by a long flight of steps, of highly polished blocks of limestone, granite, and porphyry, we passed through a gateway in an inner branch of the great wall, and came soon after to a beautiful white marble arch built during the Chin dynasty. This structure is remarkable from the fact that while its blocks are cut for a circular arch, the inner surfaces are hewn to produce a ceiling of semi-hexagonal form. It is interesting also to the student of the Chinese language, from the fact that the interior contains inscriptions in an ancient Chinese character. As Dr. Pogojeff wished to photograph this monument, we remained here till the next day, etc."

In the Chinese Recorder and Missionary Journal, vol. ii. p. 190, are the following remarks in the journal of a missionary lady who lately passed Keu-yung kwan on her way to Kalgan:—"The inner line of the great wall is at the entrance to the Nankho, and three or four branches cross it. We passed through ten gateways. These are double, as is customary with cities. The wall is dilapidated in some places, but the gateways are all solidly built, and in good repair. One was very fine, having much carved work, and inscriptions in six different languages. One of these European scholars

cannot read."

<sup>&</sup>lt;sup>1</sup> Journal of the North-China Branch of the Royal Asiatic Society, New series, No. 1, pp. 133-136.

As there stated, the inscription is engraved in the characters of six different nations, and covers the greater part of the inner facing of the structure on both sides, from the basement to the spring of the arch. Two of the parts are inscribed in horizontal lines at the top, in antique Devanagari and Tibetan characters respectively, twenty feet long on each wall. Below these are four compartments inscribed respectively in Mongol, Ouigour, Neuchih and Chinese characters, all in vertical lines.

In the spring of 1867, when on a visit to the north of China, I succeeded in completing my impression of the four last-named parts of the inscription, but could not get the Sanscrit and Tibetan portions, on account of their great height from the ground. At a subsequent period, however, these were procured by Mr. Edkins, and he has kindly sent me a hand tracing by a Chinese, from his impression.

It will be seen that the great interest of this inscription is the large and correct specimen it offers of the Neuchih character, the national writing of the Kin dynasty Tartars, the knowledge of which is now absolutely lost in China, and very few specimens are known to exist or to be accessible.

The great age of this piece of art however,—more than five centuries,—taken into consideration, it is not surprising that it has suffered much from various causes; large portions of the stone have dropped out in many places; the surface, especially towards the base, is much chipped and defaced, and in some places the characters have become so filled up with hard matter, as scarcely to give any legible impression on the paper. The numerous lacunæ thus produced form the chief difficulty in the decipherment.

A slight comparison of the different parts was sufficient to show that they were all transcripts of a Sanscrit original. On the eastern wall the correspondence for the greater part is tolerably close throughout. That on the western side is much less regular, no one version being the exact counterpart of any other, gaps and redundancies occurring in many places, especially in the latter part.

The present paper then will be occupied specially with the

eastern side of the archway, leaving the opposite one as a subject for future investigation; as I find each side is com-

plete in itself.

Outside the original inscription, there is an intimation in smaller Chinese characters, on the right-hand border, towards the top, to the effect that the structure was "repaired with funds given by the meritorious and believing official Lin P'oo-heen, on the 15th day of the 5th month of the year 1445." It is to be noticed, that this is exactly a century after the date of the original inscription, 1345, which by a singular accident is preserved, in a line where little else is legible.

As the Chinese characters were more easily intelligible to me than any of the others, and consequently promised the readiest key to the mystery, I naturally turned to that part of the inscription first. Unfortunately I found it specially faulty and illegible; and it was necessary to supply large lacunæ by analogy, and with the aid derivable from the transcripts in the other characters. There are twenty-one columns of large characters, which are succeeded by twenty columns of a smaller size; and with the exception of the Sanscrit, which consists entirely of large characters, all the other compartments have, like the Chinese, part in large characters and part in small. Of the large character portion. which it was at once obvious was a mere transcript of Sanscrit sounds, I have lately found another rendering in a Chinese ritual, the 禪門日誦 Shen mun jih sung, "Daily recitations of the Shen sect;" in which it is spelt out with a set of characters differing almost entirely from those on the inscription; so that it is only by the phonetic approximation that the identity can be detected. The title of the piece, as given in the ritual,—but omitted in the inscription,—is 佛頂尊勝大陀羅尼 Füh ting tsun shing ta to lo ne. "Great dharani of the honoured diadem on Buddha's cranium."2 It may be remarked that in every instance where a

Mr. Edkins identifies the Shen sect with the Jains of India.

In another ritual, the 输 伽图口 Yu kea yen kow, "Flaming mouths of the Yoga," in the possession of W. Lockhart,

compound character is used in the Sanscrit,—and such instances are very numerous,—the same is expressed by two Chinese characters in the column, followed by two smaller ones, — Aurh hö, "two combined," placed horizontally. This practice is invariable, both in the inscription and in the ritual. The copy in the ritual is marked off by stops, into words or clauses throughout. By the discovery of this duplicate, I have been enabled to fill up the gaps in the Chinese part of the inscription almost without the chance of error.

Having ascertained that all the different portions were transcripts or transliterations of a Sanscrit original, the importance of restoring and analyzing this original was apparent; and for this purpose I have turned to account the tracing sent to me by Mr. Edkins. This consists of five horizontal lines of characters, each two inches in depth and twenty feet in length. Besides being in an obsolete form of the Devanagari, the Chinese copyist, as might be expected, has made numerous errors in his endeavours to extricate the complex characters from the half-obliterated legend on the stone. So great was the confusion thus produced, that it would have been hopeless for any but a Sanscrit scholar to have succeeded in restoring the half-obscured forms. At this stage I was under obligation to Dr. E. Haas, of the British' Museum, who kindly identified the greater number of the characters for me. Having this clue to start with, by a comparison of the several transcripts, I was able to make an approximate restoration of the whole, and wrote out the same in English letters. Being in Göttingen shortly after, I showed this transcript to Professor Benfey, who readily gave me a partial translation, and pointed out many errors in the proposed restoration; although a failure of eyesight, from which he was at the time suffering, prevented him entering so minutely into the details, as he otherwise would willingly have done. These hints however put me in the way of

Esq., the same is given with the abbreviated title 尊 膀 咒 Tsun shing chow, "Prayer to the honoured diadem."

making numerous corrections; and after repeated amendments, in which Dr. Haas has taken much trouble to assist me, I am indebted to that gentleman for a complete and independent translation of the whole; which is subjoined here after the phonetic transcript. A few places, and only a few, have persistently refused to submit to the rigour of grammatical laws; and it is not surprising, in the case of a dead language being traditionally preserved for centuries among a people by whom it is not understood, that a few errors should creep in. It is rather to be wondered at, and indicates a remarkable veneration for the sounds of the sacred language, that the text as preserved should be able to give out such a complete and intelligible meaning.

#### TRANSLITERATION 1

Om namo bhagavate sarvatrailokyaprativisishtäya buddhäya te namah tadyatha om bhur om bhur om sodhaya sodhaya visodhaya visodhayasama samantavabhasavarana gatigaganasvabhavavişuddhe abhishinchen² tu mâm sarvatathûgata sugata varavachanâmritâbhishekair mahâmudrâ<sup>3</sup> mantrapadaih âhara dhara mamâyuh santârani sodhaya sodhaya visodhaya visodhaya gaganasvabhâvavisuddhe ushnîshavijayaparişuddhe sahasraraşmisamchodite sarvatathâgatâvalokini shatpâramitâparipûrani sarvatathâgatamatidasabhûmipratishthite sarvatathagatahridayadhishthanadhishthite mudre mudre mahâmu*drevajrakā* ya*sam*hatanaparisuddhe sarvakarmāvaraņavisuddhe pratinivartaya mamayuh visuddhe sarvatathagatasamayddhishthdnadhishthite om muni muni mahamuni vimuni vimuni mahavimuni.4 mati mati mahâmati mamati sumatitathâtâbhûte koṭiparisuddhe visbutabuddhisuddhe he he jaya jaya vijaya vijaya samara

<sup>2</sup> Dr. Haas corrects this to abhishinches.

3 Dr. Haas adds m here.

5 Dr. Haas thinks this word should be mahamati.

<sup>&</sup>lt;sup>1</sup> The italics represent the restorations, which are illegible in the Sanscrit.

<sup>4</sup> Dr. Haas thinks the inscription is in error here, and that the preceding six words should end in ne instead of ni.

<sup>&</sup>lt;sup>5</sup> I understand that sbu is an impossible combination in Sanscrit; and although the Sanscrit character is missing on the stone, yet the several transcripts in the other characters are so distinct that I do not feel at liberty to abandon it. Dr. Haas suggests visvatah, or more correctly visvato.

#### TRANSLATION.

Om!6 adoration to the holy Buddha, who art exalted above all the three worlds,—adoration to thee!—which is equivalent to Om. Bhûr om, bhûr om; Purify, purify, completely purify, com-

<sup>1</sup> Dr. Haas proposes to correct this to mahamudre.

<sup>2</sup> The canons of Sanscrit orthography would require these two words to be combined thus—trailokyádhishthite.

3 Da here seems to be redundant.

<sup>4</sup> This word is doubtful. Dr. Haas suggests bhûyishtha.

<sup>5</sup> Dr. Haas corrects this to vajrapane.

<sup>6</sup> Om is the mystic name of deity among the Hindus, and generally forms the commencement of a prayer.—Klaproth. Fragmens

Bouddhiques, p. 30.

"I originally suggested bhur bhuvah svar, the so-called three vydhritis or mystical syllables pronounced before every daily prayer, but am forced to believe that we have here to read bhur om, bhur om, bhur om. True, I have never read bhur alone as an exclamation, but always the whole triumvirate together, which is very natural if their allegorical meaning is 'the three worlds, Earth, Atmosphere, and Heaven.' Still in this place all the different transcripts seem clearly to point towards bhur om. The Sanscrit character for it (in the Yu kea yen ków) is unique, and could never be read for two syllables, although it contains enough of the dif-

pletely purify, oh thou incomparable one, who embracest all space, and whose splendour has appropriated the sphere of knowledge!thou Sugata1 of all the Tathagatas,2 whose speech is blessing, and who art immortal, consecrate me by sprinkling me with holy water, and [consecrate] the great Mudrâ3 with the words of mystic prayers! Give, give me old age, oh protector! purify, purify, completely purify, completely purify, thou who art purified by appropriating the celestial sphere; -who art completely purified by the all-powerful Ushnisha,4—illumined by a thousand rays, and looking on all the Tathagatas, -accomplishing the six perfections, standing upon the ten regions embracing the knowledge of all the Tathâgatas,-placed on the sure ground of the hearts of all the Tathâgatas,-oh Mudrâ, Mudrâ, great Mudrâ, whose body is pure as the body of a thunderbolt, --purified by embracing all good actions!-renew my life, oh thou pure one, who standest on the ordinances of all the Tathagatas. Om! oh sage, sage, great sage!-exalted sage, exalted sage, thou great exalted sage !- oh Mati,5 Mati, great Mati, thou Mamati, who hast entered the real state of sound knowledge, - purified to the utmost limit, - purified by allembracing knowledge! - oh victory, victory, universal victory, universal victory! - oh battle, battle! - Sabhara, Sabharaya, Sabharaya !6-[oh Mudra] standing upon the ground of all the Buddhas together !-- oh purification !-- oh knowledge !-- oh Vajra,7 Vajra, thou great Vajra, Suvajra,8 bearing the thunderbolt in thy womb,—bearing victory in thy womb,—bearing signal victory in

ferent elements [  $\mathfrak{A}$  om,  $\mathfrak{A}$  bhu or  $\mathfrak{A}$  bhû,  $\mathfrak{T}$  r to be considered a sort of monogram. The principle, however, is quite new to me, as I never met with an instance of it in manuscripts." (Dr. Haas.)

<sup>1</sup> Lit. "The welcome one," a title of Buddha.—Burnouf. Introduction à l'histoire du Boudhisme Indien, p. 77.

<sup>2</sup> Lit. "Come in like manner," a generic designation of Buddha.

-Ibrd. p. 76.

8 Lit. "Seal," a personification of certain Buddhist signs made

with the fingers.—Vassilief. Le Bouddisme, p. 143.

4 The Ushnisha is generally understood to be an excrescence on the skull. The word also means "a turban," "the curly hair with which Buddha was born," and "the hair on the head tied in a knot."

—Burnouf. Le Lotus de la bonne loi, p. 558.

5 Lit. "Mind," a personified attribute.

<sup>6</sup> It is impossible to get any sense out of these ejaculations.

Lit. "Thunderbolt," a personification.

<sup>8</sup> A modified form of Vajra.

thy womb,—bearing the thunderbolt and lightning in thy womb,—who hast received thy existence from the thunderbolt,—who art originated in the thunderbolt !—oh Vajra,—endowed with the thunderbolt,—may my body be a thunderbolt, and may the purification of the same extend over all its essential qualities !—may there also be purification of all knowledge,—and may all the Tathâgatas take up their abode in me !—With all knowledge and all perfection, ever teach, ever instruct, ever deliver, ever save, ever purify, and ever sanctify me ! Deliver, oh deliver, all living creatures, thou who art purified by effulgence of light,—placed on the sure ground of all the Tathâgatas,—oh Mudrâ, Mudrâ, great Mudrâ, great Mudrâ, —with the words of mystic prayers! Svaha.¹

Adoration to the Ushnisha of all the Tathâgatas!—[oh Mudrâ] ruling over the three worlds, and founded upon the hearts of all the Tathâgatas! svāhā. Adoration to the sacred Ushnisha!—adoration to Bhagavat!2—thou purified, supremely purified [Mudrâ]!—oh thou who bestowest unlimited age! svāhā. Oh thou most eminent, the Lord of the universe ((lokanātha)!—lam\* svāhā. Oh seal of Maitreya!3 svāhā. Oh Gaganaganja!4 gam\* svāhā. Oh Samantabhadra!5 sam\* svāhā. Oh Vajrapani!6 vam\* svāhā. Oh Manjusri!7 mam\* svāhā. Oh Sarvanivaranavishkambhin!8 sam\* svāhā. Oh Kshitigarbha!9 kshim\* svāhā. Om sri.

A good deal has been said about dhâranis, by writers on Buddhism, and it would be out of place here to enter on

<sup>2</sup> Lit. "The Fortunate," a title of Buddha. — Schlagintweit. Buddhism in Tibet, p. 4.

3 Name of the future Buddha.

<sup>4</sup> Name of a Bodhisattva.

<sup>5</sup> Ditto.—Vassilief. Le Bouddisme, p. 267.

<sup>6</sup> The subduer of evil spirits.—Schlagintweit. Buddhism in Tibet, p. 114.

<sup>7</sup> The god of wisdom.—Ibid, p. 65.

<sup>8</sup> Name of a Bodhisattva.

9 Ditto.

\* "These syllables have no sense in themselves, and are merely repetitions of the first syllable of the name invoked in each phrase, with a nasal sound affixed to it. Perhaps it means that a stop is to be made for meditation on the particular merits of each Bodhisattva. But it may also be an abbreviation, indicative of the repetition of the whole formula." (Dr. Hass.)

<sup>&</sup>lt;sup>1</sup> Svåhå is generally left untranslated. Its use is analogous to "Amen."

the mysteries of that abstruse subject. Suffice it to say that, according to the general definition, they are certain mystical formulæ, supposed to carry with them a magical influence in the recitation, and this influence is not simply dependent on their utterance as a whole, but is supposed to be inherent in the single words, and even in the separate letters of the forms. In a system where all the objects of sense are but so many ideas in a world of unreality, words constitute not merely names, but the actual essence of the things named; and the possession of the name is consequently the possession of the object. This may account for the incoherent and almost meaningless ejaculations observable throughout the inscription; and it is but a refinement of the same notion to attribute a similar virtue to the elements of which the words are made up. From words and letters, the same occult efficacy was transferred to symbols made by a particular placing of the fingers, which is called mudra, or "the seal," and this appears to be personified here as an object of adoration.1

The above translation seems to be tolerably near the meaning of the text; and although after every effort at reconstruction, a few grammatical solecisms still remain, yet I believe there are very few places now, where the original syllables are not correctly restored. It is indeed interesting to have an exact interpretation of the text; but the main thing for our present purpose, is to identify the vocables without error; and when once assured of the powers of the Sanscrit characters, we can proceed with confidence to the analysis and restoration of the several transliterations.

The dhârani concludes near the end of the fourth line on the stone, thus:—"with the words of mystic prayers (mantra). Svâhâ." The doxology that follows is only found in one of the transliterations. From the remarks of Burnouf on the subject, I am inclined to think that this concluding piece is the mantra alluded to in the final sentence of the dhârani.

<sup>2</sup> Introduction à l'histoire du Bouddisme Indien, p. 540.

<sup>&</sup>lt;sup>1</sup> See Vassilief's "Le Bouddisme," translated by La Comme, p. 141, passim.

It may be remarked that the invocation Om bhûr om svâhâ, by which the Chinese and three of the others commence, is omitted in the Sanscrit.

Immediately below the Sanscrit text is the transcript in three horizontal lines of Tibetan characters, below which are four lines of Tibetan in smaller characters. The Tibetan character being a direct derivative from the Devanagari,1 it might be expected that this would prove the most important of the transcripts for identifying the original text. Unfortunately however, the breaks in the face of the stone are so extensive, that not much more than half of the writing is preserved; and the indistinctness of that, probably, has led the copyist into so many errors and omissions, that the tracing serves for little more than mere hints; but it may in great part be corrected by the other transcripts. This contains the introductory invocation Om bhûr om svâhâ, and the dhârani occupies about two lines and a third; the remaining portion being totally different from the Sanscrit, though it is evidently Sanscrit also.

The first of the vertical portions below the preceding, beginning from the left hand, is in that form of the Mongol known as the Båshpah<sup>2</sup> alphabet. This consists of twenty lines in large characters, the lines succeeding from left to right; which are followed by eight lines of Mongolian in a smaller character. The transcript commences with the invocation Om bhûr om svâhâ, and contains the whole of the

dhārani, but nothing additional.

Although the history of this alphabet and writing is dis-

<sup>1</sup> The Tibetan characters were invented by Thumi Sambhota, the Prime Minister of Srongtsan Gampo, King of Tibet, from the Devanagari alphabet, about the middle of the seventh century.—Schlagintweit. Buddhism in Tibet, p. 65.

This is a Sanscrit name **氧TU**: Báshpah, which is transferred into Chinese by the characters 人思巴Pa-sze-pa and 帕克斯巴Pa-kih-sze-pa. Pallas writes the name Pagba. Remusat gives it Phaspa, Paspa, Bâschpah, and Pa-sse-pa, in different places of his Recherches sur les langues Tartares. Klaproth uses Bhâchbah, as the Tibetan transcript of the original Sanscrit. Pauthier uses Passe-pa.

tinctly related in the Chinese annals, yet its actual existence seems, up to a very recent period, to have been a matter of doubt with European writers.

Chinese history tells us that the emperor Kubla commissioned the Tibetan lama Bâshpah to construct an alphabet or syllabary specially adapted to the Mongol language. His task was completed, and the alphabet initiated for public use by an imperial decree in 1269. Schools for the study of this character were also instituted the same year. Several notices on record lead us to believe that the Chinese never took willingly to the use of this alphabet; but there is no doubt it was the official writing during the Yuen dynasty; and it appears to be the one known as the Mongolian character in the Chinese records of that period.

Pallas gives the same account of Båshpah's invention,¹ derived apparently from a Mongol source; and the last plate in his work contains what he calls a specimen of Båshpah's square character,² but he does not tell us where he got it. That plate has been repeatedly quoted as the first specimen of Båshpah's alphabet published in Europe; but I am very doubtful if Båshpah had anything to do with the character there given,³ or if Pallas had ever seen the writing invented

<sup>2</sup> Ibid. vol. ii. plate 22.

####

ri ri li li kr

Subsequently, when I saw Pallas' work for the first time, I was surprised to find my copy almost identical with his plate, except

<sup>&</sup>lt;sup>1</sup> Sammlungen historischer Nachrichten über die Mongolischen Völkerschaften, vol. ii. p. 358.

<sup>&</sup>lt;sup>3</sup> When on a visit to the great lamasary Yung-ho-kung, in Peking, I observed in one of the temples a pall inscribed in the common Tibetan character, with a horizontal heading in a character which was unknown to me. I thought it of sufficient interest to take a copy of it, which I give here:—

by that celebrated lama; for it will be observed that all the known examples resemble much more closely the common Tibetan character, than does that of Pallas, which is evidently a modification of the Scharr form.

In the Appendix to Courtin's "Encyclopédie Moderne," Klaproth, in an article on "Grammaire générale," gives an alphabet which he calls "Square Landsha," being nearer in resemblance to Bâshpah's than the preceding; but though some have taken it to be identical with his invention, I do not believe there is any direct connection between the two.

Schmidt seems to ignore the existence of a separate alphabet under the name of Bâshpah, as having been ever used

among the Mongols.2

Remusat says this alphabet was never used out of Tibet, notwithstanding the reiterated orders of the emperors.<sup>3</sup> He promises to give an exemplar of the alphabet in his second volume, from the Suh hung keen luh, together with some explanatory details; but the second volume never appeared. Never having seen an instance of the employment of this character, he seems to have been unable to divest himself of the idea, that the invention of Bâshpah was nothing more than the application to the Mongolian language, of the common characters used by the Tibetans at the present day. That hypothesis however is totally refuted by the present inscription, where we have the Tibetan portion in the identical character used by that people now, and the Mongol portion in the Bâshpah character.

Klaproth, while arguing for this writing having been used in China, says there are a great many medals of Kubla khan in existence, of which the legend is entirely or in part in the

that he gives an additional portion at the beginning and end; but he gives no explanation of what are the characters. I conclude, from examination, that they are simply the alphabet, and have identified the greater number with tolerable probability; believing that the additional ones given by Pallas are compounds.

1 Plate 7.

<sup>3</sup> Recherches sur les langues Tartares, p. 193.

<sup>&</sup>lt;sup>2</sup> Forschungen im Gebiete der älteren religiösen, politischen, und literarischen Bildungsgeschichte der Völker Mittel Asiens.

square characters.¹ These seem to be the only evidence that he was able to adduce of the use of this character in China. While I think it very doubtful however, whether there be any such medals of the reign of Kubla, it is very easy to understand how Klaproth should have been led into such a mistake. I have never seen any, or a description of any in Chinese books on medals; but I have a number of coins in the Bâshpah character, dating at various periods from 1308 to 1354.

I have seen several stone slabs inscribed with this character, and notices of a good many more, the present one dating so late as 1345. In 1307, it is recorded that Polo Timor, a high dignitary, presented to the emperor a copy of the Heaou king, or "Book of Filial piety," written in the Bashpah character, which the monarch ordered to be printed and circulated. am only aware of one little book in that character having survived to the present day, i.e. the Pih kea sing, or "Book of Surnames," which has been preserved by being reprinted in the King chuen pae peen, a work in 120 books, published in 1581, consisting of extracts from other works on every class of subjects. The eighty-first book is occupied exclusively with the reprint of the Pih kea sing; but so unmercifully mutilated are the characters, that without the Chinese key, it would have been an utter impossibility to have deciphered them. These facts then leave little doubt that this character was used to a considerable extent in China, till near the end of the Yuen dynasty.

In 1838, H. Conon von Gabelentz published the first specimen in Europe, of the actual employment of the character.<sup>2</sup> This was an inscription in the Mongolian language, which he had extracted from a reprint of the Shih mih tseuen hwa, a Chinese work on lapidary inscriptions, first published in 1618.

A silver plate with a gilt inscription in this same character, was found in 1846, in the district of Minusinsk and govern-

<sup>1</sup> Mémoires relatifs à l'Asie, tome ii.

<sup>&</sup>lt;sup>2</sup> Zeitschrift für die Kunde des Morgenlandes, vol. ii. p. 1, etc.

ment of Jenissei, in Eastern Siberia. This was deposited in the Asiatic Museum of the Academy of Sciences at Petersburg; and gave rise to a protracted controversy in various periodicals between Messrs. Habakkuk, Grigorief, Hyacinth, Schmidt, Schott, and Banzarof. Mr. Grigorief published a facsimile and an essay on the subject, in the Journal of the Administration of the Interior.<sup>1</sup>

An edict in honour of Confucius published by the emperor Woo-tsung on his accession in 1307, was engraved in the Chinese language, and in the Chinese and Båshpah Mongol characters. An impression of the same is preserved in the Asiatic Museum at Petersburg, and a copy of it was given by Father Hyacinth in his work on the statistics of the Chinese empire.<sup>2</sup>

In 1853, another silver plate, with an inscription similar to the preceding, was discovered at Verchni Udinsk, to the east of Lake Baikal; and is now preserved in the Hermitage Palace in Petersburg. An account of this was given by Mr. Savélief in the fifth volume of the Transactions of the Archæological Society at Petersburg.<sup>3</sup> These plates seem to have been signets given to military envoys, and those holding imperial commissions.

In an article on Sanscrit and Mongolian characters by Mr. Edkins, published in 1855,<sup>4</sup> he has given a facsimile reproduction of the *Pih kea sing*, from the *King chuen pae peen*.

Without knowing anything of what had been done by Von Gabelentz and the Russian orientalists, I chanced one day during the occupation of Shanghae city by the Triad rebels in 1854, to notice in the Confucian temple, an inscription in this character,<sup>5</sup> which proved to be a transcript

<sup>&</sup>lt;sup>1</sup> Journal Asiatique, 5e serie, pp. 527-558.

<sup>&</sup>lt;sup>2</sup> Ibid. p. 526.

<sup>&</sup>lt;sup>3</sup> Ibid. pp. 527-558.

<sup>&</sup>lt;sup>4</sup> Transactions of the China Branch of the Royal Asiatic Society, part v. pp. 101-108 and 5 plates.

<sup>&</sup>lt;sup>5</sup> The Confucian temple was afterwards burnt down, and this slab was broken and otherwise injured by the fire. When Shanghae was retaken by the imperialists, the temple was rebuilt in another part of the city, and most of the old tablets found a place in the

of an edict by Kubla khan, the Chinese original of which was engraved below it. At some risk and trouble I procured a few impressions from this stone, and sent one of them, through Sir John Bowring, to the Royal Asiatic Society in London, where it still remains. A short article on the subject, by myself, appeared in the "Transactions of the China Branch of the Royal Asiatic Society," for 1855, giving a copy of the inscription in the Mongol and Chinese characters, and also cuts of several coins of the Yuen dynasty. There is also a restoration of the commencement of the Pih kea sing noticed above.

In 1860, M. Pauthier gave a French translation of the inscription which I had published in the Hongkong Transactions. This appeared in the Journal Asiatique,<sup>3</sup> together with some interesting details on the Bâshpah alphabet.

The same year a very neat fount of type for this character was cast at the Imprimerie Impériale at Paris, under the instructions of M. Pauthier.

An article which I had written on the Mongolian inscrip-

new erection. This place was afterwards used as a lodging for the British officers during the military occupation of that city; and in their little arrangements to make things comfortable, all the inscribed tablets in the walls had been covered with plaster and whitewash. The Mongolian slab I could never find again, and on a visit to the place in company with Dr. Lamprey, he told me he had seen the stone in question used as a block for chopping on.

<sup>1</sup> Part v. pp. 65-81.

<sup>&</sup>lt;sup>2</sup> I may be allowed here to notice some confusion that has taken place in the printing of that article. The cut of the coin to note || on page 55 is erroneously placed as note \* on page 58. The note marked || at the foot of page 55 should be referred to the word Pth, in the third line of page 56. The Mongol letter p, placed on its side, thus , on page 64, should be . The four Mongol characters at the top of page 65 are upside down. Engravings of some of these coins may be seen in an article by C. B. Hillier, on "Chinese Coinage," in the Transactions of the China Branch of the Royal Asiatic Society, part ii., 1848-50, pp. 105-110; also in the works of De Chaudoir, Endlicher, and others, on Chinese numismatics. A special article by Pauthier, on one of these coins, appeared in the Journal Asiatique, 5<sup>me.</sup> serie, tom. xv. pp. 321-337, 1860.

<sup>&</sup>lt;sup>3</sup> Vol. xix. pp. 5-47.

tion, translated and published by Von Gabelentz, in the "Zeitschrift," was translated into French by M. Pauthier, and appeared in the Journal Asiatique for 1862.

Both this inscription and the edict of Kubla were reproduced with the new type, in the Appendix to Pauthier's

splendid edition of Marco Polo.

The vertical portion to the right of the Mongol is in the Ouigour character, consisting of twenty lines in a large type and twelve in a smaller. The large character part corresponds almost literally throughout with the Sanscrit. There is no initial invocation, and the doxology at the end of the dharani is a transcript of the Sanscrit, with one slight deviation.

The Ouigour branch of the Turkish race seem to have been in close proximity and intercourse with the Mongols during the Yuen dynasty. They are reported to have been in possession of an alphabet and literature from an unknown antiquity; and scholars are divided in their opinions as to the origin of their written character. The Syriac,<sup>2</sup> the Sabæan,<sup>3</sup> and the Zend,<sup>4</sup> have each been proposed as the most probable source whence derived. The earliest mention of Ouigour literature is to be found in the Chinese records, about the middle of the fifth century, at which time we are informed, that they possessed in their language Maou's "Book of Odes," the "Confucian Analects," and the "Book of Filial piety," besides some Poets and Historians.<sup>5</sup>

In giving an analysis of a catalogue of Buddhist works, published in China in 1306, Professor Julien makes the following interesting remarks, bearing on Ouigour literature:

"The last preface dated in 1306, gives the names of twentynine savans versed in the Tibetan, Ouigour, Sanscrit, and Chinese languages, who were charged, as appears by the

<sup>&</sup>lt;sup>1</sup> Vol. xix. pp. 461-471.

Remusat, Recherches sur les langues Tartares, p. 29, passim.

<sup>&</sup>lt;sup>4</sup> Davids, Grammaire Turke, p. xvi. <sup>5</sup> Remusat, Recherches, etc. p. 284.

preface of 1289, to compare the texts with each other, to collate the translations, and to revise and fix them definitively for the general reimpression. Their work, begun in 1285, was finished in 1287. Among these savans, we observe a Buddhist priest from Tourfan, versed in the knowledge of every branch of the sacred literature, who was charged by imperial order to verify the Indian words, and an academician, named To-in-tou-tong, who was commissioned to translate the Ouigour words. An extremely curious fact, unknown hitherto, seems to result from the last-named fact. that is, that the greater part of the Buddhist books must have been translated into Ouigour for the use of the subjects of the Chinese empire who spoke that language. This conjecture is fully justified by the following testimony. I read in the history of celebrated Buddhists, published under the Sung in 988, a passage which shows that anciently the Buddhist books were translated, not only in Tibetan and in Chinese, but also in the languages of people now under submission to the Chinese, and whom the latter treated as barbarians:- 'When the Sutras and works on discipline from India were taken to Koutché, on the north of the Tsung-ling mountains, to Lèou-lan, to Kharachar, to Khotan, and to Khashgar, the natives not understanding the language of India, the books were translated for them into the barbarian languages which they spoke.' Now several of the abovenamed countries, which at present form part of Bucharia, were previously occupied by Ouigour tribes, at the epoch when our catalogue was published. Scarcely more than two or three Ouigour manuscripts are known in the great libraries of Europe; should there exist then at Peking any considerable portion of the Buddhist books in this ancient dialect of oriental Turkish, so precious for philology, and so little known, it would be an object of the highest interest, to purchase them there at any price, and to place them within the reach of scholars."1

Of the very few specimens of the ancient language and

<sup>&</sup>lt;sup>1</sup> Mélanges de Géographie Asiatique, pp. 223, 224.

literature of the Ouigours known in Europe, the oldest of the manuscripts does not date earlier than the 10th century.<sup>1</sup>

When the Mongols under Genghis khan began to attain their immense power, they were a comparatively unpolished people, and possessed no literature of their own. On the defeat of the Naimans by that nation, Tatatonggo, the secretary of the Naiman prince, a Ouigour by birth, was made prisoner; but was instated by Genghis as Professor of the Ouigour language and literature, for the benefit of his subjects, the princes and nobles of the Mongol nation.2 Being thus initiated into the literature of the Ouigours, as a matter of necessity the Mongols had naturally fallen into the habit of using the same character for the purpose of committing their own language to writing; and this practice continued to prevail during the supremacy of Ogdai, Guyu, and Manggu, the three successors of Genghis khan. Ruysbruk, who went on an embassy to the Mongolian court, from France, in 1253, speaking of the Ouigour characters, says:-"Mangu khan has sent to your Majesty (St. Louis) letters written in the Mongol or Tartar language, but in Ouigour characters."3

When the dynasty took possession of China, under the succeeding monarch, Kubla, and the exigencies of a fixed government were more urgent, the inadequacy of the Ouigour character fully to express the articulations and vocables of the Mongol language were felt to be a source of embarrassment. As, it would seem, no man among the Mongols was found to possess sufficient philological tact and inventive skill to remedy this inconvenience, the venerable Tibetan lama Saadja Bandida, under special invitation, took up his residence at the court of Kubla, and applied himself to the task of so modifying the Ouigour character as to adapt it to the requirements of the Mongol. In his scheme, he had retained the fourteen Ouigour consonants, but he died while engaged on the work, leaving it still incomplete. The result was, the

<sup>&</sup>lt;sup>1</sup> Davids, Grammaire Turke, p. xviii.

<sup>&</sup>lt;sup>2</sup> Ibid. p. xviii. Klaproth, Abhandlung über die Sprache und Schrift der Uiguren, pp. 54, 55.

<sup>&</sup>lt;sup>3</sup> Klaproth, Abhandlung, etc. p. 56.

invention by his successor, Båshpah, of the Mongolian alphabet noticed above. Although the latter was promulgated in 1269, as the official character of the dynasty, yet, in 1272, we find a memorial to the throne complaining that the officials persist in writing their documents in the Ouigour character. An edict followed thereupon, condemning the practice, and insisting upon the adoption of Båshpah's character. In 1278 the use of the Ouigour character on the military signets was forbidden. In 1284, an imperial decree forbade the use of the Ouigour character in all memorials and documents presented by the metropolitan functionaries.

About the beginning of the 14th century, Eldjaïtu, the successor of Kubla, commissioned the priest Tsordji Osir to translate the Tibetan sacred books into the Mongolian language, and write them out in the Bâshpah character. The lama, however, failed in the attempt; and in order to supersede the difficulty, he reverted to the unfinished work of Saadja Bandida, made such additions as were needful for his purpose, and wrote out with it a Mongol translation of the Tibetan work Bangcha Raktcha, but found it necessary to express a great many words in Tibetan characters.

Under the direction of Kaisun-killik, the succeeding Emperor, who reigned from 1307 to 1311, Tsordji Osir made such further additions as were needful for adapting the Ouigour alphabet to the perfect transcription of the sounds of the Mongol language. These details, drawn mostly from Klaproth's "Abhandlung über die Sprache und Schrift der Uiguren," are found in the Chinese history of the Yuen dynasty, and also in a Mongol work, Brulba Saagdja Bandida yin gargaksan Mongol Usuk, "The Mongol literature invented by the holy Saagdja Bandida," published in China in 1730.1

Ahmed Ibn Arabschah, an Arabian author, who wrote about 1440, gives a short notice of the Ouigour alphabet, in which he says:—"The Djaghataiens have a writing which they call Ouigour, and which may be recognized as the same

See Remusat's Recherches, etc. p. 154. Pallas, Sammlungen, etc. vol. ii. p. 356. Klaproth, Abhandlung, etc. p. 57.

as that of the Mongols; it is composed of fourteen consonants, which have the forms following." Here he inserts a copy of the Ouigour alphabet.

The work above named, Brulba, etc., also gives a table of the fourteen consonants of the Ouigours, combined respectively with the three vowels a,  $\hat{a}$ , and i, as used by the Mongols previous to the improvement of the lamas.2 It is doubtful, however, if this be altogether trustworthy; for we find nothing in it to represent the vowel o, a letter which is of constant occurrence in the specimens of Ouigour literature preserved in Europe. Were it not so, I should have been disposed to think that in the present transcription we had a specimen of the writing in a transition stage; but from the close resemblance which it bears to the caligraphy of the two Mongolian letters discovered by Remusat in the archives of France, I have no doubt that it is a pure specimen of the character as used by the Ouigours. These two letters,addressed to Philip the Fair of France, the first by Argun, the Mongol prince of Persia, in 1289; and the second by Eldjaitu, his successor, in 1305; were thought by Remusat to be in the original Ouigour character, though the documents are in the Mongol language.3

In 1845, a silver plate similar to the signets bearing the Båshpah superscriptions noticed above, but having the superscription in the Ouigour character, was found at Grouchovka, on the Dnieper, in the government of Ekatérinoslaf, in Southern Russia. A report on this plate was made to the Academy of Sciences at Petersburg, in 1848, by Mr. Banzarof, which was published in their "Bulletin historicophilologique," with a facsimile engraving; from which we see that the writing is almost identical with that on the in-

<sup>&</sup>lt;sup>1</sup> Langlès, in Notices et Extraits des Manuscrits de la Bibliothèque Royale, tom. v. Klaproth, Abhandlung, etc. p. 56. In his Mémoires relatifs à l'Asie, tom. ii. p. 318, he gives a facsimile of this alphabet.

<sup>&</sup>lt;sup>2</sup> Klaproth, Abhandlung, etc. p. 57.

Tome v. article 9. 1848.

scription now under consideration. As we know that the use of the Ouigour character on these signets was prohibited in 1278, it must have been made previous to that date.

The portion to the right of the Ouigour is in the Neuchih character, consisting of twenty-seven lines of large size and twenty-one lines of a smaller type. The large character portion is almost a counterpart of the Sanscrit, down to about the middle of the twenty-fifth line, where the dhârani concludes. It commences with the invocation Om bhûr om svâhâ, the same as the Chinese and others, and the portion following the dhârani is evidently a doxology, though I have only succeeded in identifying a small portion of it.

Although the name of this writing is not unknown to orientalists, yet beyond the name very few facts have been gathered; and this inscription I believe to be unique, not only as giving a correct specimen of the caligraphy, but as being the only piece yet discovered, in which there is any

clue to the powers of the characters.

The Neuchih Tartars succeeded the Tsitans as the dominant power in the north of China, in the early part of the 12th century, under the name of the Kin dynasty. Originally a rude unlettered tribe, they were dependent upon the Chinese and Tsitans for their correspondence and literary negotiations: but they learned to rise with their position, and it was not long ere they began to feel the inconvenience of transacting their diplomacy through interpreters in an alien language. Impressed no doubt with the importance of possessing a national literature, the preliminary necessity of a written character capable of expressing the sounds of their language became apparent. They saw that their predecessors and vanquished rivals, the Tsitans, had been placed at a similar disadvantage at the beginning of their rule, and had invented a character which had been the national writing of the Leaou dynasty for about two hundred years.1 Following their precedent, Akuta, the founder of the Kin, resolved upon

<sup>&</sup>lt;sup>1</sup> I only know of the existence of one inscription in this character, and as there is no translation of it in Chinese or any other language,

having special resources for reducing to writing the language of his tribe; and having among his captives many subjects of the Chinese and also of the Leaou, a special study was made of the literature of these two nations. The result was that an imperial commission, consisting of Ouyé, Moulianho, and Kuhshin, was appointed to form a new set of symbols, from the elements of the Chinese pattern-hand characters, on the same principle as those of the Tsitan, but adapted to the sounds of their national language. In a few months the characters were formed, and an imperial decree issued in the eighth month of the year 1119, ordered their general adoption.2 In 1138, He-tsung, the third emperor, originated a new set of characters for the Neuchih language, and these were named Small Neuchih characters; while those which Kuhshin and his colleagues had invented were termed the Large Neuchih characters.3 The Small characters were brought into use officially, in the fifth month of the year 1145.4

The Vandalism attendant on the overthrow of dynasties in China, has been especially destructive to the literary productions of the conquered party, and it is scarcely to be expected that many traces of the literary ingenuity of the Neuchihs would survive their subjection to another race. A note to the Suh wan heen t'ung k'aou tells us that the Chinese Classics and Histories were translated in this character; and a catalogue of the imperial library during the Ming<sup>5</sup> gives

1 Suh wan heen t'ung k'aou, book 184, p. 31. De Mailla, Histoire

générale de la Chine, tom. viii. p. 390.

<sup>2</sup> Kin she, book 2, p. 14. Hung keen luh, book 214, p. 14.

the titles of fifteen works in the Neuchih character. Whether any of these are still in existence is I think at least doubtful, but M. Rosny expresses a more hopeful view of the case.<sup>1</sup>

That the language and literature of the Neuchihs did not at once disappear with the extinction of the dynasty we have evidence, for in 1407, when a translatorial institution was established by the Ming, for the purpose of facilitating correspondence with foreign nations, one of the languages to which special attention was directed was the Neuchih. The students were examined periodically, and the most efficient appointed to offices in connection with the embassies. In 1470 seven interpreters were officially designated for the Neuchih language, and the number was afterwards increased to nine. The translatorial office was re-established on the accession of the present dynasty in 1644, with a president and corps of fiftysix professors. Long before this, however, it is probable that the cumbrous Neuchih character had become obsolete, for in the accounts we have of the invention or rather adaptation of the present Manchu character, there is no hint of any kind of writing in existence peculiar to the tribe. The Manchus being the actual descendants of the Kin dynasty Neuchihs, there would scarcely be a distinct language, and we consequently find the Neuchih department of the translators' office suppressed in 1659, and the ancient Neuchih character entirely superseded by the modern Manchu.

Remusat, in his "Recherches sur les langues Tartares," has written at greater length on this subject than any other European author, having collected together what few notices he could find in Chinese works; but having never seen a

¹ He says: "When the friends of science shall have undertaken scientific journeys, for the purpose of exploring the great public and private libraries of China, libraries whose number is immense, and the preservation of which has been the object of the greatest care and attention, we shall doubtless find the greater part of the literary monuments for which we are now anxious, and a number of others, which will prove so many revelations in the midst of this old Chinese world, whose destiny on earth may probably have been to preserve to us vestiges of primitive and forgotten ages in the history of the globe."—Revus Orientale et Américaine, 1° serie, tom. vi. pp. 386, 387.

specimen of the Neuchih writing, he was induced by the descriptions to believe that the character now used by the Coreans was identical with that of the Kin dynasty. This hypothesis at least we are now in a position to meet with a direct negative. An inscription in an unknown character, at the Imperial Mausoleum at Keen-chow, in the Province of Shense, has been preserved to us in a Chinese work published in 1618, the 石墨錦 hin min tseuen hwa.¹ From a Chinese translation and note given on the tablet, we learn that this is an inscription in the Neuchih or national character of the Kin dynasty. The date given is 1134, from which we see that it was cut previous to the invention of the Small Neuchih character; so that there is no doubt we have there a specimen of the Large Neuchih character, invented by Kuhshin and his colleagues.

A facsimile of this inscription from the Che puh tsuh chae ts'ung shoo, was published by Professor Neumann in 1837, in regard to which he remarks:—"I am not able to read the Kin writing, much less to translate it; but it is obvious from the frequent repetitions of characters in the text of our memorial that this Kin writing consists of a syllabary composed of abbreviated and modified Chinese characters."<sup>2</sup>

Shortly after this the same inscription seems to have attracted the attention of the Archimandrite Habakkuk, while he was residing at Peking, and he communicated it to Father Hyacinth at Petersburg in 1841. The latter gave a facsimile of the same in his work on the statistics of China.<sup>3</sup>

I was not aware of this inscription having been noticed or

<sup>1</sup> This work was reprinted during the present dynasty, in a collection entitled 藝面 搜奇 E poo sow ke. It was also reprinted in a reduced form in the 知不足齋叢書 Che püh tsüh chae ts'ung shoo, published in the 18th century. The same inscription is reproduced in the 金石萃編 Kin shih tsüy pen, published in 1805. It is noticed in several other works on lapidary inscriptions.

<sup>&</sup>lt;sup>2</sup> Asiatische studien, p. 41.

<sup>&</sup>lt;sup>3</sup> See Journal Asiatique, 5° série, tom. 17, p. 532.

published by any one in Europe, when it occurred to me to collect what information I could regarding the system of writing used by the Neuchihs; and the inscription in question, which I found in the *Shih mih tseuen hwa*, being the only specimen of the character that I could discover, I forwarded a facsimile, with some remarks, to the Asiatic Society in 1859. The same appeared in the Society's Journal the following year.<sup>1</sup>

In 1861, Professor De Rosny, of Paris, published an article on "The Neuchih, their language and literature," by which it appears he has misunderstood my remarks; but he expresses, with considerable confidence, his belief that the writing is ideographic and not alphabetic. Although my opinion was decidedly in favour of the Neuchih being an alphabetic or syllabic writing, I find, on referring to my former article, that I scarcely expressed such a view, preferring to leave the question to be decided when we should acquire more light on the subject. It was something novel to me to find M. de Rosny advocating the ideographic as the most probable, to the exclusion of the alphabetic, and I regret that he has not given us a fuller development of his reasons, for, from his extensive knowledge of the written characters of various nations, probably few are in a more favourable position to form a correct appreciation of the matter.

If my tendency was formerly towards the alphabetic theory, my views are now so far modified by the analysis of the newly-found inscription, that I incline to the view at first expressed by Professor Neumann, that the Kin was a syllabic writing.<sup>3</sup>

<sup>&</sup>lt;sup>1</sup> Journal of the Royal Asiatic Society, vol. 17, pp. 331 passim.

Having ascertained, then, with tolerable certainty that the preceding inscription is a specimen of the Large Neuchih character; and being assured that the one with which we are now occupied is also Neuchih—observing the radical difference in the formation of the characters; we are shut up to the conclusion that this is a specimen of the Small Neuchih character, invented in 1138. The date is more than two centuries later, being 1345.

Thanks to the transcripts in the other characters, and especially the Sanscrit, there are scarcely any of the Neuchih in the larger size part to which I cannot attach the sounds with a high degree of probability, if not absolute certainty. The conclusion at which I have arrived is given in the plate facing this page.

The last character in the list to which I have not put any sound, is one of very frequent occurrence, being found 39 times; that is, it is distinctly legible 33 times, and in six other places I have supplied it, as I think, on unquestionable authority. It is to be noticed that in every case this is written smaller than the other characters; a peculiarity which belongs only to two or three others in certain places, and appears to me to indicate that the sign so written plays a secondary part in the syllable. Another peculiarity which attaches to the is, that while every other Neuchih sign is represented by a corresponding one in Chinese, there is in no case any counterpart to this in Chinese. Of the 39 places where it is found, 30 times it stands against the long vowel \$\alpha\$; i.e. in \$\alpha\$, 2; \$b\alpha\$, 1; \$d\alpha\$, 1; \$b\alpha\$, 7 (3 of which I have supplied); \$k\alpha\$, 1; \$m\alpha\$, 2; \$n\alpha\$, 3 (one of which I have

a relic of the Kin. The paucity of documents in that character

may warrant its insertion here. The explanatory note says:—"This Sanscrit character coin is eight-tenths of an inch diameter, and weighs 3 choo (去) 6 ts'an (多). It is copper, of a pure red colour. The superscription is undecipherable, but it bears a general resemblance

to the coins of 屋默 Uh-t'o and Turfan (or Tibet)."

supplied);  $p\hat{a}$ , 1;  $sv\hat{a}$ , 1;  $t\hat{a}$ , 2;  $th\hat{a}$ , 7 (one of which I have supplied);  $y\hat{a}$ , 1; and twice it is found against the long vowel  $\hat{a}$ ; i.e. in  $bh\hat{a}$ , 1;  $p\hat{a}$ , 1. Seven times it is found appended where there is no long vowel in the Sanscrit, of which four of the syllables end in a; i.e. na, 1; ra, 1; ta, 1; ya, 1; 1 one ends in e; i.e. ddhe; and two end in i, i.e. ddhi, 1; and ti, 1 (which I have supplied).

From the preceding analysis of 39 occurrences of this character, I am disposed to think that it is a sign indicating the lengthening of the vowel in the syllable to which it is attached, and that the seven (or perhaps six) exceptions are

irregularities.

Such is the result of the inscription on the east side of the arch, and the decipherment of the west side would probably add a few more to the number of the identified vocables. From an examination of these 81 characters, I am convinced that the Neuchih writing was pre-eminently syllabic, and not alphabetic, as I inferred on a former occasion. The selection of symbols appears to me to be the most arbitrary, nor can I see any approach to principle or mutual relation in comparing the one with the other. Not only do we find the utmost diversity in the forms of any series of syllables we may select, classified either according to their initials or finals, or any other principle that I can think of; but there are also characters nearly similar in form, which express widely different sounds.

1 It is doubtful if this syllable ought not to be ya.

It would seem as if a number of Chinese characters had been selected to represent the sounds in the Neuchih language, on the plan adopted by the Japanese, but abbreviated and disfigured after a fashion of their own, to which we have now no key. While the original or Large Neuchih characters, of which the specimen at Keen-chow has been published, show some traces of the form of Chinese, this latter invention of the Small Neuchih characters appears to be a more elegant and abbreviated form, in which the slight traces retained in the earlier invention are altogether obliterated, and the faintlypictorial forms of which each character was made up are represented by merely conventional collocations of strokes. Thus we have all the cumbrous variety of a pictorial system adapted to the expression of a simple series of vocables. The scheme is, probably, unique in the history of chirography, and is not a little suggestive in reference to the condition of the people among whom it took its rise. It seems strange that a complex syllabary like this should have been adopted by a people living so near the tribes who were using the simple Ouigour alphabet, and would imply a very restricted intercourse with such tribes. Instead of wondering that such a method of writing should be neglected and become obsolete, we may rather be astonished that it was able to maintain its ground for two centuries and more, as is proved by this inscription.

It is probable that the eighty-one signs here given are but a small portion of the Neuchih syllabary, as it is not at all likely that the simple sounds of the Sanscrit alphabet would anything like exhaust the vocables of the Neuchih language. Accordingly we find in the twenty-one lines of small characters at the end of the large, a great number of new ones which do not occur in the preceding portion. Now as every several character has to be learned by itself, and the knowledge of any one or more gives no clue to what is the sound of another, here is a study of a much more difficult nature.

I have mentioned that each of the parts except the Sanscrit concludes like this, with some lines in a smaller size character. On looking over the Chinese part, I saw at once that that was not a mere transcript of foreign sounds, but a veritable piece of composition in the Chinese language. Although very much defaced and obliterated, I have been able to get an approximate sense out of the several detached fragments, though the omission of so many links necessarily prevents a perfect translation even of what remains.

Having shown the Tibetan portion to Professor Foucaux, at Paris, I ascertained from him that that was in the Tibetan language, and not a transliteration from another tongue. From a cursory inspection of that hopelessly imperfect portion, he could give me the meaning of such fragments, that I felt assured, if it was not the exact translation of the Chinese, it was at least the same in substance.

A superficial examination of the Mongol portion satisfied me that that was also in the Mongol language; and the Ouigour portion seems to be in the Ouigour language. Under these circumstances, the presumption is almost a certainty that the small-size Neuchih is a specimen of the Neuchih language as well as writing. This imparts an additional interest to it; and while the difficulty of interpretation is thereby increased, its philological value is greatly enhanced.

Appended is an interlinear restoration of the inscription, and the sounds of the syllables given in Latin characters, according to the Sanscrit. The columns coincide in length and number with the original lines of the Neuchih portion, and the corresponding syllables in each of the six lines are placed horizontally opposite, as near as the peculiarities of the respective systems will admit. The portion in black is what is preserved of the original inscription, and the missing parts which have been supplied are represented by the red.

<sup>&</sup>lt;sup>1</sup> A reduced facsimile of the four vertical portions of the inscription, produced by photo-lithography, from the original rubbing, will appear in Col. Yule's forthcoming work on Marco Polo.

Art. III.—The Bṛhat-Sanhitâ; or, Complete System of Natural Astrology of Varâha-mihira. Translated from Sanskrit into English by Dr. H. Kern.

(Continued from Vol. IV. p. 479.)

#### CHAPTER VIII.

### Jupiter's Course.

- 1. Each year (during which Jupiter completes a twelfth part of his revolution) has to bear the name of the lunar mansion in which he rises; the years follow each other in the same order as the lunar months.<sup>1</sup>
- 2. The years Kârttika and following comprehend two lunar mansions beginning with Kṛttikâ and so on, in regular suc-
- <sup>1</sup> This yerse has been treated at full length by Davis in his admirable paper on the Indian Cycle of Sixty Years in As. Res. III. 217, seq. In it a part of Utpala's commentary also is given in translation. reading followed by Davis, as appears from his translation, is: नच्चि सहोदयमसां वा येन याति सुरमन्त्री, which is mentioned also in the Var. Lect. to the edited text. The comparison of the MSS. leaves little doubt that this reading is a correction, suggested by the remark of Utpala, that in case the planet should set in one and rise in another Nakshatra, only that name must be taken which agrees with the order of the month. It may happen that the Jovial year is called Margaçarsha, although the planet sets in it, and this does not seem to agree with the author's rule, but only those names of Nakshatras can be used, from which the names of the lunar months are derived; even if Jupiter rises in Rohinî, the year cannot be called Rauhina, there being no month of the name. The addition of the word मासन्नमेणिन implies the rule which is expressed in the reading followed by Davis. Cf. also Warren, Kala Sankalita, p. 197, seq., and Whitney's remarks on Surya S. 14, 17.

cession, except the fifth, eleventh, and twelfth years, to each of which appertain three asterisms.<sup>1</sup>

3. In the year of Kârttika, waggoners, those who have to deal with fire (smiths), and cows, suffer; sickness and war

rage, but all sorts of red and yellow flowers thrive.

4. In the year of Margaçırsha will be drought and loss of the grains, owing to wild beasts, mice, grasshoppers, and birds; there is danger of sickness, and monarchs get into hostilities even with their friends.

5. Pausha is a happy year to mankind; the kings make an end to their quarrels, the grains will sell at double and thrice the prime cost, and all actions tending to promote welfare have good success.

6. In Magha the Ancestors are extremely honoured, and all creatures feel satisfaction; there is health, rain, good

prices, and acquisition of friends.

7. In the year of Phâlguna one may expect in a few places safety, prosperity, and corn. Women will be neglected by their husbands, thieves be numerous, and sovereigns cruel.

8. In Caitra there is slight rain and dearth, but safety prevails and the kings rule mildly. Pulse<sup>2</sup> thrives; beautiful persons will have to suffer.

9. In Vaiçâkha both people and kings will obey the laws and feel safe and glad; sacrifices are carried on happily, and

all kinds of crops succeed.

10. In Jyaishtha such as are eminent by caste,<sup>3</sup> family wealth, craft,<sup>4</sup> kings, and those who know the law, have to

<sup>&</sup>lt;sup>1</sup> To the fifth year, Phâlguna, the corresponding mansions are: Pûrva-Phalgunî, Uttara-Phalgunî, and Hasta; to the eleventh, Bhâdrapada: Çatabhishaj, Pûrva-Bhadrapadâ, and Uttara-Bhadrapadâ; to the last year, Âçvayuja: Revatî, Açvinî, and Bharanî.

<sup>&</sup>lt;sup>2</sup> Comm. कोश्रधान्यस्य शिम्बिधान्यस्य मुद्रादेर्नृडिः.

<sup>&</sup>lt;sup>3</sup> Some MSS. write IIIa; as no paraphrase of the word is given, it remains uncertain what the commentator meant.

<sup>&</sup>lt;sup>4</sup> The term श्रेणी is the counterpart of the Latin ordo, especially in its more restricted sense, e.g. in ordo publicanorum. The definition by the scholiast is, बह्रनां समानजातीयानां सङ्घः श्रेणी.

suffer, as well as the crops, barring panic seed, and the genus of leguminosa.1

11. In Ashâdha grain will grow at some places; elsewhere drought prevails. Increase of wealth and safety there is, albeit indifferently, and the monarchs are turbulent.

12. In the year of Çrâvana there is safety, and the grains grow duly ripe; but the vile infidels,<sup>2</sup> and those that cling to them, have to suffer.

13. In Bhâdrapada the creepers (amongst the leguminosa)<sup>3</sup> and the early corn succeed well, but the late corn does not get on; somewhere there is abundance, elsewhere uneasiness.

14. In the year of Âçvayuja the rains fall continually; there is gaiety amongst the people, and safety; all creatures increase in strength and have plenty of food.

15. Jupiter, when moving in the north of the lunar mansions, produces health, abundance and safety; when in the south, the reverse; when in the middle, he exercises an influence holding the mean between both extremities.

16. When he makes in his course two mansions during a year, he is auspicious; when two and a half, his influence is neither good nor evil; should he, perchance, go through more, then he destroys the grain crops.

17. When the planet looks red like fire, there will be danger of fires; when yellow, sickness; when gray, a battle is impending; when greenish yellow, one has to suffer from robbers, and when blood-red, from the force of arms.

18. Drought prevails when Jupiter has the hue of smoke; when he is visible at day, the king will be killed; but when the planet is seen at night, large, spotless and bright, the people will enjoy well-being.

¹ Comm. श्रमीजातिखिलादिः।

It is manifest that these infidels, बद्वाह्याः, are the Bauddhas, for because the year happens to be called Crâvaṇa, suffering must come to the Crâvakas. The whole of astrology is based on such quibbles, which it would be tedious and useless to point out in every instance. Cf. ch. ix. 33.

<sup>े</sup> Comm. मुद्राद्विम्

19. Rohinî and Krttikâ are (figuratively) the body of the year; both Ashâdhâs, the navel; Açleshâ, the heart; Maghâ, the flower.¹ These being free of evil influences,² the effects will be good; but when the body is afflicted by a cruel planet,³ danger arises from fire and wind; when the navel, danger is caused by famine; whenever the flower suffers, roots and fruits perish; the heart being hurt, the corn is lost most certainly.

20, 21. Multiply the years expired since the era of the Çâka-king (i.e. the Çâka era) by eleven, and the product by four; add 8589; divide the sum by 3750; to the quotient add the Çâka years; divide this by sixty (to find the cycles), and the remainder by five; the quotient shows the number of lustrums ruled by Vishnu, etc., and the remainder will be

years in their regular order.4

22. Multiply the years by nine, and add one for every twelve years; <sup>5</sup> divide by four; the quotient shows the number of mansions to reckon from Dhanishthâ, and the remainder shows the number of fourth-parts of the lunar mansion which have expired in the present year.<sup>6</sup>

¹ The term नुसुस or पुष्प is not explained by the commentator. It probably denotes the centre of the heart, the seat of the soul, the दहरं पुण्डरीनं of the Chândogya-Upanishad 8, 1, 1. The Prâkṛt भुसणी (सुसनः) in Çâkuntala, pp. 74 and 76 (ed. Böhtlingk), must also have the meaning of "soul, life."

<sup>&</sup>lt;sup>2</sup> i.e. not visited by evil planets.

<sup>3</sup> The cruel or evil planets (graha) are the Sun, Mars, and Saturn.

<sup>&</sup>lt;sup>4</sup> The principles of this computation have been explained by Davis, As. Res. iii. pp. 219 and 215. In the latter passage, however, there is an inaccuracy, inasmuch as the additive number or kshepa is not 4892, as Davis has it, but  $4294\frac{1}{2}=\binom{8689}{2}$ , according to the rule of Varahamihira, and 4291 according to that of the Jyotistattva. The same passage is almost literally a translation of Utpala's Commentary.

In the text r. द्वादश्वक्रमेण.

<sup>6</sup> Here a part of Utpala's Commentary, the condition of which in my MSS. leaves much to be desired: वर्तमानषथ्यव्द ख ये गताः सविकासा अब्दा अनष्टाः पृथक् स्थाप्याः। तान्सविकास पृथगेकत्र नविभग्नियोत्।

23. Vishnu, Brhaspati, Indra, Agni, Tvashtar, Ahirbudhnya, the Ancestors, Viçve-Devas, the Moon, Indra-Agni, the Açvins, and Bhaga, are indicated to be the lords of the lustrums, successively.

24. The (first year of each lustrum called) Samvatsara is (ruled by) Agni; the second, Parivatsara, by the Sun; the third, Idavatsara, by the Moon; the fourth, Anuvatsara,

by the Creator; and the last, Udvatsara, by Rudra.

25. In the first year of a lustrum there is indifferent rain; in the second, rain falls only in the beginning of the season (i.e. in Çrâvaṇa and Bhâdrapada); in the third, rain is very copious; the fourth year brings rain in the later season (i.e. only in Âçvina and Kârttika); the fifth year is said to give very little rain.

26. Amongst these lustrums there are four excellent, viz., those ruled by Vishnu, Indra, Brhaspati, and Agni; the four middlemost are indifferent, and the four last are reputed to be very bad.

27. When Jupiter, on reaching the first quarter of Dhanishthâ, rises in the lunar month of Mâgha, then begins

ततो दितीयस्थानस्थिस्यो वर्तमानषध्यन्द्गतवर्षेस्यो द्वाद्शभिर्द्वाद्शभिर्वर्षेत्रेकं वर्षे योजयत्। The years are multiplied by 4, and divided by 9, because a sign is equal to 2½ Nakshatras; ततो नवाहता सन्दानचपादा भवन्ति राक्षात्मकत्वात्। तत्र द्वाद्शक्रमेणैकेको नचनपादी दीयते पृथकस्थादन्द्समूहायतस्तव वर्षद्वाद्शकेन नचनपादमन्तरं भवति। चतुर्भिर्भागे द्वते नचनाणि सक्तवानि लस्यन्ते। तेषाञ्च धनिष्ठा-दिका गणना यतो धनिष्ठास्थे गुरौ षध्यन्द्रप्रवृत्तिः। यतो वन्यति आवं धनिष्ठांश्वमिति (v. 27) स्र्थादेव श्रेषं भोज्यनचनपादा भवन्तीति॥

1 The r. उद्वतार is preferable to द्वतार as adopted in the printed text, for it denotes the last year. Cf. the Var. Lect. It must be added that some MSS. of the Comm. too have उद्वतार. Cf. also Weber, Naxatra, 2, 298.

the first year of the cycle of sixty, named Prabhava, a year

salutary to all beings.1

28. At some places, however, will be drought, and raging of storms and fires; plagues of the country also and phlegmatic diseases are found in the course of this year of Prabhava; yet people will feel no serious grief.

29. The year following is known as Vibhava; the third is Çukla; after it, Pramoda; and, finally, Prajâpati. These years and their effects are happy in an always increasing

degree.

30. Over countries where rice, sugar-cane, barley, and other corn produce good crops, where dangers are past, hostilities stilled, mankind rejoicing, where the miseries of the Iron Age have disappeared, the monarchs then hold their sway.

31. In the second lustrum, the first year is Angiras; the two following Çrîmukha and Bhâva; then Yuvan; finally, Dhâtar; these are the five years in due order. Three out of

them are excellent; the two remaining middling.

32. In the former three years<sup>2</sup> it rains sufficiently, and people live free from affliction and dread. In the latter two also it rains indifferently well, but diseases prevail and war is impending.

33. In the lustrum presided over by Indra, the first year bears the name of Îçvara; the second, of Bahudhânya. The three following years, as measured by the motion of Jupiter,

are known as Pramâthin, Vikrama, and Vṛsha.3

34. The first and second are good years, and bring back the Golden Age, as it were, amongst mankind. Evil is Pra-

<sup>&</sup>lt;sup>1</sup> Cf. Davis, As. Res. III. p. 220. The word ança also means "degree," but is here rendered by "quarter," according to Utpula, who explains it by pûda.

² R. in the printed text, चिष्णादावर्षेष, as the Comm. has.

³ This word is constantly written विष in one MSS. of the Comm. This in addition to the Var. Lect. The word is introduced into Tamil in the form of viśu.

mâthin, but Vikrama and Vṛsha bestow copiousness of food, although at the same time they cause dangerous diseases.

35. The first year of the fourth lustrum, which they call Citrabhânu, is excellent; the second, named Subhânu, is

middling; it brings sickness, yet causes no mortality. 36. Then follows Târana, which gives conjous rain:

36. Then follows Târaṇa, which gives copious rain; further, Pârthiva, joyful, with the luxuriant growth of grain. The fifth year, Vyaya, is held to be a happy one: love reigns supreme, and festivities follow one another without interruption.

37. In the lustrum of Tvashtar, the first year is termed Sarvajit, the second Sarvadhârin; on this follow Virodhin, Vikṛta, and Khara. Of these the second is auspicious, the others are dangerous.

38. Then (in the lustrum allotted to Ahirbudhnya the years are:) Nandana, Vijaya, Jaya, Manmatha, and Durmukha. The first three in this lustrum are beneficent; Manmatha produces indifferent effects; the last year is very bad.

39. In the seventh lustrum are Hemalamba; farther Vilambin, Vikârin, and Çarvarî; the fifth Jovian year in the cycle

is known by the name of Plava.

40. During the first year there will be a great many plagues in the country and rains accompanied with much wind. In the second year there will be but little corn and not much rain; 3 the third will be very rich in terrors and rain; Plava, finally, is beneficent, and gives plenty of rain.

41. In the lustrum ruled by the Viçve-Devas the first year is called Çobhakṛt, the second Çubhakṛt, the third Krodhin;

the succeeding are Viçvâvasu and Parâbhava.

<sup>&</sup>lt;sup>1</sup> The Comm. follows a wholly different reading. See Var. Lect.

<sup>2</sup> The names of the years are as well masculine as neuter, because abda is promiscuously used in both genders. As to Çarvarî, our text would admit also a stem Çarvarin. Utpala does not analyze भूति। The Tamil form is śdrvari.

<sup>&</sup>lt;sup>3</sup> व्हस्तिनं is erroneously printed as if it were a compound.

<sup>4</sup> Utpala, according to the testimony of the copyists or correctors of

42. The first and second bring pleasure to the people; the third many evils; the last two are indifferent, but in Parâbhava will be fires, distress owing to war and sickness, and danger to Brahmans and kine.

43, 44. The first year in the ninth lustrum is Plavanga, the second Kîlaka; farther, Saumya, Sâdhâraṇa, and, lastly, Rodhakṛt. Kîlaka and Saumya bestow hail; Plavanga is unfortunate for mankind, in many respects; Sâdhâraṇa brings little rain and plagues of the country. As to the fifth year, Rodhakṛt, the rain in it and the thriving of the crops will be unequally divided.

45. In the tenth lustrum, which is sacred to Indra-Agni, the first year has the name of Paridhâvin. Then comes Pramâdin and Ânanda; the following are Râkshasa and

Anala.

46. In Paridhâvin, the middle-country is ruined, the king lost, the rain deficient, and fire shows its fury. In Pramâdin men are indolent; there will be riots, and loss of red flowers and seeds.

47. The following year makes all men rejoice. Both Râkshasa and Anala bring damage; the former produces summer corn, the latter excites conflagrations and pestilence.

48. In the eleventh lustrum are Pingala, Kâlayukta, Siddhârtha, Raudra, and Durmati. During the first year there is excessively much rain, theft, asthma, cough, and shaking of the jaws.

49. Kâlayukta has many evils, but in Siddhârtha are many good things. Raudra is declared to be very cruel and per-

nicious. Durmati brings, moderately, rain.

50. In the lustrum lorded over by Bhaga, the first year, called Dundubhi, greatly promotes the growth of the grain.

some MSS. of his commentary, prefers মাৰহন, but according to other copyists, মাৰহন. The Tamil has borrowed this and the following name in the form of śubakirutu and śobakirutu, consequently in inverse order.

The following, termed Udgârin, is baneful to sovereigns, whilst the rains during it will be unequally distributed.

51. The third year is Raktâksha, in which there is danger caused by mordacious animals, and sickness. The fourth, Krodha, arouses much wrath, and depopulates kingdoms through wars.

52. The last year of the last lustrum is styled Kshaya. This, the originator of manifold loss, causes danger to Brahmans, though it makes cultivators thrive, and augments the profits of Vaiçyas, Çûdras, and thieves.

Herewith I have given, in a succinct form, the whole of what is contained in the work, "the Cycle of Sixty Years."

53. The planet Jupiter, when bristling with bright rays, showing a large orb and the hue of the white lotus, of jessamine or crystal, whilst moving on the right road,<sup>3</sup> not overpowered by another planet,<sup>4</sup> brings weal to mankind.<sup>5</sup>

#### CHAPTER IX.

#### The Course of Venus.

I. There are nine paths (along which Venus moves), namely, that of the "wild elephant," "the elephant," "the celestial elephant," "the bull," "the cow," "the old ox," "the deer," "the goat," and "fire." Some state that these

¹ The Comm. has अङ्गर for उद्गारि, most probably a clerical error (see Var. Lect.). The Tamil has urottirotkari, which points to the Sanskrit रिवरोद्गारि.

<sup>&</sup>lt;sup>2</sup> Comm. विषमा। त्रतुन्या। त्रतिचण्डा वा।

<sup>3</sup> i.e. in the north of the Nakshatras.

<sup>&</sup>lt;sup>4</sup> To wit, in the grahayuddha. See ch. xvii. 9.

<sup>&</sup>lt;sup>5</sup> हतिकरो is, of course, an erratum for हितकरो.

<sup>&</sup>lt;sup>6</sup> Vithi or vithi is "an alley, a passage, a footpath." It denotes as well a parcel of a more extensive road (mdrga), as a small, narrow road. The translation attempts to mark the difference between vithi and mdrga by using the terms "path" and "road."

paths extend, each of them, over three lunar mansions, to

begin with Açvinî, and so on.1

2, 3. But (in our opinion) the wild elephant's path includes Svâti, Bharanî, and Krttikâ; the three following paths comprehend each three mansions, beginning with Rohinî.<sup>2</sup> In the cow's path lie Açvinî, Revati, and both Bhadrapadâs; in that of the old ox, Cravana, Dhanishthâ, and Catabhishaj; in that of the deer, Anurâdhâ, Jyeshthâ, and Mûla; Hasta, Viçâkhâ, and Citrâ make up the goat's path; the two Ashâdhâs form that of fire.

<sup>1</sup> This view is held by the authorities Devala and Kâçyapa. Comm.
নিখাৰ ইবৰ:

# अश्विन्यादि चिभाः सर्वा नागावा दहनानित्वाः। वीषयो भृगुपुत्रस्य नव प्रोक्ताः पुरातनैः॥

It is evident that this statement and the whole work ascribed to Devala, a Rshi in the proper acceptation of the term, a superhuman being, cannot have preceded Varâha-mihira for a long period, since the first Nakshatra in the enumeration is Açvinî. Moreover, the words प्रात्ताः पुरातने: are quite significant, though containing an inaccuracy, for the "Ancients" could not have begun with Açvinî. The same remark applies to the work fathered upon Kâçyapa, from which the following is quoted:

चिष्विश्वन्यादिषु यदा चरित मृगुनन्दनः।
नागवीयीति सा ज्ञेया प्रथमा न्या निवोधत॥
रोहित्यादि गजा ज्ञेया न्दित्यावैरावता सृता।
मघावा चर्षमा ज्ञेया हस्तावा गौः प्रकीर्तिता॥
जारद्गवी विश्वाखावा मूलावा मृगवीयिका।
ऋजवीयी विष्णुभावा पूर्वावा दहना सृता॥

Remarkable is here the use of गजा, दहना, च्रथमा, etc., instead of the derivatives, or of the compounds गजनीथी, etc. Varaha has imitated this in v. 3.

<sup>2</sup> Consequently, Rohinî, Mṛgaçiras and Ârdrâ form the Gajavîthî; Punarvasu, Pushya, and Açleshâ the Airâvatî vîthî; Maghâ, Pùrva and Uttara-Phalgunî the Vṛshabhavîthî. 4. Of these, the first three are in the northern road; the following three in the middle; the remaining three in the southern road; and each of them occupies the northernmost, middlemost, and southernmost part of each road.

¹ e.g. the Nâgav. is the northernmost in the Northern road; the Gajav. the middlemost in it, and so forth. The author has but partly followed Parâçara: तथाच पराशरः । अथ मार्गास्त्रधो भवन्ति । उत्तरमध्यमद्विणाः । पुनर्केकशस्त्रधा नव वीथय इत्याचचते । तचोत्तरे नागाजीरावत्यो मध्य ऋषभगोजरङ्गयो द्विणे मृगाजागिनकाः (v.l. ॰जदहनाः) । तासां नागा म्मन्ययाम्यवायवानि । गजवीथी रोहिष्णादीनि चीणि । चत्वारि परमैरावती । आर्षभा फल्लुन्यौ । गोवीथी प्राक्षेशिषपदादीनि चत्वारि । अवणधनिष्ठावाक्णानि जारङ्गवी वीथी। वाष्ट्रहस्तमाजी । मैचमैन्द्राग्नं मार्गिका । ऐन्द्रं मूलमषाढा च वैथानरमुक्ते । एवमेवेच्छन्ति ॥ The authority closely followed by our author is Garga: तथाच गर्गः ।

क्षत्तिका भरणी खाती नागवीथी प्रकीर्तिता।
रोहिखाबास्त्रिभासिसो गजैरावतकार्षभाः॥
आहिर्बुध्न्याश्विपौष्णञ्च गोवीथीहि प्रकीर्तिता।
प्रवणात्तितयं ज्ञेया वीथी जारद्रवीति सा॥
मैचात्तिभा मृगाखा खाडकचिचाविशाखिकाः।
प्रजवीथी तु दहना - षाढायुग्ममिति खृता॥
पूर्वोत्तरे नागवीथी गजवीथी तदुत्तरा।
एरावती तृतीया खादेतासूत्तरतः खिताः॥
प्रार्थभी च चतुर्थी खाद्रोवीथी पञ्चमी सृता।
पष्ठी जारद्रवी ज्ञेया तिसक्ता मध्यमात्रिताः॥
सप्तमी मृगवीथी खादजवीथी तथाष्टमी।
दहना नवमी ज्ञेया दिव्यं मार्गमाश्रिताः॥

This statement of Garga disagrees with another ascribed to him, and given here below.

5. Others say that the paths and roads are north, middle, or south, according as the junction stars of the mansions are in the north, middle, or south of the girdle of asterisms.

6. Some others again¹ define the roads in this way: the northern road commences with Bharanî (and goes to Maghâ included); the middle road begins with Pûrva-Phalgunî; the southern road extends from Pûrva-Ashâḍhâ (to the end of Açvinî).

7. (But enough); the science of stars is founded upon tradition, and where the authorities disagree it does not become us to make our own choice either way. My task is to men-

tion the different opinions.

8. The planet Venus setting or rising in the northern paths, produces abundance of food and happiness; in the middle paths, it has indifferent effects; in the southern ones, it has a miserable influence.

9. One may state the effects to be very excellent, excellent, a little less, indifferently good, middling, less than this, bad, miserable, and utterly miserable, in the northern paths, and so on, in succession.

10. The first division (of the cluster of Nakshatras) consists of the four mansions, Bharanî, Kṛttikâ, Rohinî, and Mṛgaçiras. It² brings abundance, but causes terror in the countries of Vanga, Anga, Mahisha, Bâhlika, and Kalinga.

## 1 Comm. तथाच गर्गः।

अश्वयुग्योगपर्यन्ते - षाढादौ नवके गणे। वर्तमानः सदा क्रूरो दिचिणे पिथ वर्तते॥ शुक्रो निर्ऋतिपर्यन्ते भाग्यादौ नवके गणे। वर्तमान्य मध्यक्षो मध्यमे पिथ वर्तते॥ भरखादौ मघान्ते च तृतीये नवके गणे। वर्तमानः शुभो चेय उत्तरे पिथ वर्तते॥

There is a considerable discrepancy between this passage of Garga's and the one quoted immediately before. The word मध्यक्ष in the second stanza means "indifferent, neuter, neither good nor bad."

<sup>2</sup> This is a very elliptical way of speaking for "the planet standing in this division."

11. If another planet overtakes Venus after the latter has risen in this division, it will destroy the kings of the Bhadrâ-çvas, Çûrasenas, Yaudheyas, and of Koṭivarsha.

12. The second division is made up of Ardra, Punarvasu, Pushya, and Açlesha; it brings immense rain and good crops; to Brahmans, especially to such as are cruel-minded, it is disastrous.

13. When Venus is assailed<sup>3</sup> in it by another planet, distress presses the barbarians, savages, horsekeepers, possessors of kine, the Gonardas, proletaries, Çûdras, and Videhas.

14. The planet if rising in Maghâ, Pûrva-Phalgunî, Uttara-Phalgunî, Hasta, or Citrâ (forming the third division), causes the loss of the crops, danger of famine, and robbery, the rise in rank of low-born people, and confusion of the different classes of society.

15. The same being checked<sup>4</sup> in Maghâ, etc., by another planet, strikes the shepherds, Çabara-savages, Çûdras, (barbarous) Puṇḍras, the savages of the western marches, the

# ¹ Utpala: अन्यो ग्रह आरोहेद्परि पतेत्। अग्रतसिष्ठतीत्वर्थः।

<sup>2</sup> The Bhadrâçvas are a mythical people, fabled to live in the remote East, or, according to the phrase of the astronomical Siddhântas, at 90° E. from Lankâ, in the region where Yavakoţi, "Java Point," is situated. (The r. Yamakoţi is erroneous, for Yama's kingdom is in the South, not in the East; and, besides, the compound Yamakoţi is devoid of sense.) The origin of the Bhadrâçvas dwelling near the Udayagiri may be traced, I think, to Rgveda, i. 115, 2, seq.

सूर्यो देवी मुषसं रोचमानां मर्यो न योषामश्वेति पश्चात्। यचा नरो देवयन्तो युगानि वितन्वते प्रति भद्राय भद्रम्॥ भद्रा अया हरितः सूर्यस्य चिचा एतग्वा अनुमावासः। नमस्यन्तो दिव आ पृष्ठमस्थः परि वावापृथिवी यन्ति सवः॥

<sup>&</sup>lt;sup>3</sup> The term dkramate—"jumps up against, assails, attacks, over-powers"—is synonymous with drohati (v. 11), "jumps upon, overtakes."

<sup>4</sup> Avashtabdha is another synonym to akranta and aradha.

Súlikas, the inhabitants of the Vanavâsin district, the Dra-

vidas and coasters.3

16. The three mansions, Svåti, Viçâkhâ, and Anurâdhâ, form the fourth division, which causes no danger, promotes abundance and prosperity amongst the nobility, but, at the same time, dissensions betwixt friends.

17. The planet, when assailed in it, is deadly to the chieftain of the Kirâtas, and crushes the Ikshvâkus, the savage border tribes, 4 the Avantis, Pulindas, Tanganas, and Çûra-

senas.

18. The five lunar asterisms, Jyeshthâ, Mûla, Pûrva-Ashâdhâ, Uttara-Ashâdhâ, and Çravana (which makes the fifth division), bring famine, robbers, and sickness, and annoy the Kashmirians, Açmakas, Matsyas, Avantis, and those that dwell along the banks of the Cârudevî.

19. In case of Venus being overtaken in this division, the Abhîras, Dravidas, Ambashthas, Trigartians, Surashtrians, and Sindhu-Suvîras are ruined, and the lord of Kâçi-country

will be killed.

20. The sixth division consists of the six Nakshatras, Dhanishthâ, Çatabhishaj, Pûrva-Bhadrapadâ, Uttara-Bhadrapadâ, Revatî, and Açvinî; it is a lucky one, rich in corn, teeming with wealth and flocks of cows, though, here and there, it is not exempt from perils.

21. Should Venus be overtaken in it, then the Sûlikas, Gandharians, and Avantis get afflicted, the King of Videha

<sup>&</sup>lt;sup>1</sup> This seems to be the preferable spelling.

<sup>&</sup>lt;sup>2</sup> Utpala takes व्नवासिन: here appellative, as व्नेचरा:; but this being a general term would include all tribes living in forests, consequently the Çabaras too. Cf. ch. xiv. 12; Mahâbh. ii. 31, 69; Lassen, Ind. Alt. vol. iii. p. 185 and 279.

³ Thus the scholiast: सामुद्राः समुद्रतीरवासिनः. Since सामुद्रा means maritimi, the word certainly may denote the coasters, but here we have rather to think of the islanders of the ocean. Cf. Mahâbh. ii. 31, 66.

<sup>&</sup>lt;sup>4</sup> Utpala: प्रत्यन्ता गहरवासिनः।

is killed; the forest tribes of the Borders, the Yavanas, Scythians, and servants 1 flourish.

22. The fourth and fifth divisions are happy in the west; the third division is so in the east. The remaining have such results as are mentioned above.<sup>2</sup>

23. Hesperus, when visible before sunset, bodes unsafety; when visible the whole day, famine and diseases; when seen with the moon at noon, he brings discord between the royal troops and the city.<sup>3</sup>

24. When the planet goes through the midst<sup>4</sup> of the Pleiads, then the earth will be equally covered by the streams, whose water-masses step out of the banks, so that heights and depths on her surface are no more discernible.

25. When Rohinî's Wain<sup>5</sup> is cleft (by Venus), the earth, being chequered with hairs and pieces of bones (of the slain

² i.e. the rising of the planet in the fourth or fifth division brings luck to the Western regions. With Paraçara the six divisions are termed आदा, रोहित, दारुण, विरोचन, ऊर्ध्वटण्ड, तीर्ण.

<sup>3</sup> The Comm. understands it to be discord between the king, the army, and the city.

<sup>4</sup> The term *cheda*, "cleaving, going through," might, if we had to do with its acceptation in scientific Hindu astronomy, be rendered by "occultation." See below, v. 28.

<sup>5</sup> The Wain of Rohini is cleft, i.e. undergoes occultation by a planet, when the latter, standing in the 17th degree of Taurus, has a southern latitude (vikshepa) of a little more than two degrees. Thus in Sûrya S. 8, 13, and in the two following passages, one from Brahmagupta, the other from Bhanubhatta—

तथाच ब्रह्मसिद्धाने ।
विचेपो : शदितयाद्धिको वृषभस्य सप्तद्शभागे ।
यस्य यहस्य याम्यो भिनत्ति श्रकटं स रोहिस्साः ॥
तथाच भानुभट्टः ।
वृषस्यांशे सप्तद्शे विचेपो यस्य दिचिसः।
ग्रंशदयाधिको भिन्द्याद्दीहिस्साः श्रकटं तु सः ॥

¹ Comm. दासाः वर्मवराः.

in battles), performs, as it were, the penance of "wearing skulls," as though she had committed sin.1

26. Venus, at reaching Mṛgaçiras, is said to be pernicious to essences and grain; by standing in Ardrâ, the planet hurts the Koçalas and Kalingas, and gives plenty of rain.

27. When the same stands in Punarvasu, the Açmakas and Vidarbhas suffer great distress; when in Pushya, there is copious rain, and warfare betwixt the hosts of the inhabitants of Fairyland.<sup>2</sup>

28. Venus, moving in Açleshâ, makes men suffer horribly from serpents. By cleaving the star Maghâ,<sup>3</sup> the same is

<sup>1</sup> This stanza of our author's is cited in the Pancatantra (i. st. 239), and that in a corrupt form.

<sup>2</sup> The Vidyâdharas are more especially the "wise" elves of Teutonic mythology; etymologically, the elves, Icel. Alfar (the Gothic form of which cannot be Albôs, as Grimm supposes in D. Myth. p. 248, but must have been Albĵus, sing. Albus), are the Skr. Rbhus, a word that likewise means "clever, skilful." King Alfred the Great, or, as the Northmen called him, Elfrâdr hinn Rîki, rightly bore his name, "having the wisdom of an elf."

<sup>3</sup> Utpala gives in a quotation the definition of the cleaving, alias occultation, of the junction star of Maghâ by a planet: भेद्बच्णं गणि-तकारिकाम्।

# कादयित योगतारां मानाधीनाधिकाञ्जविचेपात्। स्फुटविचेपो यसाधिकोनको भवति समदिक्सः॥

"The definition of the occultation of the star in question is, according to the scientific astronomers, as follows:" "A planet occults the junction star of Magha (Regulus) when its own rectified latitude, being in the same direction (north), is more than half the latitude, and less than one and a half the latitude of the star." From this we may deduce that the author of the stanza, whoever he may have been (probably Brahmagupta), had a still more accurate knowledge of the real latitude of Regulus than the Sûrya S. has, in which the latitude is stated to be 0. Another stanza defines the latitude of the Moon when causing the occultation of certain stars:

विचेपे - न्ये सीम्ये तृतीयतारां भिनत्ति पित्र्यस्य । इन्दुर्भिनत्ति पुष्यं पौष्णं वाक्षमविचिप्तः ॥ mischievous to the great treasurers (alias, prime ministers), but bestows much rain.

- 29. In Pûrva-Phalgunî the planet annihilates the savage Çabaras and Pulindas, and promotes the fall of rain; in Uttara-Phalgunî it brings rain and strikes the inhabitants of Kuru-field and Pancâla.
- 30, 31. By Venus standing in Hasta, the Kurus and painters suffer, and the rain is prevented from falling; in Citrâ, affliction comes to diggers of wells and to birds, but there will be a fine rain; in Svâti the rain will be plentiful, and distress reigns amongst messengers, merchants, and skippers; in Viçâkhâ also the planet gives nice rain, though merchants, to be sure, incur peril.
- 32. The planet, when in Anurâdhâ, occasions strife between the potentates; in Jyeshṭhâ, grief to great monarchs; in Mûla, to druggists and physicians; in all three there is drought.
- 33. In Pûrva-Ashâḍhâ, aquatic animals are vexed; in Uttara-Ashâḍhâ, diseases rage; in Çravaṇa, sickness of the ear prevails; in Dhanishṭhâ, danger awaits the infidels.<sup>1</sup>

34. In Çatabhishaj, Hesperus afflicts distillers; in Pûrva-Bhadrapadâ, gamblers from profession, as well as the Kuru-Pancâlas; at the same time he brings rain.

35. The same, when in Uttara-Bhadrapadâ,<sup>2</sup> damages fruits and roots, and, when in Revatî, such kings as are to undertake a campaign; when in Açvinî, horse-keepers; and, in Bharanî, the Kirâtas and Yavanas.<sup>3</sup>

"The Moon occults the third star of Maghâ when she has her greatest latitude north; so she does Pushya, Revatî, and Çatabhishaj, when she has no latitude." From this we must conclude that the third star of the mansion Maghâ is  $\eta$  Leonis.

<sup>1</sup> To understand the quibble, we must bear in mind that another name of Dhanishthâ is Çravishthâ, and that Bauddhas are Çrâvakas. Cf. ch. viii. 12.

² In the printed text ऋहि॰ is an erratum for आहि॰.

<sup>3</sup> We see that not only in the Ramayana the word Yavana is quibbled upon by being connected with योनि, for भर्यो is synonymous with, or

36. When Venus becomes visible, or sets on the 14th, 15th, or 8th of the dark half of the month, then the earth resembles one sea of water.

37. When Venus and Jupiter stand, one in the west, the other in the east, in the seventh asterism (alias, at six signs distance) from each other, then the people, oppressed with sickness, unsafety, and grief, look in vain for rain from the Rain-god.

38. When Jupiter, Mercury, Mars, and Saturn move, all of them, before Venus, then arise conflicts among men, dragons, and the inhabitants of Fairyland, and storms caus-

ing the downfall of all that is high.

39. Friends will be fickle in their friendship; Brahmans do not duly attend to their work; and not the slightest rain is granted by the Thunderer, who, with his thunderbolt, cleaves the tops of the mountains.

40. At Saturn advancing before Venus, the barbarians, cats, elephants, asses, buffalos, dark sorts of grain, hogs, Pulinda-savages, Çûdras and inhabitants of the Dekkhan, perish by the outbreak of ophthalmia and rheumatic diseases.

41. Venus preceding Saturn, destroys the people by fire, the sword, famine, drought, and robbers, and hurts movable and immovable things in this world, and the northern country, and the space around by fire, lightning, and dust.

42. The same staying behind Jupiter, ruins everything white, Brahmans, cows, temples, and the East; the clouds pour showers of hailstones; diseases of the throat prevail; but the autumnal corn will be plentiful.

43. Mercury standing before Venus, at rising or setting, brings rain, and occasions different kinds of jaundice of

at least figured by, **चानि**. That **भर्**णी once must have been a common word for womb may be safely inferred from the fact that **भर्**ण really occurs as partus, gestatio, Rgveda, x. 31, 6.

¹ The author "intimates herewith," says Utpala, "that one of them must be on the eastern, the other on the western horizon"—तेनैतउद्भा-पयति यथोदयास्त्रमय एवासक्तयोर्यं योग इति । नान्यथा । bilious origin,1 promotes the growth of summer corn, is deadly to monks, keepers of sacrificial fire, physicians, stage performers, horses, Vaiçyas, cows, kings along with their vehicles, to yellow things, and the West.

44. When Hesperus is red, like fire, there is danger of fire; when blood-red, the sword will rage; when pale, like a gold line on a touchstone, diseases reign; when greenish yellow or russet, asthma and cough rage; when ashy, coarse,

or dusty in appearance, no water falls from heaven.

45. But when the brightest of planets shows the hue of curdled milk, the white water-lily, or the moon, has distinct and far expanding rays, and a large orb, occupies a favourable position amid the stars, is free from unnatural signs and victorious,2 then it brings about a state of things similar to that in the Golden Age.

## CHAPTER X.

### Saturn's Course.

1. In staying in Çravana, Svâti, Hasta, Ârdrâ, Bharanî, and Pûrva-Phalgunî, Saturn, if bright, makes the earth to be covered with plenty of water.

2. The same, standing in Açleshâ, Çatabhishaj, and Jyeshtha, brings safety, but no abundant rain; in Mûla, he brings famine, the sword, and drought. I will also state the

effects (of Saturn) in each mansion separately.

3. By moving in Açvinî, Saturn destroys horses, grooms, poets, physicians, and kings' counsellors; by moving in Bharanî, dancers, musicians, singers, outcasts, and reprobates.

4. At Saturn standing in Krttikâ, such as are dependent upon fire in their profession (smiths, etc.) and generals

<sup>1</sup> The r. कामलां च is wrong; r. कामलांच with the Comm., or, as some MSS. have, वामलाञ्च.

<sup>&</sup>lt;sup>2</sup> A planet is styled "victorious" when it shows the signs enumerated in ch. xvii. 10.

suffer; so do the Kosalas, Madras, Kâçis, Pancâlas, and

waggoners during the planet's stay in Rohinî.

5, 6. The Vatsas, sacrificers, their employers, noblemen, and the inhabitants of the Middle-country suffer, when Saturn is moving in Mṛgaçiras; likewise the Pâratas, Râmathas, oilmillers, bleachers, and thieves, during the planet's stay in Ardrâ; so do the Panjabees, the inhabitants of the Western Marches, Surashtrians and Sindhu-Sauvîras, when Saturn stands in Punarvasu; and when in Pushya, bell-ringers, public criers, Yavanas, merchants, gamblers, and flowers.

7, 8. The planet's motion in Açleshâ causes affliction to aquatic animals or products, and snakes; in Maghâ, to the Bâhlîkas, Chinese, Gandharians, Sûlikas, Pâratas, Vaiçyas, to storehouses and merchants; in Pûrva-Phalgunî, to vendors of liquors, women of the town, damsels, and the Mahrattees; in Uttara-Phalgunî, to kings, sugar, salt, mendicant friars,

water, and the district of Takshaçilâ.

9. By the planet standing in Hasta, barbers, potters (or oil-millers), thieves, physicians, tailors, elephant catchers, harlots, the Kausalakas, and makers of garlands are afflicted.

10. When Saturn is staying in Citrâ, the same occurs to women, writers, painters, and variegated vessels; when in Svâti, to bards, spies, envoys, equerries, shippers, mimics, and such-like people.

11. By the planet's stay in Viçâkhâ, the Trigartians, Chinese, Kulûtas, saffron, lac, corn, madder, and safflower are lost.

12. When the planet stands in Anurâdhâ, the Kulûtas, Tanganas, Kashmirians, along with kings' counsellors, magicians,<sup>4</sup> and bell-ringers, come to grief, and discord arises between friends.

<sup>2</sup> Utpala: विचिचाणि नानाभाण्डाणि। बज्जवर्णानीत्यर्थ:।

Utpala differently: रसाः षड् मधुराम्बलवणकदुतिक्तकषायाः। एषां विक्रियिणः।

<sup>&</sup>lt;sup>3</sup> सूता: are, according to the Comm., सार्थय: कथात्रावका वा; they combine, however, both qualifications.

<sup>4</sup> Otherwise the Comm. चक्रचरैः कुस्मकार्प्रभृतिभिः।

13. Kings, priests, men honoured by kings, heroes, associations, families, and guilds come to grief by Saturn standing in Jyeshthâ; so do the Kâçis, Kosalas, Pancâlas, fruits, herbs, and soldiers, by his stay in Mûla.

14. When the planet is moving in Pûrva-Ashâḍhâ, the Angas, Vangas, Kausalas, Magadhas, Puṇḍras, Mithilas, the inhabitants of the district of Girivraja and Tâmaliptâ come

to grief.

15, 16. Saturn moving in Uttara-Ashâḍhâ, destroys the Daçârṇas, Yavanas, Ujjain, the Çabaras, the mountaineers of Pâriyâtra, and the Kuntibhojas; in Çravaṇa, judges, eminent Brahmans, physicians, chaplains, and the Kalingas. When the planet stands in Dhanishṭhâ, the king of Magadhâ conquers, and treasurers thrive.

17. During the planet's remaining in Çatabhishaj and Pûrva-Bhadrapadâ, some among the physicians, poets, distillers, traders, and politicians are distressed; so are rivers, cartwrights, women, and gold, by Saturn moving in Uttara-

Bhadrapadâ.

18. When Saturn is moving in Revatî, persons maintained by kings, the inhabitants of Kraunca-dvîpa, the autumnal

corn, Cabaras and Yavanas are crushed.

19. When Jupiter is moving in Viçâkhâ, while Saturn stands in Kṛttikâ, then most horrible calamity befalls the people; when both planets are staying in one mansion, there will be civil feud.

20. If Saturn is variegated, he destroys the birds; if yellow, he causes danger of famine; if blood-red, he threatens danger of the sword; and if ashy-coloured, he occasions many

quarrels.

21. If he is spotless bright, showing the lustre of the beryl, he brings good to the people. He is also auspicious if showing the hue of the blue Barleria and flax-flower. Agreeably to the statements of the Seers, Saturn is destructive to the members of such and such a caste, the colour of which he happens to assume.<sup>2</sup>

<sup>1</sup> नद्यों in the printed text is an erratum for नदी.

<sup>&</sup>lt;sup>2</sup> In the text पञ्चापि is an error for यञ्चापि.

#### CHAPTER XI.

### The Course of Comets.

1. After a previous study of the Course of Comets by Garga, Parâçara, Asita-Devala, and many other authorities, I undertake now to treat this subject in such a way as to remove perplexity.

2. The rising or setting of comets cannot be known by astronomical rule, as there are three different kinds of them;

celestial, atmospheric, and terrestrial.

3. Anything which, without fire, has an igneous appearance, is a species of blazing star, except glow-worms, meteors on the graves,<sup>2</sup> gems, jewels, and the like.<sup>3</sup>

4. Atmospheric lights are such as are (occasionally observed) on banners, swords, dwellings, trees, horses, elephants; celestial ones are seen among the asterisms. Such as do not belong to these two descriptions are terrestrial Ketus.

5. Some state that there are 101 comets; others, that there are 1,000; the Seer Nârada declares there is only one comet, which assumes different shapes.

6. What does it matter, whether there is but one or more?

<sup>1</sup> These are, according to Utpala, Kâçyapa, Rshiputra, Nârada, Vajra, etc. From Vajra very little is known. I surmise that it is synonymous with Parâçara (cf. Atharva V. 6, 65, 1) and Garga (see footnote at ch. i. 3).

<sup>2</sup> The term *piçûcâlaya* is, to my knowledge, nowhere explained. As the Piçâcas are supposed to have their favourite abodes in the cemeteries, I think that phosphorical phenomena so common in burial grounds are so termed.

<sup>3</sup> From this definition it appears that the term ketu admits of no exact rendering; generally it denotes "comets," but the terrestrial and atmospheric ketus are most likely phosphoric and electric phenomena, as well as falling stars and gaseous lights in morasses. I cannot forbear recalling to the memory of the reader the lines in Byron's "Manfred": "When the moon is on the wave," etc.

The effects, though, should at all events be told, along with their rising, setting, place, contact, hazy covering and colour.

7. The number of months wherein the comets show their influence is equal to the number of days during which they are visible; in the same manner the number of years corresponds to that of months. The effects begin to take place after forty-five days.

8. A comet which is short, small, serene, glossy, not crooked, white, and appearing but for a short time, or only perceived just rising, brings abundance and happiness.

9. If a comet shows an appearance the reverse of the forementioned, it is not auspicious, especially if it resembles a rainbow, or has two or three crests.<sup>3</sup>

10. Twenty-five comets with crests, and shining like a necklace of pearls, jewels or gold, are termed "the Kiranas." They are visible in the eastern and western region, and occasion quarrels amongst sovereigns. They are the offspring of the Sun.

11. Even as many stars resembling in colour to parrots, fire, the Dophariya-flower, lac or blood, are visible in the south-west, boding danger of fire. They are the sons of Fire.

12. As many others, with crooked crests, and rough and

1 The Comm. confesses that the statement is not very clear—ग्रन सन्देहञुदासार्थ गर्गोत्तं नियामकमभिज्ञिको ।

> यावन्यहानि दृश्यः खात् तावनासान् फलं भवेत्। मासांसु यावदृश्येत तावन्तो न्व्दास्तु वैक्रताः॥ चिपचात्परतः कर्म पच्यते न्ख सुभासुमम्। सवस्क्रमुद्दिते केती फलं नेहादिशेद्धुधः॥

2 Utpala r. अभिवृष्ट:, and explains तिसांसु दृष्टमाचे यदि वृष्टिर्भवति।

3 i.e. in common parlance, "tail."

<sup>4</sup> Utpala remarks that the whole number of them is not visible at the same time, but each of them separately. This rule is of general application: एतेषां मध्यादेक एव दृश्यते। न सर्वे युगपदिति सर्वेचेयं परि-भाषा।

dark, appear in the south. Being the sons of Death, they forebode pestilence.

13. Twenty-two stars, radiant, but without crest, in appearance round, like a mirror, and resembling water or oil, visible in the north-east, are the children of Earth, and threaten with famine.

14. Three comets shining like to moon-light, silver, hoar-frost, the white lotus or jessamine, show themselves in the north. They are the sons of the Moon, and bring plenty.

15. There is a single comet, with three crests and three colours, the offspring of the Creator. Know that this star, which may rise in any quarter, is called "Brahma's rod," and foretells the end of the world.

16. Herewith are enumerated the 101 comets.<sup>1</sup> I shall now proceed to indicate the tokens by which the 899 (other) comets may be clearly recognized.

17. In the north and north-east rise the so-called eighty-four comets, the sons of Hesperus. They show large and white stars, a soft brilliancy, and produce hard effects.

18. Sixty stars, termed "the Gold comets," children of Saturn, are glossy, resplendent, and double-crested. They may appear in any quarter, and have a most deleterious influence.

¹ The same number is given by Paraçara; yet the enumeration differs in detail: तथाच पराग्र:।ग्रतमेकोत्तरं केतृनां भवन्ति। तेषां षोडग्र मृत्युनि:श्वासजा द्वाद्गादित्यसभवा द्य दचमखिवलयने स्द्रक्रोधजाः सप्त पैतामहाः पञ्चद्य चर्षेरौद्दालिकस्य पुनाः सप्तद्य मरोचिकश्चप-ललाटजाः पञ्चच प्रजापतिहासजाः। चयो विभावसुसुताः। धूमो-द्ववश्चकः। चतुर्द्य मध्यमाने मृते सोमेन सह सभूताः। एकसु ब्रह्म-कोपजः। द्ति॥ The Rshi Auddâlika is only another form of Uddâlaka, for in mythology father and son, i.e. the earlier and later phases of the same phenomenon, get naturally confounded. Çveta-ketu, "the white comet," the well-known fabled teacher in the Upanishads and Brâhmaṇas, is, as the name by itself clearly shows, a star, and not a man. Cf. v. 37 below.

19. The "hairless" comets, the offspring of Jupiter, have no crest, and one bright nucleus. These, sixty-five in number, are fulgent, appear in the south, and are of evil augury.

20. The fifty-one, named the "Thieves," sons of Mercury, are faint, not very clear, long and white; they may rise in

any direction, and produce evil effects.

21. Ill-omened, too, are the children of Mars, sixty in number, who look like blood or fire, and show three crests and three kernels. These, styled the "Saffron-coloured" comets, are visible in the north.

22. The thirty-three sons of Râhu, nominated the "Opacous wedges," show themselves on the disk of sun and moon. What they presage, has been told in the chapter headed—The Sun's Course.

23. A hundred-and-twenty others, called the "Omniform" comets, are the offspring of Fire. They are enwrapt in a blazing circle, and occasion dreadful fires.

24. Seventy-seven comets, of dark red hue, without a nucleus, with diffuse rays, and in the shape of chowries, are the sons of Air. These, known by the appellation of the "Red," are rough in appearance, and bring evil.

25. Eight other comets, named the "Heap," because resembling a cluster of stars, are children of the Creator. The 204, called the square comets, are likewise his offspring.<sup>2</sup>

26. Thirty-two, sons of Varuna, termed the "Herons," have the shape of a bamboo or shrub. These, brilliant as the moon, are said to have cruel effects.

27. Ninety-six, styled the "Trunks," as bearing the shape of headless bodies, are children of Time. These comets, whose nucleus lacks distinctness, are malign and dreadful.<sup>3</sup>

28. The nine comets, rising in the nine quarters, show one bright and great star. So much for the general description of the thousand comets; I shall now enter into details.

<sup>1</sup> ch. iii. 7.

<sup>2</sup> It is to be understood, as the scholiast adds, that these have an evil influence: पापफला एव जेया:। ते चाजेयदिकसम्भवाः

<sup>3</sup> Utpala follows another reading (see Var. Lect.) and explains accordingly, "bring safety to the Pundras."

29. The Fat comet rises in the west, stretching far to the northward; is large and of glossy appearance. It causes

instant mortality, yet egregious abundance too.

30. The Bone comet, having the same characteristics, save that it is rough, is said to bring frightful famine. Another, known as the Sword comet, having the same appearance. except that it is smooth, and rises in the east, occasions affrays and pestilence.

31. The Skull comet, with purple-tinged rays and crest, becomes visible at the day of new moon, in the east, and extends its course through half the heavens; it causes famine,

mortality, drought, and sickness.

32. The comet of Rudra rises in the east, on the path of Fire, with a crest in the shape of a trident, and with a blackish, rough or red glare. It extends its course over a third part of heaven, and has the same effects as the former.

33. In the west rises the Movable comet, whose crest is an inch high, and turned to the south. It is steadily in-

creasing in length the more it proceeds to the north.

34. As it has come near the asterism of the Great Bear. the pole-star and Abhijit (Vega), it goes back, and having moved through half the firmament, sets in the south.

35. It will destroy the country from Prayaga, on the Ganges, as far as Ujjain and Pushkararanya,2 and northwards up to the river Devikâ, along with the greatest part of the middle country.

36. Some parts of other countries, too, will be stricken by diseases and famine. Its influence will be felt for ten

months, or, according to others, for eighteen.

37. The White comet will be visible in the east, at midnight, with a crest pointing to the south, and another, named Ka,3 resembling a yoke, in the west. Both will be seen at the same time, during seven days.

<sup>1</sup> In the printed text r., of course, वैश्वानर. As to the path of Fire, cf. ch. ix. 3.

<sup>&</sup>lt;sup>2</sup> The erratum in the text needs scarcely to be pointed out.

³ In Paraçara is added, "Ka, the son of the Creator," क: प्रजा-

38. Both bring plenty and luck, if they be smooth. Should Ka be seen for a longer period, then he bodes distress from the fury of the sword during ten years.

39. When the White comet resembles a tuft of hair, is rough and darkish, and when, after moving through a third part of the firmament, it retrogrades from right to left, then it destroys two-thirds of the population.

40. A hairy star with purple-tinged crest, becoming visible near the Pleiads, is known as the Radiant comet. It has the

same effects as the last-mentioned.

41. The Dhruva-ketu<sup>2</sup> has no determined course, dimension, colour, or form, and may appear in any direction, as well in the heavens as in the sky, or on the earth. If fulgent, it has agreeable results.

42. But the princes on whose warlike equipments,<sup>3</sup> the countries on whose dwellings, trees, and hills, and the house-holders on whose implements this luminary is seen, are doomed

to destruction.

43. The comet termed the Water-lily, as bearing the hue of that flower, appears for one night in the west, with its crest tending to the east. It brings surely uncommon abundance throughout ten years.

44. The Gem comet, visible but once, for the space of one

पतिपुत्रः, and Çveta-ketu bears the surname of Uddâlaka: तथाच पराग्ररः। त्रथोहाजनस्वतनेतुर्दशोत्तरं वर्षश्रतं प्रोष्य भटनेतोसारानेत पूर्वस्थां दिशि द्विणाभिनतिशिखो -र्धराचनानेत दृश्यः। तेनव सह दितीयः कः प्रजापतिपुत्रः पिसमेन यहनेतुर्यूपसंस्थायी युगपदृश्चेत। ततस्वानुभौ सप्तराचदृश्चौ दश्र वर्षाणि प्रजाः पीडियतः॥ Cf. v. 16.

1 Utpala: अपसव्यम् अप्रद्तिणं। वामभागे विनिवृत्तिं वरोति।

<sup>2</sup> The rendering would be "the firm, fixed comet," but this does not agree with the description. It may be supposed our author followed a corrupt reading, for Paraçara calls this comet Dhûma-ketu.

<sup>3</sup> Utpala: सेनाङ्गेष्वश्वोपकर्णेषु खलीनपर्याणादिषु. This definition seems too narrow, since horses and elephants themselves are reckoned to belong to the सेनाङ्गानि. Cf. Amara-kosha, ii. 8, 2, 1.

watch, in the west, has an extremely faint nucleus; its crest is right and white, like a drop of milk from a woman's breast.

45. At rising it brings abundance for four months and a half. Sometimes, however, it gives rise also to the prevalence of noxious animals.

46. The Water comet appears likewise in the west; it looks glossy, and wears its crest erected in a westerly direction. It produces for nine months plenty and tranquillity among mankind.

47. The Bhava-ketu, showing a faint nucleus, and shedding a soft lustre, is visible for one night in the east. Its crest, turned to the right, is like a lion's tail.

48. One may predict uncommon abundance during a number of months, corresponding to that of hours for which the star continues visible. In case the comet looks rough, one may expect deadly diseases.

49. The Lotus comet, white, like the fibre of the nymphea, will be seen for one night in the west; it brings plenty and

joy during seven years.

50. The comet styled Avarta rises in the west, at midnight, shining bright, red-coloured, and with its crest turned southward. The abundance caused by it lasts as many months as is the number of hours the star is visible.

51. Another, styled Samvarta, bears a purple red crest, and shows itself at twilight, in the west. After percurring a third part of the heavens, this horrible comet makes a stand, showing a crest in the shape of a trident.

52. Throughout a number of years, equal to that of hours it is visible, it will slay monarchs by the sword, and vex the

asterism in which it rises.2

53. Now I shall set forth which kings are killed, if an asterism is touched or wrapped in haze by any other but auspicious comets.

54. A malign comet in Açvinî will strike the ruler of the

## <sup>1</sup> Comm. सव्यशिखो दिचणदिगात्रितः।

<sup>&</sup>lt;sup>2</sup> The consequence of which is that those who stand under the influence of the particular asterism will suffer at the same time.

Açmakas; in Bharanî, of the Kirâtas; in Krttikâ, the sovereign of Kalinga; in Rohinî, the chieftain of the Çûrasenas.

55, 56. Such a one in Mṛgaçiras, destroys the king of the Uçînaras; in Ârdrâ, the chief of the Fishermen; in Punarvasu, the lord of the Açmakas; in Pushya, the governor of Magadhâ; in Açleshâ, the lord of the Asikas; in Maghâ, the king of Anga; in Pûrva-Phalgunî, the sovereign of Pândya; in Uttara-Phalgunî, the king of Ujjain; and in Hasta, the chief of the Dandakâ district.

57. When a comet hurts Citrâ, those who are well up in the lore may predict the death of the ruler of Kuru-field. The kings of the Kashmirians and Kâmbojas are annihilated, in case an evil comet stands in Svâti.

58. If such a one stays in Viçâkhâ, the sovereigns of the Ikshvâkus and of Alakâ² are killed; if in Anurâdhâ, the Pundra chieftain; and if in Jyeshthâ, the emperor is slain.

59, 60. Through an evil comet in Mûla, the king of Andhra, as well as he of the Madrakas, finds his death; by one in Pûrva-Ashâḍhâ, the potentate of Kâçi. One in Uttara-Ashâḍhâ, will kill the monarchs of the Yaudheyas, Ârjunâ-yanas, Çibis, and Cedis; in Çravana and the five following, successively, the chief of Kekaya, the Panjâb, Ceilon, Vanga, the Nimisha district and Kirâtas.

61. A comet whose crest is touched by a meteor is auspicious; still more auspicious one at whose appearance rain falls,<sup>3</sup> although it bodes ill luck to the Colas, Afghans, white Huns, and Chinese.

62. Countries lying in the direction where the crest of a

<sup>1</sup> Utpala places them in the East : प्राग्देशवासिन इत्यर्थ:।

<sup>&</sup>lt;sup>2</sup> The r. of the Comm. द्वानुर्वनायो, incautiously rejected by the editor, seems preferable. It is passingly strange to find an Alaka mentioned as if it were different from Alaka ruled by Kubera, but a people of the name of Ralaka is as yet wholly unknown. The scholiast says only: अवनानगरी तन्नायो राजा।

³ The scholiast r. श्राभिदृष्ट:, and explains accordingly, उद्तिमाच एव दृष्ट: "just seen at rising."

comet is bent or pointing to, and those whose presiding asterism is touched by a comet, are struck down by heaven's power. When a monarch attacks them, he will take possession of the goods of hostile kings, like the eagle preys upon the coils of the snakes, his enemies.

### CHAPTER XII.

The Course of Agastya (Canopus).

[Succinctly is here treated the course of the Seer Agastya, the purifier of the waters, him who checked the Vindhya mountain in rearing its head as a hindrance to the Sun's course; him who devoured the demon Vâtâpi, that had split the loins of many Seers; him, the ocean of purity, by whom the ocean was swallowed 2 and the southern quarter adorned.]

- 1. It is he who, in the days of yore, at once heightened the splendour of the ocean, by causing the water to vanish: the rocky peaks, scooped out by the claws of sea-monsters, were no longer covered with waves, but with a rolling tide of the choicest gems and jewels, blended with dropping pearls, as if to abash the gods with their bright jewelled crowns.
- 2. It is he who increased the magnificence of the sea, although he bereft her of the water, since the treeless cliffs showed coral-trees, precious stones, and jewels, and glittering snakes coming forth in long rows.
  - 3. It is he who, by swallowing the waters of the great

<sup>2</sup> The myths alluded to are so well known, chiefly from the Râmâyana and Mahâbhârata, that they require no other indication.

<sup>1</sup> i.e. in common parlance, "bright Canopus." Agasti, of which agastya is a produced form, is derived with suffix (or seeming suffix) asti, like gabhasti, from the base aj, anj, "to brighten," a meaning especially apparent from আন, আনি. Thus agasti signifies bright, shining. From the same base is আৰি "fire," আজি "an ornament," and probably আনু, as well as Greek àctis.

ocean, brought it to grief, but, at the same time, to a state of lustre, such as immortals only know, through the sparkling dolphins, water-elephants, serpents, and the jewels scattered round about.<sup>1</sup>

4. The ocean, bereft, indeed, of its water, but covered with floundering dolphins, pearl-oysters, and conch-shells was lovely as the lake in autumn, with its rippling waves, water-lilies, and swans.

5. It is he who made the sea shine as heaven, with dolphins for its white clouds, with precious stones for stars, with crystal for its moon, with its drained bottom for a serene harvest sky, and with the radiant gems in the hoods of snakes for comets

and planets.

6. The Vindhya stands raising its shaking summits, in order to mar the road to the Day-god's chariot; like banners gaily float on high the garments which support the disturbed Elves (in moving through the sky), who are eagerly pressing to their bosom their dear loves clinging to their shoulders; the mountain waterfalls, issuing from the caves, are haunted by lions, from whose heads hang, like chaplets of blue Barlerias, clusters of bees following the scent of the elephant's frontal juice mingled with the quaffed blood; it seems as if

¹ The scholiast understands प्रसुत्तिमिजलेभिजिह्नगः to have a double meaning: the first and natural one as rendered above; the other, as referring to अमरश्री, as follows: तथा सुरलोकः प्रसुत्तिमिजलेभिजिह्नगः। प्रसुत्तिमजलेभिजिह्नगः। प्रसुत्तिमजलेभिजिह्नगः। तिमिगा मत्स्ववाहनाः किचित्। यथा वितस्ता नदी। किचिज्जलगाः पानीयस्थाः। यथा समुद्रे भगवाद्वारायसः। केचिद्भगा हस्तिनां पृष्ठगताः। यथेन्द्र ऐरावस्थः। केचिज्जिह्नं कृटिलं गच्छन्तिति जिह्नगाः कृटिलगतयः। यथा भौमादयस्तारायहा वित्रताः॥ Now, waiving some minor points, e.g. the inaccuracy of identifying prasphurat with calat, it will be observed that the animal on which an image is represented to sit has little to do with the god's श्री; most certainly the retrogradation of Mars does not show his श्री. In short, the second explanation is devoid of meaning.

the mountain is to touch the roof of the sky with his reared rocky tops, where hyenas, bears, tigers, and monkeys dwell, and crowds of inebriated bees, troubled and startled by the elephants pulling down the blossoming trees, tune their humming sounds; the Narmadâ embraces, like a loving damsel in amorous sport, the mountain, where immortals frequent the pleasure-grounds, and sages live without other food but water, roots, and air. Such was the Vindhya, when he was stemmed by Agastya. Listen ye now to the description of the Seer's appearance.<sup>1</sup>

7. At the rise of Agastya, the waters, which (during the rains) have grown soiled, through the contact with mud, become clean spontaneously, like the heart of the virtuous.<sup>2</sup>

8. Autumn,<sup>3</sup> by nurturing a row of noisy swans flanked on both sides by ruddy geese, shines like a smiling lady showing her (white) teeth, whose extremities are tinged red by the use of betel.

9. Dazzling, like a dexterous damsel, who intimates her

The rise of Canopus must have been celebrated already in Vaidic times, as may be gathered from Rgveda i. 170 and 180, 8, in which latter passage the Açvins, the geniuses of the year, are invocated as bestowing the boon of Canopus' rising. In the same manner the Açvins restore youth to Cyavana or Cyavana (alias Bhṛgu's son), i.e. Bhṛgu (Hesperus) is born again as Bhṛgu-putra (Lucifer).

² कुसमायोगमजप्रदूषितानि has a double meaning. As attribute to हृदयानि it is "defiled by contact with the wicked;" कुसमा is "bad soil, mud;" कुसमा: is "wicked men," or, as Utpala expresses himself, कुत्सिता जना:. As to the idea expressed in the stanza, cf. Râjatarangiṇî, 3, 327; 2, 144. Agastya's purifying influence on the mind seems to be hinted at also in Rgveda i. 179, 5 (an Agastya hymn, however fragmentary),

## यत्सीमागश्रवमा तत् सु मृळतु पुलुकामो हि मर्ळः

His beneficent influence is mentioned in the subsequent stanza:

# उभी वर्णावृषिरयः पुपोष सत्या देवेष्वाशिषो जगाम

³ As well in this couplet as in the next following, we have to r. श्रत् with the MSS., in lieu of सर्त.

love by knitted brows and side glances, is Autumn adorned with a cluster of hovering bees, while she abounds in white water-lilies, blooming near blue lotuses.<sup>1</sup>

10. As if desirous of beholding the lustre the Moon has assumed after the disappearance of the rainy clouds, the pond with its eddying waves opens at night its eyes, the water-lilies, whose petals cover black bees as beautiful lashes deck eyes with dark pupils.

11. The earth, replete with pools that abound in a motley variety of lotuses, swans, ruddy geese and ducks, presents, as it were, a hospitable gift of jewels, many flowers and fruits to Agastya.

12. The water which has been poured out at Indra's command by the snakes, whose bodies are wrapt in the clouds, and thus has been stained by burning poison, becomes pure at the appearance of Agastya.

13. He, Varuna's son, removes sin, even when he is remembered, how much more when he is praised. How he ought to be honoured has been taught by the Seers, which I here repeat for the king's sake.

14. The heliacal rising of Agastya for each country must be found and stated by the astronomer through calculation. Now, for Ujjain, this takes place, when the true place of the sun is seven degrees short of Virgo.<sup>2</sup>

15, 16. At the time when the rays of morning just pierce through the nightly dark, the king, after being shown by the astrologer the point of Agastya's rising, should reverentially

¹ As the translation does not clearly mark the corresponding parts of the comparison, I subjoin part of the Comm.: अनेन (i.e. with इन्हों वर् and सितोत्पन्न) नेचस्य सादृश्यमुत्तं। यतो नेचं मध्यभागे कृष्णमुभयपा-र्श्वयोः सितं भवति; and anon; अनेन (i.e. भ्रमत्षट्पद्पङ्कि) भूसा-दृश्यमुत्तं। यतो नयनस्थोर्ध्वभागस्था भूनता भवति। अत एवोत्प्रेन्धते सभूनता, etc.; the latter is not sufficient. The विभ्रम (कटाच, etc.) of the black eyes is compared to the विभ्रम of black bees.

<sup>&</sup>lt;sup>2</sup> Colebrooke has copiously commented on this passage, Misc. Essays,

lay down on earth, in honour of the guest, his gift, consisting of fragrant flowers and fruits of the season, of jewels from the sea, of gold, garments, a milch-cow, a bull, milk porridge, eakes, curdles, barley-corns, fragrant incense, and salves.

17. When the king, with belief in his heart, offers this gift, he will be freed from sins and conquer his enemies; and if he bring the oblation duly during seven years, he will acquire dominion over the sea-girdled earth.

18. A Brahman, offering a gift according to what he chances to possess, obtains knowledge of the scriptures, wives, and offspring; a Vaiçya acquires land; a Çûdra, great wealth; and all shall obtain health and the reward of their deserts.

19. When Agastya looks rough, he causes diseases; when russet, drought; when purple-tinged, harm to cows; when twinkling, perils. When he shows the colour of madder, he brings famine and battles; when he seems small, he forebodes that the town shall be beleaguered.

20. But if, shining like gold or crystal, he refreshes, as it were, the earth with streams of light, then the country will have plenty of food and teem with a contented and healthy population.

ii. p. 353, seq. (As. Res. ix.). The passage from the Pancasiddhântikâ, referred to by Colebrooke, as analogous to one in the Bhâsvatî, is:

विषुवच्छायार्धगुणा पञ्चक्रतिस्तत्कलास्ततसापम् । हायाचिसप्तकयुतं द्शभिर्गुणितं विनाद्यस्ताः ॥ ताभिः वर्कटकाद्यादाद्यग्नं तादृशे सहस्रांशी । याम्याशावनितामुखविशेषतिकको मुनिर्गस्यः ॥

'Multiply half the length of the equinoctial shadow by 25; take from this product, expressed in minutes, the corresponding arc; add the length of the shadow multiplied by 21; multiply by 10; this gives the number in Vinâqîs. At this number, reckoning from the beginning of Cancer, stands the sun, when Agastya rises in the south, like a mark on the front of a damsel."

21. Agastya brings danger of famine and pestilence, when hurt by a meteor or comet. He rises (thus it has been said of yore) when the sun is standing in Hasta, and sets when the sun has reached Rohinî.<sup>1</sup>

### CHAPTER XIII.

The Course of the Seven Seers (Great Bear).

1, 2. I shall tell, according to the theory of Vrddha-Garga, the course of those Seven Seers by whom the northern region is, as it were, protected; through whom she shines, as if adorned with a string of pearls, like a maiden with joyful countenance, wearing a wreath of white water-lilies; those Seven Seers by the turning round of whom the northern region seems dancing, the pole-star being the regulator.

3. The Seven Seers were in Maghâ, when king Yudhishthira ruled the earth, and the period of that king is 2526

years before the Çâka era.2

4. They remain moving for a hundred years in each lunar

¹ See Colebrooke, i.e. His statement that there are three periods of rising and setting, according to Utpala, is not quite exact. On the contrary, Utpala expressly intimates that the rising of Canopus, when the sun stands in Hasta, is contrary to science, and only repeated by the author out of deference for the Ancients. He says किलेखागमसूचने, which is quite true; where our author uses किल, it is so much as relata refero; यद्यचापि गणितसाम्यं न भवति। तथाप्याचार्येण पूर्वभाष्ट्रस्थात् कृतम्। The three periods of rising are enumerated by Paraçara, as quoted by Utpala. Here part of the passage: तथाच पराभरः। इसस्थे सवितर्युदेति रोहिणीसंखे प्रवस्ति। अथास्य विविध्यारियकालो दृष्टः। आश्रयुगबङ्गलाष्ट्रमीपञ्चद्रस्थाः कार्त्तिकाष्टम्यां वा। तवाश्रयुगबङ्गलोदितः सुवृष्टिचेमाझसम्पत्करः। इ॰ आ॰

<sup>&</sup>lt;sup>2</sup> This stanza is quoted by Kahlana in his Raja-tarangini, i. 56.

mansion, and rise constantly in the north-east, together with Arundhatî.<sup>1</sup>

5, 6. At the eastern extremity stands Marîci; next to him in westerly direction is Vasishtha; next to whom Angiras; then Atri, next to whom Pulastya, Pulaha, and Kratu, in regular succession, beginning from the east. Arundhatî, that pattern of spouses, is seen next to Vasishtha.<sup>2</sup>

7. When these luminaries are pale, devoid of beams, faint or vexed by meteors, thunderbolts, haze, and such-like, they will destroy each their own dependency; on the contrary, they tend to make the same prosper, in case they seem large

and bright.

8. Marîci is understood to have power of doing harm to Gandharvas, gods, demons, spells, herbs, angels, goblins, dragons, and elves.

1 Cf. Colebrooke, Misc. Essays, ii. p. 356. The other reading of the latter part is rendered by Colebrooke, "Being connected with that particular Nakshatra, to which, when it rises in the East, the line of their rising is directed." This does not agree with the Sanskrit words, as given by Colebrooke in a foot-note, but these are evidently misprinted. One MS. of the Comm. has: प्रागुद्यतो =प्यविवरादृजूनयं खनसंयुक्ताः, the interpretation of which is: ऋविवरात निरन्तरं। प्रागुद्यतः प्राक् पूर्वस्यां दिश्युद्यतो यज्ञचचं तेषां (!) ऋजूज्ञयन् सप्टतां सप्तिषपङ्गा नयति। तच तसिम्चचचे संयुक्ताः स्थिता इति। एतदुक्तं भवति। [यस नचर्न तेषां स प्रागुद्यतः सप्तर्षिपङ्किः स्पष्टा भवति] तसिन्नेव स्थिता इति ॥ Text and commentary are corrupted and adulterated ; so much is certain, whereas Colebrooke's rendering cannot but express the purport. Now, we have to r. ॰ यत्सू वसंयुक्ताः in the text, for स्त and सू are regularly confounded; in the Comm. तेषां is, in both instances, an error for रेषा (रेखा), and this the word by which सूत्र of the text was rendered. The passage is debased to such an extent that the hand of Utpala is only partially visible.

<sup>2</sup> Consequently, the stars  $\alpha$ ,  $\beta$ ,  $\gamma$ ,  $\delta$ ,  $\epsilon$ ,  $\zeta$ , and  $\eta$ , of the Great Bear, correspond to Kratu, Pulaha, Pulastya, Atri, Angiras, Vasishtha, and Marîci. Arundhatî must be the small star near  $\zeta$ , called Alcor or g.

<sup>3</sup> Mentioned in the subsequent verses.

9. Vasishtha, when hurt, is deadly to the Scythians, Yavanas, Dards, Pâratas, Kâmbojas, and hermits living in the wilderness; he gives prosperity, when he is radiant.

10. Scholars, wise men, and Brahmans are enumerated as belonging to Angiras; and foresters, aquatic produces, the

sea and rivers are allotted to Atri.

11. To Pulastya are said to belong giants, devils, children of darkness, fiends and serpents; to Pulaha, roots, and fruits; and to Kratu, sacrifices and sacrificers.

### CHAPTER XIV.

### Division of the Globe.1

1. Each group of three lunar mansions, to begin with Kṛttikâ, forms a ninth of the whole series; to each of these groups corresponds a part of the countries, the division of which begins at the centre in Bhârata-varsha, proceeding hence to the eastward, south-eastward, and so forth.<sup>2</sup>

1 The word kûrma is the specific Sanskrit form of a word once common to all Indo-European tongues, viz. kurma, Lat. culmus, Teuton. holm, etc. It does not originally denote the "tortoise" itself, but its back, for the proper meaning is "mound, buckle, half-globe, holm." Even in Sanskrit, in such compounds as kûrmonnata, the word signifies the form of the back of the tortoise. At the time when the term affection became current, kûrma was taken in its proper sense. Yet in later times they wholly mistook the meaning, and made an absurd drawing, representing a tortoise, as if kûrma could denote a level! The rendering by "globe" is not wholly exact, since properly only a half-globe, a holm, is supposed to be raised above the waters. Cf. Ind. Stud. x. 209.

<sup>2</sup> The astrological use of this partition is, that, a particular group of Nakshatras being vexed, the corresponding group of countries suffers too, or, as Garga puts it:

क्रित्तकावस्त्रिनचचो मध्यदेशे गणे यदा।
पापैक्पहतो हन्ति मध्यदेशे - खिलांखदा॥
रौद्रादिको हन्ति पूर्वा सापीवः पूवर्दिणाम्।
त्रार्थम्णावस्त्रया याम्यां खात्यावो दिविणापराम॥

- 2, 3, 4. The centre is formed by the Bhadras, Arimedas, Mâṇḍavyas, Sâlvas, Nîpas, Ujjihânas, Sankhyâtas, Marwâr, the Vatsas, Ghosha, those who dwell along the banks of the Jamnâ and Sarasvatî, the Matsyas, Mâdhyamikas, Mathurese, Upajyotisha, Dharmâranya, the Çûrasenas, Gauragrîvas, Uddehikas, Pâṇḍus, Guḍas, Açvatthas, Pancâlas, Oudhe, the Kankas, Kurus, Kâlkoṭe, the Kukuras, Pâriyâtra-hills, Udumbaras, Kapishṭhalas, and Hastinâpura.
- 5, 6, 7. In the east are situated the four mountains, named Anjana, Vṛshabhadhvaja, Padma, and Mâlyavat; then the Vyâghramukhas,¹ Suhmas, Karvaṭas, Candrapur, the Çûrpakarṇas, Khasas, Magadha, Mount Çibira, Mithilâ, Samataṭa, Orissa, the Açvavadanas, Danturakas, Prâgjyotisha, the Brahmaputra,² the Milksea, the Ocean, the Cannibals, the Mountain of Sunrise, the Bhadras,³ Gauras,⁴ Pauṇḍras, Ut-kala, Kâçi, Mekala, the Ambashṭhas,⁵ the one-footed people, Tâmaliptikâ, the Kausalakas, and Bardwân.
- 8, 9, 10. In the south-east are Kosala, Kalinga, Vanga, Vanga minor, the Jathara-Angas, Saulikas (or Maulikas?), Vidarbha, the Vatsas, Andhra, Cedi, the Ûrdhvakanthas, the
- 1 i.e. "tiger-faced men;" most likely a mythical people, as well as the Açvavadanas ("horse-faced beings," with Parâçara: Vâjimukhas), the Ίπποπροσωπο of the Periplus Maris Eryth.
- <sup>2</sup> Whether the term Lauhitya or Lohitya properly should be applied to the river seems doubtful. Probably the name of the stream was Lohita, "Red river," whereas the people in its vicinity or some district near it, were called Lauhitya. One MS. of the Comm. has actually जोहितो नदः, another, however, जोहित्यो नदः.
- <sup>3</sup> i.e. "the Blessed," probably the same with the Bhadraçvas. Cf. ch. ix. 11.
- <sup>4</sup> i.e. "the Whites," supposed to live in Çvetadvîpa, which, according to Kathâsaritsâgara 54, 18, 199, lies near the Cocoa-island. See the first note of the next page.
- <sup>5</sup> These are the Ambastæ of Ptolemy, vii. 1, 66, seq., not to be confounded with their namesakes in the North-West. Cf. Lassen, Altert. iii. iii. p. 174, seq.

Island of Bulls, of Cocoas,¹ of Tree-barks, the inhabitants of the recesses of the Vindhya-range, Tripurî, the Çmaçrudharas, Hemakuṇḍya,² the Vyâlagrîvas (i.e., beings with snake necks), Mahâgrîvas (i.e., people with long necks), Kishkindha, Kaṇṭakasthala, the territory of the Aborigines, Purikas, Daçârṇas,³ naked Çabaras and Parṇa-Çabaras.⁴ These are the regions standing under the group Açleshâ, Maghâ, and Pûrva-Phalgunî.

11-16. In the south are Ceilon, the Kâlâjinas, Sauris, Kîrṇas,<sup>5</sup> Tâlikata, Girnar, the Malaya-, Dardura-, Mahendra-, and Mâlindya-hills, Bhroach,<sup>6</sup> Kankata, Tankana, Vanavâsidistrict, the Çibikas, Phaṇikâras, Konkan, the Âbhîras, the Mines (Kandeish), the Veṇâ-river, Avanti, Daçapura, the Gonardas, Kerala, Karnatic, the Great Forest, the Cîtrakûṭa-hills, Nasik, Kollagiri, Cola, Krauncadvîpa, the Jaṭâdharas, the river Kâverî, Mount Rishyamûka, the Mines of berylstone, the places where conch-shells and pearls are found, Atri's hermitage, the Mariners,<sup>7</sup> Yama's city, the Islands,<sup>8</sup> Gaṇarâjya, Kṛshṇa-Vellûra, the Piçikas, Mount Çûrpa, Mount Kusuma, Tumbavana, the Kârmaṇeyakas, the South Sea, the Hermitages, the Rshikas, Konchî, Marucî,<sup>9</sup> Cerya, Âryaka,

<sup>&</sup>lt;sup>1</sup> According to Kathasaritsagara 9, 54, 14 and 56, 54, the Cocoa-island is a great island.

<sup>&</sup>lt;sup>2</sup> This is the preferable reading, as Paraçara exhibits the same form.

<sup>&</sup>lt;sup>3</sup> The Dosarene or Desarene of the Periplus Maris Eryth. Cf. Lassen, Altert. iii. p. 202.

<sup>4</sup> i.e. "leaf-savages," meaning those that feed upon leaves. They are manifestly the Phyllitæ of Ptolemy.

<sup>&</sup>lt;sup>5</sup> The Comm. r. सैर्जीर्ण. and takes it for one word. The Sauris I presume to be the Soræ of Ptolemy.

<sup>6</sup> The Barygaza of the Greeks.

<sup>&</sup>lt;sup>7</sup> These may be the Pirates of Greek sources.

<sup>8</sup> Apparently the Maledives.

<sup>&</sup>lt;sup>9</sup> Marueî, or Muracî, Marîci, seems to be the Muziris (transposed from Murizis) of the Greeks.

the Sinhalas, Rshabhas, Baladeva-pattana, Daṇḍakâ-forest, the Timingilâçanas (i.e., whale-eaters), Bhadras (i.e., blessed), Kach (in the Dekkan), Kunjara-darî (i.e., elephant's cave), and the river Tâmraparņî.

17-19. In a south-western direction (from the midland) are the following tracts: <sup>4</sup> Of the Pahlavas, Kâmbojas, Sindhu-Sauvîras, Vaḍavâmukha, <sup>5</sup> Ârava, the Ambashthas, Kapilas, Nârimukhas (i.e., men with a woman's face), Ânartas, Pheṇagiri, the Yavanas, Mâkaras, Karṇaprâveyas, <sup>6</sup> Pâraçavas, Çûdras, Barbaras, Kirâtas, Khaṇḍas, (i.e., dwarfs?), Raw-flesh-eaters, Âbhîras, Cancûkas, Hemagiri, the Indus, Kâlakas, Raivatakas, Surashtrians, Bâdaras, and Draviḍas. <sup>7</sup> These, as well as the great (Indian) Ocean, stand under the three asterisms, Svâti, Viçâkhâ, and Anurâdhâ.

20, 21. In the west are the Manimat and Meghavat hills,

<sup>1</sup> It is strange here to find Sinhala after the occurrence of Lankû in v. 11.

<sup>&</sup>lt;sup>2</sup> The *Balaipatna* of Ptolemy, so that the r. Palaipatna, preferred by Lassen, is proved to be a false form; see Lassen, Altert. iii. pp. 181 and 183.

<sup>&</sup>lt;sup>3</sup> The Comm. sees two words in the compound, viz. Taimingilas and Sanas or Çanas, whatever this may be.

<sup>&</sup>lt;sup>4</sup> Some of the countries enumerated do not lie in the S.W., e.g. the Kambojas, Yavanas, Ambashthas, and others.

<sup>&</sup>lt;sup>5</sup> In the astronomical Siddhântas Vadavâmukha is the supposed abode of the dead at the South Pole.

<sup>&</sup>lt;sup>6</sup> Synonymous with Karṇaprâveya is Karṇaprâvaraṇa. Now, प्राव्य is synonymous with प्रविणि, so that प्रावय either stands for प्रावेख, or प्रविण and प्रावेख are derived from the same base with प्रावेश. The Mârkaṇḍeya-Purâṇa 58, 31, has Karṇaprâdheya, in which dh is a misread v.

<sup>&</sup>lt;sup>7</sup> Or, as another MS. has, Dramidas. There must be some Dravidian tribe in the West, perhaps the Brahui in Beluchistan, who belong to the Dravidian stock. See Caldwell, Drav. Grammar, p. 11. It is worth while remarking that Parâçara in his enumeration mentions Dramidas, Dravidas in the East too; those seem to be the tribes of the Râjmahal hills. See Caldwell, *l.c.* 

Vanaugha, Mount Kshurârpaṇa, the Mountain of Sunset, the Aparântakas (i.e., people of the western marches), Çântikas, Haihayas, Mount Praçasta, the Vokkânas, the Panjâb, Ramathas, Pâratas, Târakshiti, the Jṛngas, Vaiçyas, Gold-Scythians, and all the lawless hordes of barbarians living in the west.

22, 23. In the north-west are the Mândavyas, Tukhâras, Tâlas, Halas (or Lahas), Madras, Açmakas,² Kulûtas, Lahada (or Laḍaha),³ the kingdom of the Amazons, the Man-lions, the Woods,⁴ the inhabitants of the sky, the rivers Venumatî, Phalgulukâ, and Guruhâ,⁵ the Marukuccas (or Murukuccas), Carmarangas, the One-eyed men, the Sûlikas (or Mûlikas), the Long-necks, Long-faces, and Long-hairs.

24-28. In the north lie the mountains known as Kailâsa, Himâlaya, Vasumat, Dhanushmat, Kraunca and Meru, the Hyperboreans, Kshudramînas, Kaikayas, Vasâtis, those who live near the sources of the Jamnâ, Bhogaprastha, the Ârjunâyanas, Âgnîdhras (or Agnîtyas), Âdarça, Antardvîpa, Trigarta, the Horse-faced, Dog-faced, Long-haired, Flatnoses, Dâserakas, Vâṭadhânas, Çaradhânas, Takshaçilâ, Pushkalâvatî, the Kailâvatas, Kaṇṭhadhânas, Ambaras, Madrakas, Mâlavas, Paurayas, Kacchâras, Daṇḍapingalakas, Mânahalas,

<sup>&</sup>lt;sup>1</sup> The Comm. explains differently, "the region of Gold" and "Scythians."

<sup>&</sup>lt;sup>2</sup> The Assakanoi of the Greeks.

<sup>&</sup>lt;sup>3</sup> This seems to be Lahara, so frequently mentioned in Raja-tarangin, e.g. 7, 912, 1373 (Lahara "Laharian," 1173). It is a borderland betwixt Kashmir and Dardistân; to this identification of Lahara and Lahaḍa, it will not be objected that our author, committing the grave blunder of placing Kashmir and Dardistân in the North-east (v. 29), should needs have assigned a wrong situation to Lahaḍa too.

<sup>4</sup> The Comm. takes नसिंहवनं for one word.

<sup>&</sup>lt;sup>5</sup> Guruhâ (also Garuhâ) is, to my apprehension, the Garoigas of the Greeks; the river district they called Goryaia. Lassen, in his Altert. iii. p. 127 and 136, identifies the Greek name with Gaurâ. It need not be pointed out how exactly both forms coincide with Garuhâ and Guruhâ.

<sup>6</sup> R. with one MS. of the Comm. तर्गानग्यस्खाः

Huns, Kohalas, Çîtakas (or Çâtakas), Mâṇḍavyas, the city of the Spirits,¹ the Gandharians, the town of Yaçovati,² the Hematâlas, Kshatriyas,³ the inhabitants of the sky, Gavyas, Yaudheyas, Dâsameyas, Çyamâkas, and Kshemadhûrtas.

29-31. In the north-east are Meruka, the kingdom of the Dead, the Nomads, Kîras, Kashmirians, Abhisâras, Dards, Tangaṇas, Kulûtas, Sairindhas, the Wood territory, Brahmapura, the Dârwas, Dâmaras, the kingdom of the Woods, the Kirâtas, Chinese, Kaunindas, Bhallas, Palola (the swamps), the Demons with elf-locks, the Kunathas, Khasas, Ghoshas (stations of herdsmen), Kucikas, the One-footed people, the Anuviçvas, Gold region, the groves of Vasus (spirits), the inhabitants of Heaven, Pauravas, the people clad in barks, the beings with three eyes, Mount Munja, and the Gandharvas.

32, 33. In case these groups, the first of which consists of Kṛttikâ, Rohinî, and Açvinî, and so forth, suffer from evil planets; then the following monarchs, in regular order, are to perish; to wit: the kings of Pancâla, Magadha, Kalinga, Avanti, Anarta; farther, he of the Sindhu-Sauvîras, Hârahauras, Madras; and, finally, he of the Kunindas meets his fate.

¹ Paraçara has: स्रभ्तपुर "the city of the gods, of the Spirits," etc.

<sup>&</sup>lt;sup>2</sup> A mythical city of the Elves.

<sup>&</sup>lt;sup>3</sup> The Chatriaioi of Ptolemy.

<sup>4</sup> R. মন্ত্রা: ঘ্রান্ত ; palola must be the vulgar pronunciation for the Skr. palvala, "swamp, marsh." The modern name is Terai, the eastern part of which, near Coosh Behar, seems to be meant by palola in our list.

<sup>&</sup>lt;sup>5</sup> In all likelihood a mythical land; with Ptolemy it is called Chryse (cf. Lassen, Altert. iii. 242), which is not to be confounded with the real island and peninsula Chryse. The latter is held to be Malakka; the Golden Island, however, the existence of which is denied by Lassen (Altert. iii. 247), but sufficiently attested not only by the Greeks, but also in the Kathâsarit-sâgara x. 54, 99; 56, 62; 57, 72; xviii. 123, 110, cannot be but Sumatra, including, perhaps, Java. Cf. Râmâyaṇa, iv. 40, 30 (ed. Bombay).

<sup>6</sup> With Paraçara, खर्णभूमिदैवखबदेवोद्यानानिः

### CHAPTER XV.

Allotment of animate and inanimate objects to the asterisms severally.\(^1\)

1. To Kṛttikâ are assigned: White flowers, keepers of holy fires, reciters of sacred poetry, those who know the sacrificial rules, grammarians, miners, barbers, Brahmans, potters, chaplains, and makers of calendars.<sup>2</sup>

2. To Rohin: Keepers of devotional observances, merchandises, kings, wealthy persons, those that are engaged in religious meditation, waggoners, cows, bulls, aquatic animals, agriculturists, stony heights, and domineering men.

3. To Mṛgaçiras: Fragrant things, garments, aquatic produces, flowers, fruits, jewels, beings roaming the woods, birds, wild deer, Soma-drinkers, musicians, lovers, and letter-bearers.

4. To Ardra: Slayers, catchers, cheats, adulterers, thievish persons, false-hearted men, instigators to discord, husk grain, bravoes, charmers, bewitchers, and ghost-banners.<sup>4</sup>

5. To Punarvasu: Truthful, noble-minded, pure, well-born, handsome, sensible, estimable and rich men, the most prized grain sorts,<sup>5</sup> dealers, attendants, and artisans.

6. To Pushya: Barley, wheat, rice, sugar-cane, woods, royal counsellors, men living by water, honest men, and persons delighting in solemn and occasional sacrifices.

<sup>1</sup> The astrological use of such a division is taught below, v. 31.

<sup>2</sup> The principle upon which the allotment rests is perspicuous; most of the classes of persons enumerated are in constant connection with fire, the lord of Kṛttikâ; the barbers pertain to the asterism on account of kṛttikâ signifying "a razor." The makers of calendars do so because Kṛttikâ once was the first Nakshatra of the year.

3 One MS. of the Comm. r. पुल, explaining it by पुरावृत्तय: "men of holy deeds."

<sup>4</sup> All evildoers are assigned to Ardra, because this asterism is presided over by Civa, their patron.

<sup>5</sup> According to Utpala, कलमशास्त्राहिः

6 Chiefly fishers, धीवरप्रायाः

7. To Açleshâ: Counterfeits, bulbs, roots, fruits, insects, snakes, poison, robbers, husk grain, and all classes of leeches.

8. To Maghâ: The possessors of wealth and corn, granaries, mountaineers, men pious towards ancestors, traders, heroes, carnivorous animals, and woman haters.

9. To Pûrva-Phalgunî: Mimics, damsels, amiable persons, musicians, artisans, merchandises, cotton, salt, honey, oil,

and boys.

10. To Uttara-Phalgunî: Mild, pure, modest, heretical, charitable, and studious persons, fine sorts of corn, men of great wealth, of virtue, and monarchs.

11. To Hasta: Robbers, elephants, charioteers, elephant-drivers, artisans, merchandises, husk grain, scholars, mer-

chants, and energetic men.

12. To Citrâ: Persons skilled in the art of attire, jewelry, dyeing, painting, music, and perfumery, as well as arithmeticians, weavers, oculists, and king's corn.<sup>2</sup>

13. To Svâti: Birds, wild deer, horses, traders, corn, such produces of the field as cause flatulency,<sup>3</sup> men fickle in friendship, feeble characters, ascetics, and connoisseurs of wares.

14. To Viçâkhâ: Trees with red blossoms and fruits, sesamum, beans, cotton, peas, lentils, and men devotedly

attached to Indra and Agni.

15. To Anuradha: Gallant men, deacons of corporations, persons delighting in the fellowship of the good,<sup>4</sup> travellers, honest people generally, and all that grows in autumn.

16. To Jyeshtha: Heroical men, persons of good family, wealth and fame, thieves, ambitious kings, and commanders

of armies.

17. To Mûla: Medicaments, physicians, foremen of corporations, persons dealing in flowers, roots and fruits, various seeds, very rich men, and individuals feeding on fruits and roots.

<sup>1</sup> R. पाषाड, i.e. "heresy."

<sup>&</sup>lt;sup>2</sup> Explained as षष्टिकादि.

<sup>8</sup> Viz., lentils, etc. चण्कप्रभृतीनि.

<sup>&#</sup>x27;The Comm. differently, साधूनां चे रताः। गोष्ठिरता नर्भासकाः

- 18. To Pûrva-Ashâdhâ: Soft-minded men, people frequenting water-roads, truthful, pure and wealthy men, makers of bridges (and dikes), persons living by water, aquatic fruits and flowers.<sup>1</sup>
- 19. To Uttara-Ashâdhâ: Mahouts, boxers, elephants, horses, pious men, immovables, soldiers, persons living in comfort, and energetic men.

20. To Cravana: Jugglers, constantly active, able, enterprising and righteous men, Vishnuites, and speakers of truth.

21. To Dhanishtha: Contemptible and unmanly individuals, fickle friends, men obnoxious to their wives,<sup>2</sup> charitable, rich and quiet persons.

22. To Çatabhishaj: Snarers, fish-catchers, aquatic produces and dealers in fish; to this division belong also boarhunters, bleachers, distillers, and fowlers.

23. To Pûrva-Bhadrapadâ: Robbers, herdsmen, mischievous persons, niggards, low and false-hearted people, those who are devoid of virtue and devotion, and boxers.

24. To Uttara-Bhadrapadâ: Priests, persons in the habit of sacrificing, giving alms, and leading an austere life, men of magnificence, ascetics, heretics, sovereigns, and grain of best quality.

25. To Revatî: Aquatic fruits and flowers, salt, jewels, conch-shells, pearls, and other produces from water, fragrant blossoms, perfumes, traders, and helm's-men.

26. To Açvinî: Horse-dealers,<sup>3</sup> commanders of armies, leeches, attendants, horses, horsemen, merchants, handsome persons, and horse-grooms.

27. To Bharanî: Those that feed on blood and flesh, cruel men, slayers, catchers, cudgellers, husk grain, low-born persons, and men wanting in character.

<sup>1</sup> Thus it is understood by Utpala, and notwithstanding the irregularity of the construction, it must be the purport of the statement.

² R. of course in the text, द्वेथा:.

<sup>3</sup> Utpala, अध्याह्का:; the term in the text sounds opprobrious, but in all countries a horse-dealer and a horse-thief are held to be interchangeable terms.

28. The three asterisms, whose name begins with Pûrva, as well as Kṛttikâ, are the Brahmans' own; the three Uttarâs and Pushya, are the princes'; Rohiņî, Revatî, Anurâdhâ, and Maghâ, are the husbandmen's.

29. Punarvasu, Hasta, Abhijit, and Açvinî, are declared to be the asterisms of merchants; Mûla, Ârdrâ, Svâti, and Çatabhishaj, exercise dominion over the cruel classes of society.

30. Mṛgaçiras, Jyeshṭhâ, Citrâ, and Dhanishṭhâ have power over servants. The outcasts are assigned to Açleshâ, Viçâkhâ, Çravaṇa, and Bharaṇî.

31, 32. A lunar mansion is said to be hurt, when occupied by the Sun or Saturn, when damaged by Mars cutting through or retrograding in it, when suffering from an eclipse,<sup>2</sup> when hit by a meteor, when manifestly crushed by the moon,<sup>3</sup> or, in short, when something extraordinary happens with it. All this is noxious to the fore-mentioned dependency of the particular asterism, whereas the contrary augurs prosperity.

1 i.e. Çûdras. Utpala, विशाजनानां मुद्राणां।

<sup>2</sup> That is to say, when sun or moon standing in it is eclipsed: यज्ञचास्थितो = कीसन्ही वा राज्ञणा ग्रस्ति।

³ i.e. when the moon goes through the middle of the junction star, or takes her course to the southern part: यस नच्चस चन्द्रमा योगता-रकाभेदनमाच्छादनं मध्यगमनं दचिषासागगमनं वा करोति।

(To be continued.)

ART. IV.—The Pongol Festival in Southern India.

By Charles E. Gover.

Read November 29, 1869.

Long before I had set foot in India I had been greatly struck by the exceedingly different statements regarding its people which were made by those who knew them best. Some, and notably the missionaries, could find no language strong enough to express the utter abomination of Hindu life and custom. Every chapter of Ward's great work teems with phrases of the strongest reprobation. The ceremonies he describes are indeed vile, and it cannot be said that his condemnation is too strong. On the other hand, civil and military officers, of the highest integrity and the closest observation, have set up the Hindus as models which it would be greatly to the benefit of Europeans to follow. They saw in the Hindu village system, and the ordinary life of the villagers, a living type of patriarchal happiness, uprightness, and wisdom. Major Scott Waring may be taken as a type of such men. The discussions in Parliament upon the clauses of the great India Bill that permitted the appointment of Bishops, and opened India to mission work, are full of illustrations of this contradiction; and I can well remember when, as a boy, I waded through the reports, being struck with wonder that men who had lived side by side in India, who had gained enormous experience and possessed the ability to learn the lessons that experience should teach, could, by any possibility, arrive at conclusions so diverse. After many years spent in close intercourse with the people of India, I do not wonder now. On one occasion both views of the question were brought vividly before me. I had seen the Pongol, the touching domestic festival it is now my chief object to describe. It had proved by its simple pathos that the Hindus were akin to the noblest nations of the world, and that in their

antiquity they were worthy of the honour that has come to them, of being the best and the least altered representatives of the *Juventus Mundi*, which all nations count to have been the Golden Age.

From this, by the rapid transition afforded by the modern railway, I went straight into the great temple of Seringham, near Trichinopoly. What a new world was this! idol car, bright with gilt and gaudy colours, was loaded with carvings of the obscenest possible character. Vice was rampant there. It rioted in the phallus. As I passed the gigantic monolithic gates, which admitted the devout from enclosure to enclosure, it was impossible to escape the brilliant frescoes which adorned (?) the roof, far up, the nearest thing to heaven, in all that temple! How can I describe, or even hint at, what was there? In the most sacred shrine of Southern India, which contests the palm of sanctity with holy Benares-carved and painted in every ring, increasing in abomination as the shrine was approached -above the heads, on every side, yes, and under the feet of the thousands of men, women, and children who throng the place—the application and essence of every Pauranic story told by the priests-were these paintings, larger than life, with every detail of obscenity magnified out of all proportion. It required no very close observation to learn that these were but outward signs of what was daily performed and honoured within the holy precincts. Here was ample justification for every epithet employed by Ward, Dubois, or Wilberforce. Yet the Pongol declared, with equal force, in favour of domestic love and chastity, of simple thanksgiving and rural contentment. Both are right. Both are wrong. The key of the anomaly lies in this fact—that Brahmanism is not Hinduism-that the theocracy of the sacred caste has not permeated and indurated the other castes, that is, the mass of the people—that the religious and social aspects of society are vastly different. The Brahmans are so much more intelligent, learned, supple, and pleasant to deal with than the common people, that almost all writers have confined themselves to Brahmanical life, and (though not often saying so)

have led most people to imagine that India is what the Brahmans are. It has thus come to pass that those who have not deliberately set themselves to try to understand the people, that is the nineteen out of every twenty of the population, have taken all their ideas from a class. The recent spread of Sanskrit knowledge has tended to the same end, for none but Brahmans know Sanskrit, and the whole of its more recent literature is Brahmanic, written to forward the purposes of the sacred caste. The civil and military servants of Government have always been so overworked that they have had no time to write, except on official subjects. While they lived, they, almost to a man, were stout defenders and apologists of the Hindus, but their evidence was but verbal; writ in water, it perished with them. There has, therefore, been no counterpoise to the pressure of Brahmanic influence. The result has been that there is, at the present time, next to nothing known of the common people, the Vaisyas and Sûdras of the Hindu economy. This is the more to be regretted, because it not unfrequently happens that the lowest strata of society contain fossilized remnants of Aryanism as it was first introduced The present Brahmanic system is the result of into India. centuries of steady growth. The stages of this growth may be traced. As Brahmanism arose, Aryanism decreased. The Vedas were superseded by the Purânas, and Vedic ceremonies have given way to the monstrous pile of devotion built upon the deeds of Vishņu and Siva, Râma, Krishņa, and Kâlî. The result of this has been that there may often be found, among the masses, types of primitive custom, which have long ago passed from the literature and practice of the priest caste. There is much reason to suppose that the Pongol is one of the most complete and interesting of these remnants of primitive life. That it is primitive is shown by the fact that the old Vedic deities are alone worshipped. Indra is the presiding deity; Agni is the main object of worship. A further proof of this point is given by the efforts that have constantly been made by the Brahmans to corrupt the ritual, and introduce Pauranic deities. Krishna is always declared by the Brahmans to be the Pongol god, but the tradition itself bears

witness that the feast is older than the god. The tale is, that when the great wave of Krishna worship passed over the Peninsula, the people were so enamoured of him that they. ceased to perform the Pongol rites to Indra. This made the latter deity so angry that he poured down a flood upon the earth. The affrighted people ran to Krishna, who seized the great mountain Govardhana, wrenched it from its place, and held it aloft on the tip of his little finger, like some huge umbrella. The people then ran beneath with their flocks and were saved, until Indra saw that his wrath was vain. Thus runs the story, and the conclusion is, that a grateful people dethroned Indra from his presidency of the Pongol and placed Krishna in his stead. Though the whole influence of the Brahmans has been brought to bear upon the point, the rustic conservatism of the cultivators has been able to withstand it, and everywhere Indra is the King of the Pongol. In very Brahmanic districts a compromise has been effected, by which Krishna and Indra share the honours of the feast.

The occasion of the festival is also primitive, for the Pongol is another feast of ingathering, the centre of Hebrew festivals, as this is of those of Southern India. Just as, when the Hebrews passed from their bondage into the land flowing with milk and honey, their joy at the change showed itself in the "ingathering," so did the Aryan wanderers from the plains of Central Asia, and their hard fare and scanty crops, hail with joy the fruitful plains of India. It was indeed to them the blessed land. As they found that "when they tickled the ground with a plough, the fields laughed with golden crops," they could not but celebrate the beneficent return of the seasons, and adore the elemental gods that blessed This of itself, however, will not prove the festival to be Aryan, although, combined with the proofs already and to be given, it will help to deepen our conviction of the recognition. But there can be no doubt that the Indian immigrants were previously a pastoral tribe, rich in horses, cattle, and sheep, and proud of the four-footed friends that carried them to the hunt or the battle, fed their families with milk and

butter, and were their indefatigable servants in the field. Hence they would bring with them an almost Arab love of animals. When they rejoiced over their ingathering they would not forget the dumb friends of their pastoral homes. However that may be, the Pongol is remarkable, as will be seen when the description is given, for the strange combination of pastoral, hunting, and agricultural life. There are "Harvest Homes" in almost every nation that owns fruitful fields, but I do not know of any other example of the combination. The great days of the feast are two—one of these is devoted to the new crops, the other to the cattle alone. As will be seen, the cattle are treated with every imaginable honour, while the feast winds up with a grand hunt, first, of the cattle themselves, and next of a hare.

The exceeding simplicity of the ritual is another point to which I would ask attention. All who have studied the subject know that Brahmanism is remarkable above all things for its wondrous complexity.

So marked is this that after every important ceremonial the officiating priest has to offer a last oblation, and repeat a parting mantra to cleanse the guilt that must accrue from any forgetfulness on his part. The rosary is as much used by them as by Roman nuns, and for the same purpose.

Long before the commencement of the feast, an unwonted activity pervades native society. The Pongol is the social festival of the year, and must be celebrated with due honour, else an ineffaceable stain will rest on the family name. It is the Christmas and Whitsuntide of England made into one, and must be treated accordingly. So as soon as the rains have finished, and this may be expected by about the first week in December, the carpenter, the builder, and the artist, are in full work repairing the houses. The inner walls of the verandah are adorned with the brilliant water colour drawings which take the place of the frescoes of Pompeii. The village soucar's house must be especially grand, else folks would doubt his ability to lend his usual advances upon the next crop. A very favourite representation is that of an English soldier prostrate beneath the feet of an infuriate tiger,

who glares at the sepoy who is bravely trying to rescue his pale comrade. Incidents in the life of Krishna are very frequently given, while Ganesa the bellygod squats on his rat over the door.

When the house is ready, the housewife takes up the work. She has to buy new vessels of every kind, for it would be dreadful if the new rice were to be boiled in an old vessel. So the sides of the road in the bazaar are heaped with "chatties" of all sizes and shapes. Meanwhile the father of the family goes to buy new clothes for the children. The little girl, just beginning to walk, must receive her first bangle or necklace; the eldest boy must have a gold mohur to hang from his ear, or serve for a button on his vest. master himself wants a new turban or cummerbund. All these must be bought at Pongol. Nor is this all. The family is an undivided one, and some of its younger members are serving as writers in the Hoozoor Cutcherry twenty miles away, striving to eke out small salaries. A present must go to each of them. They have no fields of their own from which to get their rice, so a sack of the new grain from the ancestral acres goes off to each. To this is added a pot of ghee, a set of brass pots, or perhaps a jewel; that the Pongol may not lack wherewith to make it joyful. This universal kindness is most pleasant to see, and of course still more gratifying to give and take. Nor does the gentle and kindly influence of the time cease here. The files of the Munsifs' court will have been crammed with cases from litigious enemies or greedy money lenders. But as Pongol comes round many of them disappear. The creditor thinks of his debtor, the debtor of the creditor. The one relents, the other is ashamed, and both parties are saved by a compromise. Often it happens that a process is postponed "till after Pongol."

All must be ready by the early part of January, when, according to the Hindu astrologers, the sun enters the tropic of Capricorn. The feast hangs upon this, and it will be seen that the most interesting event of the celebration must exactly coincide with the passage of the sun. The festival com-

mences on the previous day, and lasts for seven days; of which the second marks the sun's passage, and is called Mahâ (or Great) Pongol. For some days previously, however, the boys have been busy gathering sticks, straw, bratties (cakes of cowdung), dead leaves, and everything else that will burn. These have been carefully hidden and guarded, lest those whose heap of "plunder" was small, might peach upon their neighbours' preserves. Even the old folks are not supposed to know anything, so that their first view of the pile may have all the charm of novelty. We will suppose then that all is ready on the eve of the feast. Next day is Bhôgi Pongol or Pongol of Rejoicing, but it is equally well known by the name of Indra, to whom the day is dedicated. Long before sunrise all are awake, the boys first of course, for they are the heroes of the hour. Routing out their elders from their places of repose, they lead them with shouting and leaping to the pile they have collected. When all are gathered shivering in the cold morning air, the leading youngster applies the torch, and in a moment a vivid flame leaps up into the sky. At the same time every street and lane has its bonfire, and far away to the horizon the gleam of the fires reddens the murky gloom. The young folks leap over the fire as it sinks, or heap on fresh fuel. The old folks stand around and tell of the glorious fires they made in "the good old times," when men were different from what they are now. This fire is the oblation to Sûrya, the Sun-god, or rather to Agni, and wakes him from his sleep, calling on him to again exert his power and gladden the earth with his light and heat. It is not easy to discover the origin of this curious feature of the day's proceedings, but there are very many passages in the Rig Veda which prove that something similar preceded every great festival. Compare, for instance, Rig Veda, i. 44, 9 (Wilson's translation, vol. i. p. 120), "Thou, Agni, art the protector of the sacrifices of the people, and the messenger (of the gods); bring hither to-day the gods awaking at dawn." Again, Rig Veda, i. 45, 7 (Wilson, i. p. 122), "The wise have placed thee, Agni, in (their) sacrifices as the invoker." Again, Rig Veda, i. 36, 2 (Wilson, i.

p. 100), we find—"Men have recourse to Agni, the augmenter of vigour; offering oblations, we worship thee; do thou, liberal giver of food, be well disposed to us here this day, and be our protector." In fact, there are many passages that would seem to show that Agni held among the Vedic races the position now filled by Ganesa, the god of good luck, the averter of obstacles, the messenger to and from the gods, who must be propitiated before any attempt is made to adore another god, else the prayer of the devotee would be spoiled in the carriage to the localities where the gods dwell, and be rendered a source of ill rather than of good. There are other passages which will be quoted further on, which prove that the crops, the cattle, and generally the provision of food, was under the control of Agni, and thus his worship at the ingathering assumed and maintained unwonted importance. There is, however, one Sûkta, in the first Mandala of the Rig Veda, which seems clearly to point to some such universal bonfire as that which now marks the advent of Pongol. It is Rig Veda, i. 140 (Wilson, vol. ii. p. 63 ff), the second verse of which runs thus-"Agni the two-fold generated, devours the triple (sacrificial food), and when the year expires renovates what has been eaten." There is here a plain reference to the period of the year represented by the ingathering "when the year expires." The "renovation of what has been eaten" is the harvest. Verses 4 and 5 point clearly to some vast celebration. "The (flames of Agni) light-moving, dark-tracked, quick, capricious, restless, lambent, fanned by the wind, wide-spreading and ensuring liberation (to the devout), are kindled for (the benefit of) the pious reverencer of (holy) priests. Thereupon those (flames of Agni) extend together in all directions, dispersing gloom, and spreading great light along the path of darkness; when (Agni) illumes repeatedly the whole earth, and proceeds panting, thundering, and roaring aloud." The following verses beautifully describe the rushing of the fire, and its effect upon the earth. The last verse again draws us to the occasion and object we have in hand-"Agni, be propitiated by this our earnest praise, and may heaven and earth and the spontaneously

flowing (streams) provide for us the produce of the field; and may the purple coursers (of the dawn) bestow upon us abundant food through a length of days." There are other passages, which need not be quoted, which show that it was common to light fires to Agni before the dawn, during the darkness of the night (Wilson, vol. i. pp. 119, 161).1 There is more difficulty in discovering why on this particular day the fires should be lighted by the boys. But perhaps even this point may be elucidated. I would only refer to the fact that Agni is frequently called the youngest of the gods, he is invoked as "Juvenile Agni," as knowing "all that are born." The very season may have something to do with it. Harvest is the "renovating" period, the time of reproduction, the provision for children; and, as in many other countries, it was natural that the rejoicings of the ingathering should be initiated by the boys, who, alone in a Hindu household, may without shame exhibit tokens of exuberant joy. There are no dancing maidens; no light-heeled men. Manhood with the Hindu is a time of gravity and self-respect, and women may never join in a public celebration. Others more learned than myself may be able to follow up this part of my subject.

The feast is now begun, and all turn from the fire as it is extinguished by the rising sun, to the bath with which every

extinguished by the rising sun, to the bath with which every

1 In Max Müller's elaborate paper on the sixth hymn of the first book of the Rig Veda in the Journal R.A.S. for 1867, page 225, occurs the following translation:—"Thou, O Agni Jâtavedas, hast carried, when implored, the offerings which thou hast rendered sweet. Thou hast given them to the fathers, they fed on their share. Bat thou, O god, the proffered oblations. Our fathers who are here, and those who are not here, our fathers whom we know, and those whom we do not know, thou knowest how many they are, O Jâtavedas, accept the well-made sacrificial portions. They who, whether burnt by fire or not burnt by fire, rejoice in their offering in the midst of heaven, give to them, O king, that life, and thy (their) own body, according to thy will." The first two sentences clearly point to Agni as the messenger to and from the gods, and therefore to be invoked at the commencement of the sacrifice. The next phrase—"Eat thou, O God, the proffered oblations," is still the ordinary form in which the offering is made. Can the next very remarkable phrase refer to a family gathering, when "our fathers who are here, and those who are not here," that is, the present heads of the family and those who are dead, are called to the festival, so that it may represent to the gods the generations who have been blessed? The last sentence, "whether burnt by the fire, or not burnt by the fire," is equally striking. Can this refer to such a bonfire as I have described, and to the leaping over it, which is the constant accompaniment of the ceremonial? "Rejoicing in their offering in the midst of heaven—whether burnt or not," is a very curious phrase, and would seem, on the face of it, to point to some popular ceremony, in which fire was an essential point.

religious rite must commence. When this is over the ordinary morning prayers and mantras are repeated, and a special prayer is offered to Pülliârswâmî or Ganesa, that he will be pleased to remove all obstacles from the way of the successful accomplishment of the ceremony. It is necessary to say here that no image is used during the whole course of the celebration except that of Ganesa, and this is simply adored because nothing whatever can be expected to go right if he be not propitious. Indra is represented on ordinary occasions as a white man sitting on an elephant. In his left hand is a bow, and in his right a thunderbolt, while his body is studded with a thousand eyes. Agni has also his special image, that of a stout man, red and hairy as Esau, riding on a goat. Sûrya is also a red man sitting on a water-lily. He has four arms and three eyes. But none of these are known at Pongol any more than they were at the time when the hymns of the Rig Veda were composed. In fact, we see them here only in the form of the elements. Indra is the rain which fell to cause the rice to spring. Sûrya or Agni, for the two are united, is the sun which ripened the grain. Does not this also point to a time anterior to the modern Hindu pantheon, which first turned the elemental gods into idols, and then very nearly forgot them altogether?

For some days previously the wife and her assistants have been busy preparing all kinds of sweetmeats, and while the males are at prayers, bathing, and tooth cleaning, the accumulated store of sweets is parcelled out for presents to neighbours, patrons, and colleagues. Every European with whom the Hindu has had the slightest connexion, or from whom there is a possibility of the slightest favour, must be carefully remembered. The gifts are laid out on trays. In the midst is a huge vase of sugar; or, perhaps, the vase gives way to an idol, peacock, or elephant, round which will be grouped smaller works in sugar for the children; then plantains, oranges, and every other fruit in season. One thing may not be forgotten, that is a lime. This must be as large as money can buy, and then be carefully encased in gold leaf, till it looks like one of the golden apples of antiquity. The whole

are bound, adorned, and crowned by thick wreaths or rather chains, for many of them are a yard and a half long, of chrysanthemums thickly strung on a cord. Oleanders and other flowers are intertwined, but the golden chrysanthemum is the main and essential thing. When all is ready the servants are dressed in their best, and are sent with the travs to the houses of those who are invited to join the family party in the evening, for the Pongol is the great visiting time of the year, and the first day must be wound up by a family party. If the present is for a European or superior, the head of the house, or his grown-up sons, must go with the present. As soon as the present is brought in to the patron, the heaviest of the chains, and it is as long and heavy as the Lord Mayor's badge of office, is taken from the tray and thrown over the neck of the person to be honoured, and smaller chains are given to the children. A few fulsome compliments pass, and then leave to retire is given, and the ceremony is over.

Thus the day passes. With evening commences the party (a nautch very probably if the entertainer be rich). It is not within my purpose to describe details of etiquette and ordinary social life, and I therefore pass on, only stating that each evening of the feast there is an entertainment given, first by one and then another, of each group of friends.

Next day is Mahâ (or Great) Pongol. It is also often called Sûrya Pongol. At noon the sun will cross the equator, and bring the culminating glory of the feast. So great a day must commence with appropriate ceremonial, and in this instance it is bathing.

In country places the women run early in the morning to the nearest sacred tank and plunge bodily in without undressing. Usually the women are very particular not to wet their clothes, and an innovation so uncomfortable, and possibly dangerous, could not have been borne without good cause. The men also bathe very carefully, as if the occasion were very solemn. We have the reason in Rig Veda, i. 23, 15–24 (Wilson, vol. i. pp. 57, 58), "Verily he (Agni) has brought to me successively the six (seasons) connected with the drops (of

the Soma juice) as (a husbandman) repeatedly ploughs (the earth) for barley. Mothers to us, who are desirous of sacrificing, the kindred (waters) flow by the paths (of sacrifice), qualifying the milk (of kine) with sweetness. waters which are contiguous to the Sun, and those with which the Sun is associated, be propitious to our rite! I invoke the divine waters in which our cattle drink; offer oblations to the flowing (streams). Ambrosia is in the waters, in the waters are medicinal herbs; therefore, divine (priests), be prompt in their praise. . . . . Waters, take away whatever sin has been (found) in me, whether I have (knowingly) done wrong, or have pronounced imprecations (against holy men), or (have spoken) untruth. I have this day entered into the waters: we have mingled with thy essence: Agni, abiding in the waters, approach and fill me, thus (bathed), with vigour. Agni, confer on me vigour, progeny, and life, so that the gods may know the (sacrifice) of this my (employer), and Indra with the Rishis may know it." If this passage refer to the custom described above, and the resemblance is so strong that the coincidence can hardly be accidental, we learn that the bathing is at once a part of the worship of Agni and a means of that inward cleansing without which gods. like those of Vedic times, could not be propitiated. The worshipper must himself be pure. The passage also explains why the women have a portion in the Pongol ceremonial. We shall find shortly that the remaining work of woman in the tasks of the day is just that described in the verse beginning "Mothers to us."

Dripping wet, the women proceed, without changing their clothes, to prepare the feast. It must be remembered that we are speaking of the very coldest time of the year, when wet clothes are a most serious inconvenience. It has been said that new chatties, or earthen vessels, had been purchased for the occasion. One of these is now taken and is filled with rice, milk, sugar, dhol, ghee or clarified butter, gram, and other substances, calculated to produce a tasty dish. This is the work of the "mother to us," and her object is "to qualify the milk (and rice) with sweetness." The Pongol

dish of rice is as important a test of housewifely skill in the Madras Presidency as the Christmas plum-pudding in English homes. New rice must alone be used-in fact care should be taken that every constituent of the mess is the produce of the season just closed—the ingathering must be celebrated with things that have just been garnered. (Usually Hindus will not eat new rice, as it is indigestible, bearing the same resemblance to rice that has been kept twelve months as a waxy new potato bears to its well kept-senior.)1 Meanwhile, as soon as the morning meal is finished, the men set up a fireplace in the yard of the house. This is no difficult matter, as nothing is required beyond a few bricks or stones and a little mud. Fancy a dozen horse-shoes, a foot across, placed one upon another and the top one bearing three or four knobs. so that the circular bottom of the pot shall not absolutely close the upper opening. Imagine this pile made of clay, strengthened and bounded by a few brickbats, and we shall have a pretty good idea of an Indian fireplace, such as is emploved for all purposes of cooking, even in the kitchens of the best European houses. Such, at all events, is the contrivance used at Pongol. It is erected in the centre of the court, and open to the sun and sky. Here also we obtain a token of primitive origin, for usually, indeed we may almost say invariably, the Pauranic ceremonies are done within doors. In most respectable houses there is a small room set apart for such things. In it is the household god before which the master of the house performs his worship. In this room the family priest performs his rites, and instructs the growing lads in their religious duties. But then these household gods are Pauranic, while Indra, Agni, and Sûrya are Vedic. The latter worship, and apparently all the more important portions of

¹ Not only is it necessary to eat the new rice now, but the recent crop may not be tasted till now, however poor or stinted the owner may be. The first fruits must go to God, and the bulk of the crop may not be used till the claims of the deity have been duly satisfied. In this point the feast shows the closest likeness to the Jewish celebration—Leviticus, chapter xxiii., verses 10–14, "When ye be come into the land which I give unto you, and shall reap the harvest thereof, then ye shall bring a sheaf of the first fruits of your harvest unto the priest. . . And ye shall eat neither bread, nor parched corn, nor green ears, until the self-same day that ye have brought an offering unto your God."

the worship of Agni, were chiefly in the open air. The sun, rain, and wind have ripened the crops and caused the rejoicing of the Harvest Home, and surely the thanksgiving should be in the face of sun, rain, and wind, so that Indra and his fellows may see and help the ceremony, accepting the praise it is meant to show. (The circumstances of the case have been powerful in aiding the conservatism which leads the Hindu to oppose every innovation, and hence the scene of the ceremony has continued unaltered in spite of centuries of opposition.)

When the fireplace is finished, attention must again be given to Pülliârswâmî. The approaching operation is the most important of the feast, indeed we may say of the year, while the month in which the feast falls is the most unlucky of all. Every day produces evil unless sufficient precaution is taken and suitable oblations offered to the gods. If this be so it behoves all good Hindus to be particularly careful now. So the women, who have to perform most of the ceremonies belonging to Ganesa, because no one has yet been found willing to marry a deity so hideous in outward shape, prepare a great ball of cowdung, which is supposed to represent faithfully a being whose elephant's head and huge stomach render him beyond the power of being improved or made presentable. This ball is then set upon a stone in the yard opposite to the fireplace. The surrounding area is carefully swept and watered. Then the orange-coloured flowers of the citron are taken in considerable quantity and the largest is stuck into the top of the ball. A woman now brings a small pot of rice flour, takes a pinch between her thumb and forefinger, and then proceeds to drop the flour on the ground in a regular geometric pattern. The flour is not sprinkled, but laid on the ground in a true, fine, continuous line. Wonderful skill is often exhibited in the drawing, if such it may be called when nothing touches the ground but the dropping powder, and the patterns are very complex. Yet there is in almost every house one or more women who will run through the whole figure without hesitation or mistake. A store of cowdung is nigh, and the remainder of the citron

flowers. Of the former she makes a number of small balls about twice the size of a marble. In each ball she sticks a citron flower, and then deposits one at every point in the drawing where the lines intersect. Lastly some oil is poured over the larger lump that represents the god, and then all is complete. I should say here that every day during the month a similar drawing, adorned with its tiny balls crowned with the golden citron, is made on the ground in front of the house door. This is done so that Siva, the destroyer, to whom the month is dedicated, may not be able to enter the house without having been appeased by the propitiated Ganesa. Each day a fresh drawing is made, and new balls adorn it; but those used on former days are not forgotten. They are collected carefully each day, and preserved until the last day of the month, when they are all placed in a basket and carried by the women of the house to the nearest tank, into which they are thrown, carrying with them the ill-luck of the month, and permitting the incoming month to be free from fear or sorrow.

When all is complete, the head of the house approaches the image and performs  $p\hat{u}j\hat{a}$  in this way:—Standing in front of the idol, just beyond the drawing, he folds his arms across his breast, laying the right hand on the left shoulder and the left hand upon the right shoulder. He then bows his head and seizes each ear by the hand that rests upon the shoulder nearest it, saying the while a mantra, which consists almost entirely of the words "Oh Vighnêswara, Oh Gaṇapati, Oh Pillaiyâr, help us this day. Avert all obstacles and help us." This he repeats three times as he bows lower and lower, till he is in danger of falling. Thus propitiated, there need be no further fear from Gaṇeṣa.

Yet a third work has occupied the morning, for all are busy. This is purely a work of mercy. Those who know aught of India are aware that the lot of a young married woman is by no means enviable. She knows nothing of her husband, and dare not speak to him save at night. She is delivered over, body and soul, to the mercies of her mother-in-law; and the tender mercies of Hindu mothers-in-law are

cruel. The young wife, she is but a girl, must bear revilings and even beatings at the hand of her tyrant, and has no appeal. She must hew wood, pound rice, and fetch water. She must always be at the beck and call of her husband's mother and may never complain. A gentle girl under a shrewish mother-in-law endures martyrdom every day of her life. Not a week passes in any considerable town, but some young wife drowns herself in well or tank to rid herself of her tormentor. There is no redress even then, for when the coroner holds his inquest, there are always a score of old women to swear that she had complained of "belly-pain," and had threatened to destroy herself in consequence. No coroner's jury can ease or redress the "heart-pain" that led to suicide. All this is well known, and when the joy of Pongol comes, mothers' hearts turn to their despised daughters, and try to devise some means of pleasing the shetyrant. So a present, the best the house can provide, is carefully put together on a tray. It may be fruit, or brass pots, or ghee, or whatever else may be thought most acceptable. Then a small procession is formed. In front go three or four men beating tom-toms and blowing pipes. Then follows the gift held aloft. Over it, if the family be respectable, is held an umbrella, carried by a servant who walks behind the bearer of the gift. Next comes a tiny crowd of friends-brothers, uncles, etc.-numerous in proportion to the position or ferocity of the dame who is to be propitiated. Arrived at the house, the present is offered and accepted. Then the nearest relation present steps forward and asks that the daughter and her husband may come to the "boiling," to fill up the family circle.

All this is done betimes, and then all gather in the court. The time of the passage is near, when the pot is placed in position. Beneath it is a store of wood. Around it are heaped as many bratties (cakes of dried cow-dung used as fuel) as will stand. At the proper moment fire is applied, and a curl of smoke tells that the "boiling" has commenced, and that the sun has made the passage. From this portion of the ceremony, the festival is known in Mysore as the

"Sankrânti," from the Sanskrit word for a "passage." Now every eye is fixed upon the pot. Crowded round it is the whole of the household, from the hoary grandsire to the child just able to walk. Even the infants are there in their mothers' arms, for women have as much place in the Pongol as the men. In front and nearest the pot ought to be the elders of the house, but the habitual reverence paid to age is for the nonce forgotten, and the boys have pushed through. and form the front rank. The house-mother trims the fire and maintains a glorious blaze. As the milk boils, so will the coming year be. Should the process be rapid, prosperity and peace will fill the house till Pongol comes again. Should the fire burn slowly, and the milk lie sullenly in the vessel. clouds of sorrow, shafts of destruction from the great Indra. lord of the lightning and rain, will overwhelm the family. As the fire burns down, for the pot is large, a little ghee will be thrown on the fire, at once an offering to Agni and the means of more rapid boiling.

In the presence and activity of the women, we again see tokens of primitive origin. There is no doubt that in the Vedic period, the women had a special share in the worship of Agni. Compare, for instance, Rig Veda, i. 14, 7 (Wilson, vol. i. p. 35), "Agni, make those objects of veneration, augmenters of pious acts (participant of the offering), together with their wives. Give them, bright-tongued, to drink of the Soma juice."

Again, Rig Veda, i. 72, 5 (Wilson, vol. i. p. 191), we read, "The gods discovering thee (Agni) sat down, and with their wives paid reverential adoration to thee upon their knees." The same Sûkta also contains an allusion, in verse 8, to the fact that Agni was esteemed as the deity who had given milk to mankind—"For thee (Agni) Saramá discovered the abundant milk of the kine with which man, the progeny of Manu, still is nourished."

As the fire burns up, and it is clear that before long the milk will boil, the men-folk standing round mutter mantras or prayers, almost in the very words—they cannot give them exactly, as the Vedas are a sealed book to all but Brahmans—

which so touchingly close the last two and other Sûktas of the second Ashtaka. "Grant, Agni, to the offerer of the oblation, the earth, the bestower of cattle, the means of many (pious rites), such that it may be perpetual: may there be to us sons and grandsons born in our race, and may thy goodwill be ever upon us." Now every neck is bent, for the surface of the milk is disturbed. One bubble, and then another, rises to the top. Dead silence prevails—a terror of waiting thrills the assembly. Then, with a heave, a hiss, and a surge of bubbles, the seething milk mounts to the top of the vessel. Before it has had time to run down the blackened sides, the air resounds with the sudden joyous cry of "Pongol, Oh Pongol, Sûrya, Sûrya, Oh Pongol!" The word Pongol means "boiling," from the Tamil word Pongu, to boil; so that the joyous shout is, "It boils, Oh Sûrya, it boils, it boils!" In a moment a convulsion of greetings animates the assembly. Every one seizes his neighbour and asks, "Has it boiled?" Both faces gleam with delight as the answer comes—"It has boiled." Then both shout at the top of their voices—"Oh Pongol, Pongol, Oh Sûrya, Oh Indra, Pongol, Pongol!" It is thus that the tiny boy greets his grandsire, and the father hails his son. The festival is fortunate. The great gods, through whose mercy the next and all succeeding harvests alone may come, have accepted the thank-offering. Indra is propitious. The heavy clouds shall come, gravid with rain, when the next season shall come. Seed-time and harvest shall not fail. The garners shall still be crammed with grain, the udders swell with milk for the sustenance of man. Agni, Sûrya, Mitra-for it matters not by which name the god shall be called-will still shine upon the earth, drying up the waters when the grain comes into the ear, gilding and ripening the bending shocks, and making the whole earth laugh for very gladness. The time of fear has gone. Magha can no longer hurt. The king of the gods is satisfied, why should men tremble for the rest?

When the excitement has somewhat subsided, the pot is lifted from the fire and placed before the image of Ganesa, through whose grace no obstacle has prevented the boiling.

As soon as the mess is a little cooled, a portion is taken out of the pot and placed in a leaf platter before the god, who is asked to eat of it. When time has been given, and no movement is made, the share of the deity is taken away and given to the cow. Meanwhile, the second courtyard has been swept and prepared for the feast. In the centre is a huge dish, if such it may be called, when it consists only of some scores of leaves sewn together. Round the circumference of a circle. of which the dish is the centre, are set as many plates (sewn leaves) as there are persons in the house, counting women. servants, visitors, and relations. Then the pot is carried in. followed by the trooping guests. As soon as the vessel is emptied on the dish, each reaches his hand and crowns his platter with enough of the savoury and steamy food. When all are served, a moment's silence ensues, and then the master of the house lifts his plate in both his hands above his head. The guests do the same, and then all shout together, "Sûrya, Sûrya, Oh Sûrya, we offer this to thee. Eat thou, Oh god. the food we offer. Thou didst give to us." This done, the plates are again laid on the ground, and the meal commences. In five minutes the platters are clean and the meal is done. The dish, with as much rice as remains, is then taken outside, and either given to the cows or bestowed upon the mendicants, whose golden season is passing swiftly from them.

Such is the festival of the Pongol or boiling, and such it has been for thousands of years perhaps. Is not its mere description sufficient to mark it as altogether different from every Pauranic celebration? Does it not bring back to us something of what the Jewish feast of ingathering was in the times of Hebrew glory? I have not been able to trace many actual notices of the feast from such Vedic literature as is at my disposal, but there are many points in the narration which cannot be other than primitive, so contrary are they to modern Brahmanism, and so consonant with what we know to have been the custom of the Aryan race. First, with regard to the glad shout which hails the boiling, may we not see something like it in the last verse of Rig Veda, i. 141 (Wilson, vol. ii. p. 71), where we read—

"Agni, possessing eminent (fitness) for supreme sovereignty, has been glorified by us with holy rites and with hymns. Let all who are present, as well as we ourselves, enriched (by his favour), shout aloud (the praise of Agni) as (loudly as) the sun (causes) the rain cloud (to thunder)." passage exhibits the worship and praise of Agni as being performed by visitors and servants—"Let all who are present, as well as ourselves." It exhibits them as joining in the shout of praise. The "enriching by his favour" is the harvest, the "renovation of all that is eaten." We have seen the holy rites—the hymns alone are missing. How remarkable is the common feast at which women and servants -men of inferior caste-may sit and eat! Does not this remind us of a time when, bound by a common danger, fighting a common enemy, and looking for a common good, the race was one differing in wealth and position, but not in blood or caste? At other times the wife may only eat her husband's leavings; the servant may not touch his master's food, or be seen eating his own. Now all sit at one repast. There is no question of superior or inferior. God has blessed them all alike with food. The rain descended, and the sun shone on the evil and on the good. There are, it is true, unholy rites among the Brahmans, where, under cover of the night, deeds are done that set at nought all laws of caste, religion, or the plainest morality. But these are modern. They are hidden in darkness, and their very perpetrators are ashamed to have their doings known even to their co-religionists. But the Pongol is domestic. It is open to the day. It is old, and opposed to every tenet of their religion as popularly taught. The levelling of distinctions of sex and caste is for a good purpose, and based on a fact of universal importance. The ingathering is as old as the race in India, and there can be little doubt that the feast has come down from primitive times, bearing witness against caste as an innovation, a thing unknown to their early forefathers.

But again. No Brahmans are present. The master of the house is the leader of the feast. Gifts are made in profusion, but they are to mothers and sons-in-law, to cows, calves, and beggars. The very offering to Pillaiyâr or Ganesa, which at all other times is a perquisite of the priest, is now given to the cows or to the poor. There is a purohita or "man put forward," but he is not a Brahman; he is the master of the house or his eldest son.

There is no image but that of Ganesa. Lapse of time has run Agni and Sûrya into one, but the process is apparent in the Rig Veda. Indra is universally accepted as the presiding deity, but appears to have subsided into the silent king of the gods, and almost every rite is dedicated to the Sun-god. who is, as it were, the active deputy, the functionary who is the sole means of approach to the higher deity. The messenger of the gods can make or mar the message he carries. and it is better to please him than to adore the more dignified but less active members of the Pantheon. Puranism has done something to degrade the ceremony, for while the people know that they must worship Agni, they have forgotten why; and the modern Mercury-Ganesa-has been introduced to perform the very work for which Agni was first invoked; to remove obstacles, protect the ceremony, and carry to Swarga (the abode of the gods) the adoration offered. There is, therefore, now a curious duplication of deities, to perform the same duty, in which the gross Pauranic idol has occupied the place of the elemental deity. To put the fact in Indian official language, we may say that Ganesa has been appointed averter of obstacles, vice Agni, promoted.

But we must return to the feast. As soon as the meal is despatched, there is quiet for a time, while exhausted nature recruits itself with a siesta. As soon, however, as the sun has well declined towards the west, every house is again in a bustle; men, women, and children put on their best. This is saying no slight thing, for the store of jewels is the store of wealth. Where banks are unknown, and the remembrance of plundering Mahrattas and Pindarries has not died away, wealth must be kept in small compass. It must not be trusted to the care of others. It is not long ago since every house had its caché—a secret recess or pit, or may be some cunningly hidden hole under the wall, or among the roots of the mango

or palmyra tree. On the eve of great festivals, the night was the scene of soft stealing to these hiding-places, and taking thence the jewels that were to give due honour to the day. When they were put away again, some moonless night was waited for, so that no neighbour or friend might have it within his power to confess, under the tortures of ingeniously cruel marauders, where the prize was secreted. Now, each house has its strong box, well clamped and bound with iron or brass, and guarded by some complex letter-lock, which no illiterate servant can decipher. The box is frequently the couch of its owner, so that it may not be stealthily conveyed away while he sleeps. However that may be, all its treasures are given up now, golden-threaded turbans, heavy bullioned sarees, rings for nose, ears, fingers, wrists, and ankles; chains for the neck; gold plates for the crown of the head, and jewelled rosettes for the forehead; buttons and rosaries of dragon guineas or Australian sovereigns-all are produced and applied to the purpose for which they were designed: and soon the men appear, white and glistening, and the women bowing down almost under the weight of their ornaments. The occasion is a special one, so is the display. The Hindus are not a visiting nation by any means, and they suffer in consequence; for no nation can, with impunity, forget the great fact that mankind is one great family. The isolation which is produced by unsocial habits has been one great cause of the utter helplessness of the nation in the presence of invaders or usurpers. But in the Pongol we again see traces of better times, when, as a pastoral race, the Aryans knew how sweet was sympathy, how strong the tie of hospitality. The Pongol is one long series of visits, entertainments, and social joys. So now, when the air is cool and pleasant, the males of every family—that is the young men—proceed on a round of visits. In every case a present must be given and received. If the village be rural, and manners have not been corrupted by Western innovations, a couple of men with pipe, tom-tom or guitar, precede the party, and give notice of its coming. At Pongol every musician is fully employed, and the discord which fills the streets, while the visits are being paid,

is ear-rending. The presents are borne by a servant, and consist of new chatties, spices, or other portable articles of value, proportioned to the means of the giver. When two parties meet in the street they halt, and a colloquy ensues after this fashion, "Has the milk boiled?" "It has boiled through God's grace and your favour." "Did the milk bubble soon?" "Yes, the deity is propitious, because of your favour." After a few more words, they each give the parting benediction-"May good luck rest on the year for you!"-and move on to fulfil their errands. At each house the same dialogue takes place. In every house of every street from tongue to tongue flies the same question, solemnly put, "Has the milk boiled?" Equally solemn comes the invariable answer, "It has boiled." Even strangers meeting in the street ask and answer the question as they pass, it matters not what their caste. But I have forgotten the main object of the visit, to ask for "the pleasure of their company" at the evening's entertainment. With the latter the day closes, and before ten o'clock all respectable folk have retired for the night.

With earliest dawn on the following morning all are stirring. This, the third day of the feast, is Mâttu Pongol, or the Pongol of cattle. The slow but hard-working bullock is to have his holiday, though no little teasing, and perhaps torment, is first to give him a relish for his unwonted delights. In what follows we see again a time when cattle were the staff and stay of their masters-when, without their milk and clarified butter, the gods could not be worshipped-when those same things were food and wealth-when without them no journey could be made in safety, no field could be ploughed, no fire could be made, and no corn could be trodden from the ear. So strong is the instinct, that the ceremonial belongs to another life and religion to that they now see in India, that, as far as I am aware, there is no legend at all widely received that attempts to account for the cattle holiday on Pauranic principles.

As soon as the male population have cleaned their teeth—and the operation is so prolonged and elaborate that

it deserves to take the highest place in the Hindu toiletthey betake themselves to the nearest sacred tank, driving or dragging with them the whole bovine possessions of the village. Now takes place a general wash. As on the previous days their masters had taken special care to ensure cleanliness of person, so now each cow and bullock must undergo a most searching lavatory process. A wisp of straw serves for the rubbing, and before long every part of the long-suffering animals is as clean as clean can be. Then all are driven home and the adornment commences. First the horns are carefully painted red, blue, green, or yellow. If the owner be rich, gold leaf is employed, or brilliant tinsel. Then heavy garlands of flowers are brought forth and placed on the horns, round the neck, or over the quarters of the patient beast. Meanwhile, the women have prepared another new chatty, filling it with water, and then steeping within some saffron, cotton seeds, and margosa leaves. When the water is yellow and bitter, it is ready. The master of the ceremonial, usually the head of the house, comes for it, and places himself at the head of a procession of all the menthe women may not see the rite we now describe. In solemn silence they march round each animal four times, while the first man sprinkles the bitter water upon it and the ground as often as they pass the four cardinal points of the compass. This done, the pot is placed on the ground, and each male in turn performs to each animal the Sashtangam or prostration of the eight members of the body. This is the highest possible token of reverence, and receives its name from the mode in which it is performed. The person first falls on his knees, and then, stretching out his arms, he bows to the ground until his forehead touches the soil. At the same moment by bending inwards, he causes his stomach to touch the ground, and thus at that instant, his feet, knees, stomach, forehead, and arms (from the elbow to the fingers), or eight members in all, are as lowly bent as is possible, betokening the greatest depth of humility and reverence. As Dubois very properly says-"It is used nowhere but in the presence of those to whom an absolute and unlimited deference is due."

This done, the public—that is, the women and children are again admitted, and to the juveniles the most exciting ceremony of the feast is commenced. The patient cattle are led out one by one into the street, and there receive their final adornment. Strings of cocoanuts, plantains, bells, or anything else that will swing from neck or horns, are fastened as securely as may be under the circumstances. As will be imagined, the cattle are not very patient under the process, but they are usually very good-tempered and hurt no one. Soon every animal in the village is duly bedizened and discomforted. A moment of silence succeeds, while the villagers look on or wonder among themselves whose son will be most distinguished in the affray that it is to follow. Then, at a given signal, every rope is untied-every tom-tom, pipe or guitar is banged or blown to the extreme of its endurance every woman screams and every urchin yells, and in an instant the herd-hitherto so patient-is careering down the street in an extremity of terror. But their flight brings new sufferings. The cocoanuts swing at every lurch, and bruise nose and knees, or thunder on the horns. New terrors urge on the crowd, for to every tail is clinging some eager boy, eager to rob the plantains, bells, or nuts. The glory of the day is, that every one who can may possess himself of whatever is carried by the cattle, and boast of his prowess and his spoils. No little skill and a vast amount of courage are shown by the "timid" Hindus in this dangerous and exciting pell-mell, and soon peace reigns again, when the oxen have returned to their pristine nudity. Their troubles are over, and a holiday of the best possible character succeeds. The cows may go where they like-into field, garner, or shop. They may eat whatever their souls incline unto, so long as they can get it without help from men. The chetties (shopkeepers) tremble to-day, for many a sly push is given to direct the cattle to the stores of a hard creditor, or usurious grain-dealer, and woe be to the man if he would drive away by stroke or word the marauding bullock.

The next day is Kanru Pongol, or Pongol of calves. In this the rising herd receive treatment as kind and yet as cruel as fell to the lot of their parents on the preceding day. Again the boys gorge themselves with stolen, but well-earned fruit, and again there are a score of hair-breadth escapes from broken limbs or gored bodies.

On the evening of this day we find the only token of corruption in the ceremonial. In almost all the public festivals it is the custom for the Brahmans to carry the temple idols through the streets, attended by dancing girls, torches, blue lights, Bengal fires, and the dense but good-humoured crowd which the sight is sure to attract. After having thus perambulated the town, the images are carried back to their places and a great portion of the crowd is sure to enter the temples and make those offerings of pice, ghee, and rice, which it is the object of the priest to gain. On the last great night of Pongol, this ceremony is gone through. Both oxen and calves are collected at the end of the town, opposite to the temple, and then, in grand procession, come all the deities of the locality; the reflexion of the lights brightens the sky, as if some house were on fire. The crowd is so dense that locomotion becomes almost impossible, as the procession slowly surges At every hundred yards or so, a halt is made, and the dancing girls go through their most admired postures. It is the fashion to call these dances lascivious, and I may not run counter to it; but I have seen many a dance (at Nautch) in procession. and in the hall of some of the most ancient temples, without ever seeing anything that could by any possibility be called indecent. The postures resemble most of all the solemn minuets in which our grandmothers sailed across the floors of the ball-room, and are religious exercises compared with our polkas and waltzes. It is true that the songs are bad enough, but they are no worse than the stories contained in our university text books. Besides, even here the songs have the best of it, for the dancing girls suffer under the infirmity which afflicts almost all our own lady-singers, they cannot give the words of their songs so that they may be understood. Be this as it may, the procession creeps along till it reaches the assembled herd. A long halt is now made, and dances and songs begin afresh. Dubois describes a ceremonial as

occurring at this time, which I have not seen; as, however, it is interesting, and the Abbé is seldom incorrect, I will add the account in his own words (Dubois, 2nd ed., 1862, p. 286). "The whole terminates with a piece of diversion, which appears to be waggishness, rather than any part of the ceremony. The numerous rabble who are present form themselves into a ring, and a live hare is let go in the midst of it. Poor puss, finding no outlet by which it can escape, flies to one side and the other, sometimes making a spring over the heads of the throng, which produces incredible mirth in the crowd, till the creature is at length worn-out and caught."

The procession now wends its way back to the pagoda, and the outward ceremonial of the Pongol ceases. The whole population rests for three more days, and unlimited hospitality is the rule. Every evening is devoted to visiting, and usually a set of friends arrange that while each gives but one entertainment, the whole enjoy a feast every night. Caste is for the nonce forgotten, but as throughout the year intimate friendship has been limited by caste, and new friendships cannot be made all at once, it is not often that the ordinary rules of caste are absolutely broken. At every visit presents must be given and received, and as they frequently take the form of ornaments moulded in pure sugar, it may be imagined that the children have a fine time of it. On the evening of the last day there is a feast for the girls alone—the only time in the year when their separate existence is remembered. They

<sup>&</sup>lt;sup>1</sup> M. Sonnerat, who, in his "Voyage aux Indes Orientales et à la Chine" (Paris, 1782), gives a brief account of the Pongol (vol. i. p. 240), mentions another ceremony in connexion, it would seem, with the one here described. He says—"Le soir on porte la figure du Dieu; processionnellement dans les campagnes. L'idole est placée sur un cheval de bois, dont les pieds de devant sons levés comme s'il galopoit, ceux de derrière sont posés sur une table de bois, portée par quatre hommes. Ils observent dans la marche d'aller en travers comme un cheval qui se câbre et qui rue; l'idole tient une lance à la main, et elle est censée aller à la chasse; on tue un animal réservé pour cette fête; il doit être quadrupède, choisi indifféremment depuis le tigre jusqu'au rat. On examine surtout le côté qu'il prend, quand on le lâche, pour en tirer des augures. Ce même jour les Brames jettent des sorts pour connôtre les événemens de l'année suivante. Les animaux et les grains sur lesquels ils tombent, deviendront, disentils, très-rares; si c'est sur les bœufs et le Nély (riz en paille), les bœufs périront et le nély sera très-cher; s'ils tombent sur les chevaux et les éléphans, c'est signe de guerre." I have made every inquiry regarding the practice described by Sonnerat, but can find no evidence that it is observed now.

may not go out, except to pass quickly from one house to another, and look forward with longing indescribable to this their solitary festivity. A picture of a peacock, resplendent with tinsel and colour, is hung up in one of the rooms, and as evening draws on, the girls assemble before it. They bow to the picture in turn, and imitate, as well as they can, the ceremonial adopted by their fathers and brothers in their worship. Sweetmeats are handed round, and if the host be rich, presents of cloth, jewels, bangles, &c., are made to each visitor. Then the house-mother tells some story about the blessings that must fall to an obedient wife; or perhaps the father reads a chapter from the more romantic portions of the Mahâbhârata or Râmâyana. The evening winds up with chat as to the husbands each girl would like, or fears to have, and many a stern mother-in-law is dissected and favoured with due maledictions. By nine o'clock all good folks should be in bed, and before that hour the party has broken up.

As the last visitor enters the door of her home the Pongol ceases. The stern duties of life have been thrown into a week's arrears. Brahmanical and Pauranic ceremonial take the place of the simple Vedic festivity. Indra, Agni, and Sûrya go out of mind till ingathering comes round again, and

Vishņu, Siva, and Krishņa are alone adored.

ART. V.—The Poetry of Mohamed Rabadan, of Arragon. By the Right Hon. Lord Stanley of Alderley.

(Continued from Vol. IV. p. 177.)

ISTORIA DE HEXIM HIJO DE ABDULMUNEF Y BISA-GUELO DE NUESTRO ANNABI MUHAMAD SALAM. CONTIENE QUATRO CANTOS.

Ya queda atrás referido Como la luz de Muhamad Primero que la sacase El que mereció llevarla, Sus madres la entretenian Mientras estaban preñadas; Cuyas caras mas hermosas Que la luna se mostraban; Pues como Hexim casase Con mugeres de su casta Y en ellas tuviese hijos Segun al Hasan señala Siete varones y hembras Y la luz siempre asentada Estaba sobre su frente Que ninguno la sacaba Y esto se le hacia de mal Y le daba pena tanta, Que todos dias orando Al derredor del Alcaeba, Andaba rogando ad Allah Le dé un hijo por quien mudada Sea la luz de su frente, Y al debido curso vaya. Andaba, pues, desta suerte Con esta ansia cotidiana Quando durmiendo una noche, Oyó una voz que le habla: "Anda, ves a Yaciriba, Dó hallaras que te aguarda Una muger de alto prez, Rica y muy acaudalada, Limpia, casta y muy honesta En esta será mudada Esa luz, que te da pena Ques digna de tal comanda;

En esta tendrás un hijo De la linea enxalzada. Ella se dice Zalma, Omar su padre se llama." Hexim despertó admirado Y juntando su compaña Les da¹ cuenta de aquel caso Quel Señor le revelaba. A todos pareció bien, Y el que mostraba mas gana Era su hermano Almutalib, Y respondió estas palabras: "Ya sabes, querido hermano, Que te han sido señaladas Hijas de Reyes y grandes, Y otras de muy grandes famas, Para casarte con ellas, Y jamás les fué aceptada Voluntad de nuestra parte; Porque esta nuestra prosapia, Mas que de Reyes, estima La limpieza y su alleganza; Y agora digo ques bien Que lo que se negó á tantas, A esta se le conceda. Por ser digna desta palma, Yo la conozco muy bien A Zalma, su padre y casa:2 Es muger gallarda y bella, Lo que puede ser de honrada, Cumplida de entendimiento, Afable, honesta, estimada, Entre todas conocida, Tenida y reverenciada En Yaciriba y su tiera, Donde se estiende su fama,

<sup>&</sup>lt;sup>1</sup> Dió, Paris MS.

<sup>&</sup>lt;sup>2</sup> Casta, P.

Mira como quies que sea; O si quieres que yo vaya A pidilla en casamiento, Iré de muy buena gana, Porques mal perdido tiempo Queste caso se dilata." Dixó Hexim: "si os parece, En esta alegre jornada Yo quiero ser mensajero, Que Dios ansi me lo manda; Iré yo en compañia vuestra A esta que tanto me alabas: Iremos haciendo prueba De la obra que nos llama." Todos ellos respondieron: "Hagase como lo mandas, Que nos te aconpañaremos Con aficion voluntaria." Con esto se aparejaron, Y otro dia de mañana Sus hermanos y parientes, Y toda aquella compaña De los de Abdulmunef,<sup>1</sup> Con gran gozo aderezaban: Muchos camellos cargaron <sup>2</sup> De sus provisiones y armas; Y con todo este aparato Hexim se despide, y marcha Con quareinta caballeros, Todos señores de salva; Parten contentos y alegres, Y él su persona arreada Con vestidos de Aliaman Trae<sup>3</sup> rica y bien labrada, Tendido el pendon antiguo De Miçer, que lo llevaba Por insignia antigua y grave Desta linea ilustrada. Llegaron á Yaciriba De noche, y como entraban, La luz de la frente de Hexim Entraba por las ventanas De las casas, y salian Las gentes maravilladas De ver qué podia ser Aquello que relumbraba

Por las hendrijas y puertas, Y dentro de sus moradas Clareaba qual los rayos Del sol y la luna clara. Y como viesen entrar Tan hermosa cabalgada, Llamabanse unos á otros A grandes vozes que salgan A ver tan lucida gente, A quien todos preguntaban, Deseosos de saber Quien eran ó qué buscaban. Decian: "Quién sois vosotros? Que gente tan noble y rara, No vimos en nuestra tierra,<sup>5</sup>  ${
m Y}$  mas $^6$  que en su cara Lleva esos ramos de luz Que desde los cielos baxa." Almutalib responde: "Somos de la casa santa Moradores, y vecinos De Allah en su silla estimada: Somos de los de Curax,<sup>8</sup> Del linaje, tribu y raza De la gran casa de Caebu. Hijo de Luai, quen Maca Es nuestro asiento y guarida, Villa de Allah especialada. Este es nuestro hermano Hexim, Especialado en la gracia, Y viene á vuestras honras La suya sea ayudada, Y que en vuestra ciudad sea Esta luz aposentada, Por Zalma, hija de Omar Unica, y de que á esta causa 10 Somos venidos, qual veis, Desde nuestras propias casas." Omar, que en esta ocasion Entre las gentes estaba, Respondió con alegria: "Buena sea vuestra llegada, O varones enxalzados, Señores de la alabanza. De alteza y enxalzamiento, Principes de la silla alta,

Quando su estrecho juicio Quiere que se cumpla y haga. Estaba en esta ocasion Zalma de donde miraba La gente, la luz y á Hexim, Sin que ella fuese mirada De nadi, y decia entre si, Quando en Hexim contemplaba Su claredad y hermosura: "¡O qué¹ bien aventurada Será la que a ti se allegue En coyugal alleganza! ; O él de la cara hermosa, De la luz cumplida y alta!" Estaba tan plazentera Y tanto desto gustaba, Que de la grande alegria Las carnes le tremolaban; Quando llegó con gran priesa Su padre, y ansi le habla: "Have albricias hija mia De una embaxada, que causa A tu padre gran contento, Y á ti ennoblece y enxalza." Dexame, padre, responde, "No me digas ahora nada, No me diviertas la vista Ni á mi me hables palabra:2 Que las albriçias mayores, La nobleza y alabanza, La riqueza y la grandeza, El cumplimiento y la graçia, Y<sup>3</sup> todo quanto este mundo Cine, comprende y abarca, No llega a lo que mis ojos Agora mira y alcanzan<sup>4</sup> En la frente de aquel hombre, Que le relumbra su cara." "Pues esas son mis albriçias, Hija, que por tu causa Viene a casarse contigo, Y es de los taquies de fama, Hexim hijo de Abdulmunef El de la honra enxalzada,5 Varon de alto linaje,

Caudillo y señor de Maca." Quando aquesto oyó á su padre. Quedóse muy atajada, Muy afrentada y corrida De las razones pasadas; Y al fin de muchas que dixo En satisfacion de su falta, Dixó á su padre: "No dudes Que aunque la honra y las gracias Está en esta gente ilustre, Que á todo el mundo aventaja, Si de mi y mi casamiento Se satisface y agrada, Y quieren que yo convenga Con ellos, es cosa llana Que ha de ser quando me cumplan En dote, alhadia<sup>s</sup> y arras, Lo que a mi honor perteneçe, Sin que le falte una dara,9 Y no hiziendolo 10 ansi Sera en vano su llegada." Aquesto decia Zalma Por dar color a su habla, Y que no entienda su padre Su aficion tan á la clara. Era prudente y discreta Trascendida y avisada, Hermosisima y briosa, De lindo cuerpo terciada, En grosura y de faiciones Cumplida y perficionada: Muy paladina de lengua, De sabroso acento y gracia, 11 De apresurada respuesta, Aguda y bien dotrinada, Afable, grata y muy leda, Perfida gracia apurada, 12 Limpia de toda rudeza, Colmada de toda gracia: Y en todo lo sobre dicho Lleva Hexim la ventaja 13 Que quantos le ven le invidian Y enamora á quantos habla. Luego se volvió a su padre Donde dexó la compaña;

Que de contento no coge Merece ser allegada <sup>1</sup> La horá que vea á <sup>2</sup> su hija Que con Hexim sea casada.

Mas que diré de la invidia Del infernal fuego y saña, Que al maldito Lucifer Quema sus fieras entrañas. Buscando medio por donde El casamiento deshaga? Y para poder cumplir Su pésima y mortal rabia, Se puso en traje de viejo De bellas y blancas canas, Ropas largas, venerables, Que la vista aficionaba. Muy paladino de lengua, Y á Zalma se presentaba Con gran recato y crianza, Dando sobre ella azalem³ Muy cumplido y con gran salva, Y apartándola en secreto, Ansi le dice y le habla: "Has de saber, gran señora Que vo soy de la conpaña De Hexim, que á causa suya4 He<sup>5</sup> salido de mi casa, Y á mi invia á que te diga De su venida la causa, Y a los hombres semejantes $^{6}$ Que yo les es grande causa 7 Que mientan á tal señora. Y quel honor de mis canas Dexe de ser manifiesto Donde quiera que se halla; Y aunque soy casamentero. Y me obliga la comanda De Hexim á hazer su parte Has de ser desengañada De mi, de sus condiciones. De sus defetos y tachas; Por que nunca, en ningun tiempo, De tu parte me sea dada Afrenta, ni por los tuyos

Mi cara sea avergonzada.'' Dixó Zalma: ye buen viejo! No calles ni encubras nada; Dime la verdad en todo, Desnuda, patente y clara; Que la mentira en los hombres<sup>s</sup> Es cuchillo de su fama; Y no hay maldad que se yguale Al que con malicia engaña." Dixo aquel ravo de invidia: "Sabe, señora estimada, Que Hexim es muy hermoso, Qual veis, de presencia y cara, Salvo que sus condiçiones Toda su hermosura manchan. Trata mal á sus mugeres No las respeta ni acata: No dura con él ninguna Por muy cuerda y por muy casta Que sea, mas de diez dias, O un mes la que mas duraba; 10 Y quanto fuese en el mundo La mas discreta y honrrada. Dura un año; y á mas desto, Es muy vil, de prendas baxas, Escaso, sin honrra alguna, Nunca guesped vió su casa; Cobarde, triste y medroso. Huye la lid y batalla; Ya le conocen sus vicios En toda nuestra comarca: Por eso viene á la vuestra, Por que en la suya no halla Muger; que de las que tiene Tienen espiriencia tanta<sup>11</sup> En su vicio y malos tratos; Por eso todos se guardan De no convenir con él No sé yo como 12 te agrada Con todo esto que te he dicho, Ques la verdad pura y llana."13 "¿Como me ha de contentar Un hombre, que en él se halla Tan infames propiedades Qual aqui tú me señalas;

Que con la menor de aquellas Pudiera ser escusada Su venida y casamiento, Quanto y mas que son nombradas Tres cosas tan aborridas A los que la honrra guardan: Decir ques cobarde y huye La lid y guerra trabada, Y que dexa las mugeres Siendo ya con él casadas? Homenaje ad Allah hago De no otorgar¹ su demanda Si ya no me hicieran fuerza Con rigor de duras armas; Véte de aqui, viejo, al punto No me repliques palabra." Y asi se fué el enemigo, Dexándola tan ayrada, Quanto arrepentida y triste Por la aficion en que estaba. \* No se contentó con esto El Ebliz esta jornada, Que otras tres vezes volvió Con ropas diferenciadas. Refiriendo las razones De la jornada pasada,2 Por donde venia<sup>3</sup> á ponerla De puro enojo embriaga. En esto llegó su padre Y viendola tan mudada De lo quel habia dexado Con las albriçias pasadas; Le preguntó la ocasion De aquella nueva mudanza. "¿ Como quies, padre, que sea Dixó Zalma, desposada Con hombre que de los suyos Han venido aqui do estaba Tres hombres que me han contado Mil baxezas y mil tachas?" Y dixóle todo aquello Quel axaitan le informara.4 De lo qual quedó espantado Omar, y aunque procuraba Quitarle de la memoria Las informaçiones falsas,

No pudo, porque el Ebliz Aseguró bien su traza.5 Al fin la dexó v se fué Diciendole que ella haga K su libre voluntad: Y ella quedó tan cargada De enojo y de pesadumbre Que no sabia donde estaba. Y como los corazones Son hechos de carne humana, Y los formó en libertad El que los hizó de nada, Quiso su bondad divina Quel Axaitan v sus trazas Fuese roto y abatido. Inflamando sus entrañas A Zalma con amor puro, Que le enciende cuerpo y alma; Y para satisfacerse De las grandes varianzas Que aquel dia habia tenido. Siendo la noche llegada,7 Se desnudó del vestido Que llevaba, y disfrazada Se determinó á salir En busca de quien<sup>8</sup> le causa Aquel amor tan ardiente, Que las entrañas le abrasa. Y asi, en diferente trage Salió acaso 10 de su casa. Preguntando va por Hexim, A quantos topa en la plaza, Hasta que le dió la luz Que desde los cielos baxa Hasta la frente de aquel Que busca con tanta gana: Y respondióle una voz: "Yo soy Hexim, quien me llama?" Y como le dió la luz, Turbóle la vista, y para De su andar estordecida, Temerosa y vislumbrada; Y como la vidó Hexim Espavorida y pasmada, Volvió su cara al un lado

Y luego la luz se aparta. Vieronse estos dos amantes Tan vguales en la llaga, Que punto no se difieren; Ninguno lleva ventaja. Salúdanse el uno al otro Y con sabrosas palabras Se dicen sus pretensiones, Do quedó desengañada Zalma de los falsos dichos Quel Ybliz le denunciaba. Y al fin de todo le dixo Estas palabras formadas: "Respondiendo á lo que dices, O Hexim! doy mi palabra Que soy contenta y me place Ser tu muger qual lo mandas; Pero adviértote una cosa Que aunque en la vida quedaras. Te pidan mas de lo justo, Que no repares en nada; Mira que hay grandes contrarios, Y entre ellos mi nombre y fama Es tenida y reputada Sobre la honra mas alta, Que de aquello y lo demas Te hago derecho y graçia Sobre Allah y su delitaje,2 Que no te será trocada Esta palabra que doy, Sino fita y contrastada." Hexim le agradeció mucho La oferta tan libertada,3 Diciendo: "A ti será dado Lo que su nobleza aguarda, Y todo quanto me pidan Digo que atorgo sin falta." Dixó Zalma: "Una cosa Si te place, me sea dada, Y es que, como sabes soy Muger tenida y preciada, Y me honran en mi ciudad Y obedecen mis palabras; Que no me has de sacar della Ni me has de llevar á Maca." Dixó Hexim: "Soy contento;

: Tienes mas otra demanda?" Dixó Zalma: "Que si acaso Tendré hijos de tu casta, Que no los quites de mi, Sino que estén en mi guarda." Dixó Hexim: "Que me place. Y tan bien aventurada Serás, si parieres hijo, Que parezca esta comanda.4 Quieres otra cosa alguna?" Dixó: "Si acaso te apartas De mi, y con otras mugeres Te fueres, por esta causa Me pueda quitar de ti, Quedando desobligada." "Lo demas que has demandado, Dixó Hexim, muy de gana Otorgo, mas eso no,5 Y no respondo á esa causa, Mira si quies otra cosa Que por tu contento haga." Dixó Zalma: "Harto estoy;6 Yo soy contenta y pagada Con aquello que tú quieres; Levantarte-has de mañana A hacer el casamiento Con toda nuestra compaña:" Y dando azalem los dos Se vuelven a sus posadas. Pues quando vido el Ebliz,7 Que sus malditas marañas Ninguna surtió en efeto, Todas fueron desligadas,<sup>8</sup> Hīzó ajuntar los Judios Que en el mercado se hallan, Para incitarlos á ira, Todo por la enemiganza Que contra Muhamad tiene, De su salida y estada, Porque de su nacimiento, Tanto daño se le amanaº Que asolará la heregia Ques su sustento y vianda. Estaba, pues, aquel dia Lleno el mercado y sus plazas De los vecinos Judios.

Y de toda la comarca, De las villas y castillos; Que no quedó esta jornada Judio que no viniese A esta boda emplazada; Y en medio de tanta gente Enemiga y adversaria De la compañia escogida, Se les presenta y prepara En figura de hombre sabio, Cuya presencia enseñaba Un aspecto de hombre antigo,1 Ropa larga y barba blanca; Y como venir lo vieron. Aquella fiera canalla, Con muy grande reverencia Lo reciben y lo honraban, Besando su mano y ropa, Y la tierra do el pisaba,<sup>2</sup> La cogian a gran priesa, Y para salud la guardan, Diciendo: "Como señor No nos ha sido avisada Tu venida, y no cayera Sobre nosotros la falta De salirte a recebir? Perdona nuestra ignorancia." Dixó el Ebliz: "Anoche vine, Nunca fuera mi llegada, Ni pisara en vuestra villa, Ni viera lo que se trata; Y no veis³ lo que yo veo. ; No habeis visto esa4 compaña De Maca?" dixeron: "Si." "Pues en esa cavalgada No visteis un hombre en ellos De muy hermosa asomada, Que le relunbra su frente Con una luz, que se llama Hexim, y viene a casarse, Segun que va dello hay fama Con Zalma?" dixeron: "Si." "Pues tened por cosa llana. Que si casa entre vosotros, Os pesara en las entrañas, Porque os quitará los algos,

Vuestro sosiego amenaza. Cautivará vuestros hijos, Comerá vuestras viandas. Y os vendrá á señorear A todos de banda á banda Este es aquel que los sabios En la escriptura señalan Derramador de las sangres: Ved que confusion tan brava! ¿ Que es lo que determinais En remedio desta llama?" Dixó Armon: ya les he dicho Ques este aquel que se llama Deshacedor de las leyes Y el que las traiciones arma." Dixó el Ebliz: "Si vosotros Determinais que se haga Remedio, cortad el arbol, Y no creceran sus ramas. Cumpliréis vuestros deseos. Libertaréis vuestra patria Deste monstruo sin segundo; Y para que de aqui salga El efeto que aguardamos, Quando venga á la mañana. Que á demandar á Zalma El casamentero vaya, Haciendo su parlamento, Turbalde todos su platica,<sup>5</sup> Diciendo que no quereis Consentir que sea casada Fuera de su propia tierra, Y á las primeras palabras Dad sobre ellos de improviso Con vuestras furiosas armas, De suerta que todos mueran A vuestras manos y espadas; Que al fin ellos son muy pocos, Gente triste, descuidada; Y pues vos otros sois muchos, Juntad una fuerte esquadra De quatro cientos varones, Armados de suerte, que haya Diez para cada uno dellos, Y hareis á vuestra salva; Que yo estaré alli entre tanto 6

Y haré de muy buena gana Todo quanto mal pudiere Contra la parte contraria." Esto dixó el malaon,¹ Y ellos todos afirmaban Aquel consejo por bueno Y al efeto se aprestaban. Y asi pasaron la noche, (Con su cautela trazada. Dice al-Hassan que esta noche, ) Hexim se acostó en su cama, Y vió en su dormir un sueño: Que unos perros le cercaban, Y se le ponian delante Con las colas enroscadas, Batiendo fieros aullidos; Y como que con su rabia, Querian saltar sobrél. Y él tirando de su espada Les cercenaba los rostros, Y aquellos que mas mostraban Ser mas bravos que los otros, Su espada los alcanzaba. Despertóse espavorido, Y llamando su azihaba<sup>3</sup> Les dió parte de aquel sueño, De lo qual se admiraban. "Si dices lo que coliges 4

Que desta absolucion salga?" Dixó: "Sabed questos perros Son gente perversa y mala, Invidiosos, que procuran Todo mal, toda zizaña, Allah sea con nosotros, Nuestra ayuda y nuestra guarda, Y nos defiende de aquellos Quen nuestra contra se amanan; 6 Adviertoos, queridos deudos, Pues en vosotros se halla El valor y la cordura, La prudencia y la constancia, Estéis en alerta todos, Apercebid vuestras armas, Mirad con atentos ojos A todas partes, no haya En vosotros negligencia, Cuydado si, y vigilanza, Siempre las manos asidas En el puño de la espada, Porque si acaso se ofrece, Podais bien exercitallas; Quen solo Allah y vuestros brazos Estriba la buena andanza." Todos ansi lo ofrecieron, Y á lo emplazado se amanan.

## SEGUNDO CANTO DE LA HISTORIA DE HEXIM. TRATA LA CONCLUSION DE SU CASAMIENTO.

Al tiempo quel alba bella Enseña su rostro alegre, Y rompiendo las tinieblas Su clara luz resplandece, Quando ya el austruo cobija, Y a todas partes se estiende, Dando las nuevas quel dia En su seguimiento viene, Y el roxo Apolo tras ellas, Dorando los campos verdes; Quando las aves noturnas Se recogen a su albergue,

Y las que la luz gobierna El delgado viento hienden: Quando los hombres despiertan Y el pesado sueño vencen, Para dar á su Hacedor El debito que le deben; A este tiempo la compaña Del hijo de Abdulmunef Se levantan, y aperçiben Al casamiento solemne. Hazen primero oracion Y limpieza de azigueque,

el maldecido.

<sup>4</sup> Y dicenle: ¿ que coliges, P.
6 Que en contra nuestra se amanan, P.

Y con preciosos olores Sus bellas ropas guarnecen Con resinas olorientas, Con almizcadas especies, Y en sus cavallos bien puestos, Con sus pajes v sirvientes. Marchan todos al mercado Con graciosos continentes: Y en entendiendo Zalma. Que ya la compaña viene, Mando á su padre y sus deudos Que se apresten y aderecen A recebir los de Maca, Y que á ello<sup>2</sup> se aparejen Los mas preciosos asientos. Adonde los aposienten Con gran honra y alegria, Qual su valor lo merece. Hizó armar ella una tienda 3 En campo raso, dó fuese Recogida, y á los suyos (Les advirtió salieren,)4 Todos ad acompañarla; Y mandó tender tapetes, Mesas lindas y abundantes. Muy delicados comeres. En esto asomó el pendon De la compaña, do vienen Quareinta principes, tales Que en el mundo par no tienen, Sobre caballos ligeros. Preciosisimos jaezes, Arreos lindos, galanes, Bordados de todas suertes, Ropas largas, rozagantes, Con vistosos arrideles<sup>5</sup> Debaxo sus fuertes armas, Para si acaso se ofrece. Hexim iba muy galan Qual á su estado conviene, Vestido al antiguo trage,6 Parece estremadamente. Aquellos arreos que lleva Ya de muy atras los tiene; No los envejece el tiempo,

Por que el tiempo no envejeçe Lo ques sin tiempo criado. Siempre en un ser pertenece.7 (Una alborada o camisa)<sup>8</sup> De su padre Abdulmenef. Guarneçida y plateada, Y sobre su linda frente. La corona de Cuzai, De quien era decendiente; El aridel de Curax.º Todos prinçipes y Reyes. Llevaba en sus pies calzados, Como en tales cosas suelen, Los zapatos del gran Siz, Oh, que bien que le parecen! Quen todos los pies se ciñen Qual de su hechura fuesen.10 Llevaba el baston de Brahim Y el arco del fuerte Izméil. Y la estimada divisa De Micer al ayre tiende; Y él en medio su compaña Como el sol quen el oriente Asoma, y sus claros rayos Doran las tierras campestres, Ansi la luz de su cara Todo el mercado conprende, Que quantos ojos le miran, Su clara vista amedrece; Pues quando venir le vieron, La gente noble y parientes De Zalma se adelantaron Con muestras graves y alegres, Todos con muy lindas fazes,11 Le paz y salud se tienden; 12 Y ansi, los aposentaron Segun la usanza que tienen. Acudió grande jentio, Luego el Ebliz con los Judios, Aquellos fieros 13 infieles; Acudieron muchas gentes De naciones diferentes, De Yaciriba y su tierra, Al casamiento presente. Y estando en sosiego todos,

Porque á nosotros conviene Allegar á vuestras honras. Con los quales se ennoblecen Nuestro linage y estado. Y nuestro nombre engrandece,1 Digo que yo y mi hija El alhadia y presente Serémos con toda graçia Para vosotros y á Hexim; Empero ya os es notorio El alto precio que tiene El estado de mi hija, La virtud en que florece Es2 caudal tan poderoso; La riqueza é interese, Qué es lo que señalais En su dote conpetente, \*Que á todos los circunstantes \*Satisfaga v acontente?" Dixó Abdulmutalib: darle hemos Cien annecas muy valientes, Nuevas grandes y bragadas, Ved qué mas os apetece." Estaba en esta ocasion Aquella infernal serpiente Junto á Omar, y aceñole Ser poco, que no lo hiciese : Dixó Omar: "O mancebo! No iguala lo que prometes Al estado de mi hija; Alarga, si te parece." Dixó: "Darle hemos mil doblas Gazarinas,4 juntamente Con las annecas," y á esto Dixó el Ebliz: "Di que no quieres; Ques muy poco lo que manda, Y á tu hija no conviene." Dixó Omar: "Bueno es eso Que mandas, empero crece Mas de aquello que has mandado." "Pues para que os acontente, Dixó Almutalib, darle hemos, Con que su persona arree, Treynta ropas escogidas

En Misera y Alireque,<sup>5</sup> Texidas de seda y oro, Cautias6 hechas de arbete; Sois contento?" Y el maldito Aceñole que no lo hiciese. Omar con grande verguenza Volvió á decir: "Ciertamente Es mucho lo que has mandado, Y por tal se os agradece; Pero acrece alguna cosa Sobre lo que dicho tienes." "Creceré dixó Almutalib, Porque á vuestro gusto llegue, \*Mas cien aludas de alambre \*Y otras cienº de almisque lleve, Y diez caxones de alcanfor, Ved si contentar os puede.' Y como el maldito Ebliz No hay cosa que le averguence, Volvió á decir: "Ques poco Quanto te mandan y ofrecen." Volvio Omar sobre Ebliz, Ayrado, y dice: "No temes, \*Viejo invidioso, malvado, \*Que desta suerte me afrentes? \*Hasta quando ha de durar \*Tu desverguenza en traerme 10 Que les demande mas dote De aquello que mandar deben? Que yo me siento corrido Ver la sufrencia que tiene A tan prodigas demandas, Quel por su bondad promete."11 "Si á ti te pareçe mucho A nosotros nos parece Ques poco y debes pidir Lo que ellos cumplir no pueden, Que nosotros cumpliremos Con mucho mas interese El derecho de tu hija, Y daremos en rehenes Annecas, ropas, cautivos, Y pues el no pertenece Casar con Zalma pidilde Mucho mas de lo que tiene."

A esto dixó Almutalib: "Dí tú, viejo, lo que quieres; Veamos lo que propones Y si será suficiente Tu razon la cumpliremos, Aunque mas algo nos cueste." "Pues advierte, dixó Ebliz, El dote que habeis de hacerle, Conforme al estado suyo, Que es en la forma siguiente: Que le fragues un alcazar Muy alto, que se sustente En los aires, de manera Que admire á quantos la vieren; Tenga en largo una jornada Y en anchario lo siguiente 1 Otro tanto, y en alteza Sobrepuje á quantos fueren; Que desde sus miradores Se pueda ver claramente Los navios quen la mar Naveguen hacia poniente, Apartamiento de un mes, Quanto la vista comprende; Y que le caveis un rio, Que dentro el alcazar dentre, Y en él se partan tres ramos Con caudalosas corrientes, Que por qualquiera de aquellos Que los<sup>2</sup> navios naveguen: Y en todas estas orillas Destos rios plantar deben Datileras al<sup>3</sup> compas Que unas á otras se mezclen Y estas que produzgan fruta En todo tiempo igualmente, Madura, tierna, sabrosa, Todo genero despecies, Y que lleguen estos rios, Plantados de aquesta suerte, Desde las mares de Uzmen, Hasta entrar en Alireque." Almutalib que va estaba De la colera impaciente Le dice: "Calla, malvado,

Falso lleno de dobleces. Invidioso, viejo malo, Que ya en lo que dicho tienes Se conoce tu malicia; No hay para qué nos enseñes Tus desatientos de loco, Tus malditos acidentes" "Yo cumpliré, dixó Ebliz, Lo que digo, y mas si quieren ; Cásenme á mi con Zalma, Y lancen de aqui esta gente : Que, como lo quieren ellos, Es justo que aqui se quede Entre nosotros casada Mejor que con el ausente." En esto gritó Zalma De manera que la oyesen Todos los que estaban fuera, Diciendoles que no otorguen Ni admitan los falsos dichos De aquel viejo inpertinente. A esto replicó Armon, Aquel tirano rebelde: "Pesar para vuestro dicho Y á vuestro consejo cueste; 5 Es sabio de los mas sabios El abid<sup>6</sup> santo, que tiene Fama en Axem<sup>7</sup> y Aliraque Y es justo lo que defiende, Que te quedes entre nos Que no que de aqui te lleven; Y nosotros cumplirémos Todo lo quellos ofrecen,<sup>8</sup> Sin faltar en cosa alguna, Y te<sup>9</sup> darémos mas si quieres." Dixó Zalma: "No hais verguenza En vuestras caras raheces 10 De querer ser importunos A quien tanto os aborrece? Que ni quiero á vuestros algos, Ni los quese viejo chehil<sup>8</sup> Propone con su malicia; Que quanto aqui dice miente. Ni á él ni á vosotros quiero, Ni aunque el mundo se atraviese,

Solo Hexim me contenta, Los demás no me amolesten." Respondió el traidor de Armon: "Pues no será lo que quieres; Que aqui te habrás de quedar, Aunque pese á quantos pese." Y aseñando á los Judios. Dandoles voces crueles, Sacan las ocultas armas, Y en el punto questo veen Los hijos de Abdulmunef, Como que se desenvuelven, \*Viendo declarado el sueño \*Que soño su hermano Hexim, \*Ponen mano a las espadas \* Como leones valientes. Y con corage encendido Solos quareinta acometen Aquel feroz esquadron De tanta maldita gente; Y aunque eran pocos los nuestros, El coraje los enciende De la generosa sangre Que dentro del pecho hierve. Dan sobre aquellos traidores, Destruyen, matan y hieren,1 Desgoviernan, parten, cortan, Derriban, matan y hienden, Corren, golpean, deshacen, Aqui acuden, allí vuelven, Espántanse sus contrarios, Huyen, blasfeman y temen, Corre sangre aquel mercado, Que por tantas partes vierten. Ya los cuerpos se amontonan De los que á sus manos mueren Sin defensa, que defiende Estos rayos de la muerte. Sobre el malvado Armon<sup>2</sup> Almutalib arremete: Pelean como leones, Aunque el traidor se defiende. Quedo hecho dos pedazos, Sin poder nadi valerle. Y como vió la revuelta,3 El que todo la revuelve,

A su gusto ya ençendida, Quisó salirse, y ponerse En salvo de la batalla, Como acostumbrado siempre; Y al tiempo que fué á salir Acertó Hexim á verle, Y saltó sobre el traidor Antes que se le ascondiese : Y asióle de los cabeçones Y le sacudió tan fuerte, Que le aboconó en la tierra, Y él aullando como sierpe, Quando lo cubrió la luz Que Hexim lleva en su frente. Salió Zalma de su tienda Al alarido que tienen, Estropezando en sus haldas. Y como asidos los vee, Dixó: "Señor, da vitoria A Hexim, ayuda á Hexim, Contra su fiero adversario,<sup>5</sup> Ayúdale y favorece." Quando el Axaitan se vió Asido de aquella suerte, Y que ya sus falsas trazas No bastan para asconderse, "Dexame, Hexim, le dice, Hasta dó llegar pretendes? Que muy en vano trabajas, Si piensas darme la muerte; Que no llegan hoy tus fuerzas Ni el Señor te las concede; Que soy de los aquexados<sup>7</sup> Hasta la postrera suerte." Dixó Hexim: "O Axaitan, Traidor, confundido fueses, Quentre los siervos de Allah Tantos daños hechos tienes! Y asi lo dixó, y se fué, Y volvió á mirar su gente; (Y vio el estrago tan grande)<sup>9</sup> Quentre aquellos descreidos Hacian, y de los suyos Ninguno falta ni puede; Llamóles luego y les dixó Que de la matanza cesen,

Quel que urdió la maraña Era el Ebliz ciertamente. Asi paró la pelea, A costa de tantas muertes Que hicieron estos varones, De la Luz muralla fuerte, Quedando muy indignados Estos Judios, de suerte Que duró contra Muhamad Su hinchazon perpetuamente. Omar Ibnu Zaidin¹ Hizó paces al presente,

Y el casamiento acabaron Sin ningun inconviniente; Y en vez de la colacion Quen tal caso partir deben, Hizó repartir Zalma Esplendida y largamente Muchas doblas y adirhames Por la circunstante gente; Y con olores de almizque Cubrió las ropas de Hexim, Y todos con gran contento A Yaciriba se vuelven.

## CANTO TERCERO DE LA QUINTA YSTORIA.

Aquella propia noche invió Hexim á su hermano Almutalib á visitar á Zalma, y con su hermano invio preciosisimas² joias en arras del desposorio, y las recibió ella, y volvió ella otro tanto en satisfacion de aquello y mucho mas, y pasó con Almutalib las palabras³ siguientes:

Advierte, hermano Almutalib, Escucha no me diviertas, Mientras te digo mi historia, De lo4 que te doy larga cuenta. Sabrás que he sido casada Otra vez, á menos desta, Y he tenido otro marido, A quien he sido sujeta; Este se llamó Uchaichate,<sup>5</sup> Tan rico de algos y rentas, Quanto á todos en su tiempo Sobrepujó su nobleza; Tuvó ganados sin cuento,6 Camellos, vacas, ovejas, Datileras, servidores, Grandes campos y dehesas. Tuvó mas este Uchaichate. Con la que está en tu presencia Noventa y nueve mugeres, Todas virgenes y bellas; Y quando casó conmigo Capitulé de manera Que á mi gusto fue medida, Si despues lo mantuviera; Púsele por condicion Que si burlando ó de veras,

El me daba mala vida, Sin ser yo la causa della, Me pudiese quitar del Sin darle razon ni cuenta, Ni él me pudiese impidir El ser de su yugo absuelta. Pero, como pocas veces Lo que el sugeto argumenta Suele salir al compas De lo que su dueño piensa, Salió mi cuenta al revés,7 Como acontece en las cuentas Que se cuentan sin el dueño. Salir de ordinario adversas. Quiso mi suerte que, siendo Su muger, que no debiera, Con muy malas condiciones Trocó su naturaleza; Luego aborreció a mi padre Y á toda mi parentela, Y á mi me tenia oprimida, Como si fuera su sierva. Yo viendo quen duro invierno Se trocó mi primavera, Y en cautiverio mi vida, Siempre mi salud enferma,

Quisé valerme del medio Que ataje siendo donzella: Mas por donde quiere hallaba Con mil candados las puertas; Y viendome tan perdida, Buscaba modo y manera Por donde poder salir Desta esclavitud tan fiera. Pasaba los tristes dias Entre congoxas revuelta, Y las noches sin dormir, Fabricando mil quimeras: Y todas salian en vano, Porque su cierta sospecha Hacia que de ordinario Estaba en mi centinela: Desocupó sus negocios, Todos sus tratos y haziendas. Yen solo guardarme pusó \*Todo su cuidado y veras. \*Sacóme de mi ciudad \*Y de mis deudos ajena, \*Y en un castillo me pusó, Que por mi desdicha hiciera. Aqui me tenia encerrada, Adonde mi edad tan tierna A mas andar consumia Con esta grande estrecheza. Quisó su Bondad divina Que en medio de tantas penas. Pariese un hijo, que fuese Bonanza de mi tormento; No porque su padre hiciese Mejora de vida buena, Qual suelen hacer los padres Que con los hijos se huelgan.1 Antes bien en daño mio Su mal humor siempre aumenta, Y siempre á mi lado estaba, \*Siempre estaba en mi presencia; Y al fin, como es cosa cierta Que aquella parte revienta Que con mas veras le tiran O con mas veras le aprietan, Determiné de poner Remedio, ó morir siquiera,

Dando un tiento á la fortuna Que tanto en mi daño rueda. Despues de haberme acostado Una noche, en ira envuelta, Con mi marido y mi hijo Algo alterada y suspensa, Tomé a mi hijo querido Y atéle un hilo de seda En su pierna delicada Lo que ser pudó de prieta Lloraba el niño inocente, Padeciendo culpa agena; Que á vezes un hijo paga La culpa de quien lo engendra. Su padre muy congoxado, No sabiendo mi cautela. Veló mas de lo ordinario; Y al punto que las tinieblas En medio su curso estaban Afloxé al niño la cuerda Y al punto cesó su lloro, Y él y su padre sujetan Los ojos al dulce sueño; Mas los mios se despiertan. Probé á llamarle dos vezes Por ver si duerme ó si vela: Mas ya no me respondió Que ya la suerte se muestra,2 Pusó treguas á mi daño; Y como vi que sosiega, Dexé de presto la cama, Qual si me abrasara en ella, Y até á mi cuerpo una soga Y por entre dos almenas De la torre del castillo Me dexé caer<sup>3</sup> por ella Por donde medi el espaçio Que habia de alli á la tierra; Y al punto sente las plantas, Qual suele el ave que sueltano Dentre las redes y lazos, Volar con mas ligereza. Volví á casa de mi padre, Adonde estuve resuelta De jamás volver al yugo De Uchaichate, ni volviera

Si contra mi conspirara El mundo y toda su fuerza. Asi, querido Almutalib, Toda esta pasada arenga, Qual de mi boca has oido, A tu hermano se la cuenta, Para que de mis trabajos Todo este discurso entienda, Y mi escarmentada vida Tenga en su poder ynmienda, Y el mal termino de aquel Siempre en su memoria tenga, Y en el trato lo aventaje, Como en la naturaleza Y yo pueda ver trocada Aquella continua guerra, En su poder qual confio,

En paz y amor se convierta." Con esto cesó su historia, Y Almutalib dió la vuelta Adonde estaba su hermano, A quien luego dió sus nuevas, De lo qual quedó admirado; Y en aquella noche mesma Se vieron los dos en uno.2 Y con alegria inmensa Celebraron esta<sup>3</sup> noche. Porque la Suma Grandeza Mudó la luz á Zalma, Que era lo que mas desea; \* Y asi amaneçio preñada Con la luz alta y perfeta Insignia de Varonia De la escogida linea.

## CANTO CUARTO DE LA HISTORIA DE HEXIM. TRATA SU MUERTE Y NACIMIENTO DE JAIBACANAS.

Luego como vidó Hexim Que su esposa ha recebido La luz del santo homenaje, Y el sin ella ha amanecido, Recibió el mayor contento Quen su vida habia tenido; Viendóse con sucesor Del linage preferido; Y para cumplir con ella Lo que le tenia ofrecido Pusó por obra de ir Por las joyas y vestidos; Y primero de partirse, Con amor enternecido Llamóla en lugar secreto, Y desta suerte le dixó: "; O cara y amada esposa! Advierte esto que te digo, Cumpliendo al honor<sup>6</sup> que tengo A tu valor ofrecido. Ese que en tu vientre tienes Es varon santo y bendito;

Yo te lo encargo, qual Edam Lo encargo á todos sus hijos, Y unos á otros hicieron, Todos lo han mantenido, Si a caso siendo yo ausente Parieres,7 sea contigo Como la luz de tus ojos; Mira que tiene enemigos, Mira que los quieren mal Estos traidores Judios; Que los contrarios del padre Lo serán tanbien del hijo. En habiendolo criado, Invialo con sus tios A la antigua y noble Maca, Su patria y antigo nido, Do está su genealogia, Todos sus deudos y amigos, En la casa de su honra En el asiento debido; Mira Zalma que no hagas Otro desto que has oido;

Que á mi me darás contento. Y al Señor harás servicio." Dixó Zalma: "Yo obedezco De voluntad lo que has dicho, Asi como me lo mandas Te ofrezco que sea cumplido, Aunque con tu proceder Me has alterado el sentido; Empero tengo fianza Que volverás sano y vivo." Despues llamó á sus hermanos, Y con un amor crecido Les amonesta y previene, Como si el ultimo aviso Fuera aquel; ques gran prudencia Del hombre ques advertido Prevenir á lo futuro, Qual si lo tuviese visto,1 "O hijos de Abdulmunef, Hermanos, deudos y amigos, Sobre cuyos hombros carga, El prez del culto divino! Ya sabeis como la muerte Es ordinario camino, Que ha de caminar por él El que fue una vez nacido; Y ha de gustar de su acibar El viejo, mancebo y niño, El emperador y el rey, El labrador y el mendigo. A nadie troca la suerte, A ninguno da desvio De quando le llega el punto A su plazo, está medido. Yo he de partir de vosotros, Y no sé si en el camino Ordenará Su bondad De llevarme al otro siglo. Encomiendo-os la hermandad, La concordia y amorio; Socorreos<sup>2</sup> en vuestras cuitas, Al pobre y<sup>3</sup> al afligido; No os dividais unos de otros, Estad todos siempre unidos, Y seréis sobre los reyes

Respetados y tenidos; Y en mi nombre y mi lugar Quiero sea instituido Mi caro hermano Almutalib. Que desta comanda es digno; Y si yo acaso muriere, Rendireisle 4 el señorio De todo mi potentado; Respetalde<sup>5</sup> en nombre mio, Dalde<sup>6</sup> las llaves de Maca. Y del abebrado rio, La camara del consejo, Las llaves de los archivos, Dalde el pendon de Misera Y los zapatos antiguos, Con el arco de Izmael; Y todo aquel poderio Que á mi me dexó mi padre, Haceldo como os lo digo, Y sobre todo os encargo Como de vosotros fio Lo que pariere Zalma, Que será de hecho altivo; Y en teniendo edad cumplida, Todo lo de arriba dicho Le entregaréis, qual yo hago, Que es su derecho ofrecido."8 Todos ansi lo ofrecieron, Sin faltar nada, cumplirlo, Aunque su razonamiento Les dió grande escandalizo; Que siempre los corazones, Con estos tristes avisos. Profetizan de ordinario El daño que está vecino.

Pasadas estas razones,
Ya de todos despidido,
Se sale de Yaciriba
Con un contento creçido;
Gente noble le acompaña,
De los suyos escogidos,
Con gran copia de sirvientes
Que siempre lleva consigo.
Llegó en Axem, y compró
Todo aquello que convino,
Muchas ropas y preseas

Destima y de precio rico. Ya que todo estaba á punto, Puesto en los cofres ó lios Para volver á su tierra. Siendo el dia amanegido, Quisó Su bondad divina Que, por lo que fué servido, Alli se acaben sus dias, Pues ya se engendró en tal signo. Despues de haberse acostado En su cama, fue herido De aquel ultimo acidente Que ha de gustar todo vivo; Y como se vió aquexado Con un dolor excesivo. Mandó llamar á los suyos Quantos con el habian ido, Y dixóles: "Partid luego No estéis aqui detenidos; Que yo soy muerto sin duda, Y mi plazo es ya¹ cumplido; Llevaréis de mi las nuevas. Quel mandamiento divino Se ha de cumplir donde quiera, No hay darle ningun desvio." \*; O como dixó verdad \*Aquel pronostico antiguo, Que se veria apartado El amigo de su amigo! Bien aventurado aquel Quentre hermanos y vezinos En su propria casa muere De todos favoregido. Sus compañas le esforzaban, Aunque muy entristecidos, Porque en estremo le amaban, Que era de todos querido; Y no quisieron partirse, Aunque él los ha persuadido, Hasta ver de su señor El trance difinitivo. Pasó ansi toda la noche. Y al tiempo quel alba vinó, Con voz flaca y congoxosa, Paper<sup>2</sup> y tinta ha pidido; Sobre la cama acostado. Ya todo el vigor perdido,

Con la mano tremolando Esta breve carta ha escrito.

#### CARTA.

A vosotros mis hermanos. Los del linaje escogido, Ynvio la salvacion Entre estas letras que escribo; Sabed que estando yo<sup>3</sup> á punto Para enprender mi camino, Me ha llegado el mandamiento Del Señor engrandecido, Que quiere que comparezca Ante su estrecho juicio, Dando de mano á este mundo Y á sus deleites y vicios; Y pues la muerte y la vida Para juzgarnos la hizó, Aqui y en todo lugar Ha de ser obedecido. Ahi os invio mi hacienda,4 Entre vosotros partildo, Y todas las demas cosas A vuestro honor las remito; Encomiendo os á mis hijas, Como vuestros propios hijos, Y como si vuestras fuesen Les aplicad los maridos. Llevad de mi el azalem A la que en la vida ha sido Candela y luz de mis ojos Regalo y contento mio; Ruego os en amor de Dios, Si nunca lo he merecido, Que de vos sea visitada Mas que si yo fuese vivo; Mirad que tiene en su vientre Mi hijo y vuestro sobrino, En el qual está influida La luz de vuestro apellido. Yo os lo encomiendo, que queda Guerfano sin ser nacido, Y pues no conoció padre Conozca el amor de tios. Sacar-lo-heis de Yaciriba Despues que sea nodrido,

Y llevaldo entre vosotros A su prometido sitio." Y dando azalem sobre ellos, Con un profundo sospiro Cerró la carta y sellóla Con su acostumbrado signo; Y dixó que lo acostasen De todas fuerzas vaçio, Sudando el sudor postrero, Acongoxado y rendido. Alzando al cielo sus ojos, Muy humilde y dolorido, Dixo: "Señor piadad Deste siervo enflaqueçido, Siquiera por el espaçio Que mi frente ha poseido La luz de tu mensagero, El mejor de los nacidos.' Y diciendo estas palabras, Vinó el postrer parasismo Y recibió Azaravel Aquel arroh santo v limpio Amortajaron<sup>2</sup> su cuerpo Los que con el habian ido, Y dieron le sepoltura Como mejor han podido; Y luego marcharon todos Con las requas y cautivos Caminando á grande priesa Tan tristes y desabridos. Ya Zalma con su conpaña A recebir ha salido La cabalgada de Hexim, Largo trecho en el camino, Quando la compaña triste Asomó por los exidos; Rasgaban³ todas sus ropas, Sus rostros todos hendidos; Todos venian Horando, Dando grandes alaridos, Que los montes retronaban4 Con un eco entristecido; Azemilas y camellos Mostraban sentir lo mismo. Trasquilados los copetes Las clines, colas y ozicos;5

Y para causar mas duele, Cada azémila un vestido Traia de los de Hexim Sobre la carga tendido. Y ellos, que venian gritando Dando vozes y gemidos, Repitiendo á cada paso El nombre de su caudillo. ¿Quien podrá contar en breve Los duelos, llantos y gritos De los que aguardando estaban, Quando vieron tal prodigio? Por qué termino dirémos El sentimiento excesivo De la que su esposo aguarda Por momentos tan medidos, Con tanto apercebimiento De contento y regocijo, Con tantas mesas tendidas De manjares escojidos, Con tantos honrrados deudos \*Para honrar á su marido? Y habia de ser en obsequias Todo el placer convertido. Ques bien quen la muerte se honre Quien fue tan honrado vivo. Tantos estremos hacia. Sentada en el suelo frio, La triste Zalma, que causa Dolor y espanto en decillo: Hiere con golpes su cara, Su hermoso rostro hendido, Haciendo de su persona Un lastimoso martirio; Decia á voces: "O Hexim, O señor, o caro amigo, O luz de quien te adoraba! ¿Dó quedas dulce bien mio? Con ti murió mi alegria, Desta quen tus manos pusó El ser que tenia influido. Falto la luz de las vegas En faltarles tu apellido. Y á mi me faltó el consuelo, Mi confianza y abrigo. ¿Quien será á tu amada esposa

ART. VI.—Essay on the Creed and Customs of the Jangams. By Charles P. Brown.

The various Brahmanical creeds prevailing among those Hindus who worship Vishnu and Siva have been amply illustrated by Colebrooke and other eminent scholars. When I was in England in 1836 the learned H. H. Wilson desired me to ascertain and describe the peculiarities of the Jangams or anti-brahmanical worshippers of Siva, whom he had but slightly noticed in his Essay on Sects, in the seventeenth volume of the Asiatic Researches.

There are brief notices regarding this sect in the Italian travels of Della Valle, (chap. xxi. Letter 5, of Nov. 1623) also in Buchanan Hamilton's description of the Mysore, written in 1800, in Colonel Wilks's Mysore, and in the Abbé Dubois. These merely record the stories told by their enemies the Vaishnava brahmans. But wishing to learn their own tale I applied to the religionists themselves and shall record their statements.

Originally the Hindus in Southern India were partly Jainas, but some worshipped Siva, and a larger number adored the petty village goddesses, who are honoured even to the present day by Sûdras and Pariars.

The Vaishnava religion was introduced in Southern India about the time when the first crusade in Europe began. A Jaina râjâ embraced it, between the years eleven hundred ten and eleven hundred twenty of the Christian era, changing his name from Betteda Raya to Vishnu Vardhana. The Jangam religion began soon after about the year eleven hundred and sixty.

It was instituted by Basava, the son of a Saivite brahman, a native of Bagwari in Belgaum, in the Southern Marata country. When he was a boy (the legends state) he refused

1120

to wear the brahmanical thread; because the rites that confer this mark of initiation require the adoration of the sun, in the manner prescribed in the Vedas. He then fled to Kalyanam, near Banavasi, in the Sûnda country, where the reigning râjâ was Bijjala or Vizzala, a Jaina by creed, whose minister, a brahman, was Basava's maternal uncle and bestowed on him his daughter in marriage. On his decease Basava succeeded him as minister.

His father being a Saivite was a worshipper of the Lingam, the most ancient idol known among the Hindus: and which may be seen (a large block of marble) in the market-place of most Hindu villages. This symbol is as separate from indecency in the Hindu mind as circumcision is in the Musulman mind. The huge marble image (Sthâvara lingam) is viewed with dread, and to move it is a crime. Drawings of it may be seen in Buchanan Hamilton's Eastern India, (which Montgomery Martin published as if he himself were the author) in Moor's Pantheon and Coleman's volume: and there are several images in the British Museum, at the India House and elsewhere. To shew his scorn of superstition Basava made images the size of an acorn, and distributed such to his followers, both men and women,

'Hanging a golden stamp about their necks Put on with holy prayers.' (Macbeth iv. 3.)

And this he called "Jangama lingam" as being peripatetic. He called himself and his followers Linga-jangams (not Jangama) or Lingavants: some call them Lingayats.

The adventures of Basava, and his death in A.D. 1168 (coeval with that of Thomas-à-Becket) are narrated in the Basava Purân: of which I many years ago printed an abridgment in English.

The learned Richard Payne Knight wrote an elaborate enquiry into the Symbolical language of ancient Art and Mythology: reprinted by an accomplished scholar Mr. H. Barker, in 1836. It is a pity a system so very ingenious should be utterly unknown to learned Hindus.

In reading their books written in Kannadi and Telugu

metre, I soon perceived why the Lingavants are abhorred by those who worship Vishnu and Siva.

The Brahmanical creed teaches the worship of the sun and fire; of many gods and goddesses: the system of castes: the doctrine of transmigration; the divine origin of Brahmans: their holiness: the terror of their curse; penances, pilgrimages, the sanctity of particular places: the inferiority of the female sex; the laws of consanguinity; the use of holy water; the entire system of feasts and fasts, purity and impurity: of omens; of lucky and unlucky days; the vast importance of funereal ceremonies.

Basava rejected all these as useless delusions: he declared that all holiness consisted in three things "Guru, Linga, Jangam"—that is The Guide, the image, and the fellow-religionist.

The Guide or Confessor may be any man or woman who is in the creed: who whispers the sacred (mantram) spell in the ear of the Jangam or worshipper: and hangs the image on the neck, or binds it on the arm. A guru is forbidden to eat flesh, to chew betel, or touch liquor.

Marriage is held in high honour by orthodox Hindus. But in the South-west provinces the rite is merely nominal: and the woman is always free to take up with any man as soon as she is married—except her husband. This pernicious fashion has been imitated by the Jangams, who began in that neighbourhood: they did this as an open defiance of Brahmanical tenets.

Basava being by birth a Brahman had many friends and followers of that caste: who are called Ârâdhya, meaning, Reverend. But these would not give up caste, and eat with Pariars. And they continued to wear the sacred thread laid on the shoulder, with the spell called Gâyatrî. He admitted them as half converts: and they certainly are scorned by other Jangams as being neither one thing nor the other. Yet in the Prabhu Linga Lîlâ (chap. 1.) Basava is characterized as an Ârâdhya. No idolatrous creed is free from discrepancies.

The brahmanical funerals being performed with fire,

Basava ordered that burial should be used: very probably imitating the Jews or the Musulmans. And the widows formerly were burnt alive: he allowed them to be buried alive: in either case all Hindus consider the woman a free agent, a voluntary suicide: such a death is always held in honour.

Basava went further, and made an innovation shocking to all Hindus: for he permitted widows to marry again.

Their literature consists of less than half a dozen volumes: written in Kannadi, and translated into Telugu, Tamil and Marata. The oldest is the Basava Purân, containing about a hundred tales of their gurus, or saints: many stories are miraculous and several are comic parodies on legends in the Bhagavat or Râmâyan. The language is rather antique: it dates perhaps from A.D. 1400.

The Chenna Basava Purân is a modernized comic version or imitation of this book.

Also the Pandit Ârâdhya Charitra, a voluminous but illiterate record which is their Golden Legend and is very dry reading. There are other smaller poems.

These books are chiefly read for amusement. In these anecdotes the brahmanical god Siva is often introduced, not as an object of reverence, but as a humble mean servant of the various "Bhacts" or Saints who work miracles; usually of a comic description. But there is nothing indecent or obscene.

Some of the anecdotes are parodies of legends held in reverence by brahmans.

The Prabhu Linga Lîlâ is the most pleasing of these volumes: in which the female sex is treated with respectful delicacy. This book describes the adventures of Allama who is represented as an incarnation of the deity. He becomes visible at the wish of Siva, in Kailâsa or Olympus. There is no tale of his birth, death, or final disappearance. On one occasion he appears as Anteros, the Amoricide, or Slayer of Lust: and the goddess Mâyâ (or Delusion) is enamoured of his beauty. Then he disappears and visits a 'bhact' or devotee in a distant town: again vanishes and visits another: he assumes no pomp, has no followers, and manifests no power.

Basava is a ruler, a warrior, a king's minister, the head of a family, fervent in his vows to nourish Jangams and to vanquish Jainas. But Allama is marked with peace, benignity, humility, and gentleness: he is perpetually sued by various female saints but remains unmarried: he has disciples, but no relations. He has an invulnerable body.

Precisely in this style do Musulman authors write regarding our Lord: and this may account for a Hindu poet's description of Allama: a character so strongly opposed to human nature as seen among Hindus. The Jangam authors strive in vain to account for the name; but it has occurred to me that Basava took it from 'A-la-ma' three mysterious syllables which commence the second sura of the Koran. See the Mishcat-ul-Musâbih, Book viii. cap. 1, part 2, on Alif, Lâm, Mîm.

Originating in the South-west of India, in the Kannadi country (which we call Carnatic), the Jangams are widely spread through the Dakhan, the Marata and Gujarati country, also among the Malayalas, Tamils and Telugus. At my request a Jangam poet wrote a Telugu metrical version of the Gospel of St. Luke which has been printed. But a German missionary informs me that he found the Jangams too proud to embrace Christianity: some few appeared willing to be baptized, but soon desisted, on finding that it would not suit the Epicurean liberty which they prize.

It remains to speak of "The Four Ârâdhyas," personages of great importance in the creed. These are named Revan Ârâdhya, Marut Ârâdhya, Ekorâma Ârâdhya, and Pandit Ârâdhya. These four appeared in four successive ages, as precursors of Basava. Among Jangams and Ârâdhyas, at all their celebrations of marriage, birth, initiation, or funerals, four vases of water are solemnly set up in honour of these four: who seem to be like the "Four Prophets" (pîr) of the Musulmans, described in p. 287 of the Customs of Musul-

¹ Compare Dens, Theologia Moralis vii. 327 de dotibus corporis gloriosi. And compare the character of Siegfried of the Niebelungen Lied. In Wilson's Essay on Religious Sects of Hindus, article "Yogis" in a note he gives a genealogy of the Nathas: the 8th is Goraksha: the 25th is Allama and the 26th is Prabhu Deva.

mans, published by Dr. Herklots: or like the 'heft tan,' the 'seven bodies' buried at Shiraz: who are much reverenced. In one point all these saints are alike: that nothing whatever is known about them.

The Jangams have not always adhered to the rules given by Basava. For, like other Hindus they celebrate the Sivarâtri feast which Tod, in his Râjasthân, has so fully described. And they imitate their neighbours in making pilgrimages to Srî Sailam, Kâlahasti, and some other sacred places. I could easily have added many other particulars, but they might not seem worth perusal. Those who converse with Vaishnava brahmans will hear very rough language regarding the Jangams: but having been acquainted with both parties, and having written a translation of the Lîlâ, I consider them quite as good as other Hindus: and the English who have occasion to study Telugu or Kannadi will find agreeable and profitable reading in the volumes written in verse by the Jangams.

# Art. VII.—On Malabar, Coromandel, Quilon, etc. By C. P. Brown.

The Arabs and Africans who first visited the west coast of India, came "Mu-abbar": "from beyond" the sea. In the voyages of Ibn Batuta, translated by Dr. Lee, the country is called Muabbar, without any surmise that this is Malabar. The Syrian Christians who live in Travancore wrote the word in Syriac characters in Syriac characters, and it has occurred to me that in careless writing this may have been altered into Malabar: a name unknown to the inhabitants; who fancy it is the European name for their country and language. The Eastern shore of India also was visited by men "from over the sea:" and the name Malabar has also been wrongly applied to the Eastern coast.

But the name underwent another change. The Tamils in those lands could not pronounce the  $\xi$  ain, or the letter B, and Muabbar was softened into 'Mâpila' the name borne by these descendants of Africans: who are now called Moplas.

The children borne to these foreigners by Hindu women were in Hindî called "Do-bhashi," or "two-languaged;" hence Dobhash, or Dubhash, an interpreter: bilingues is the phrase used by Virgil. This word also was hard to the Tamils, who could pronounce neither D nor Bh. They changed the word (such is my opinion) into To Pâsi and hence the name Topass; which was applied afterwards to such persons of the mixed blood.

The name Maabar is correctly explained in Wright's edition of the English version of Marco Polo's Voyages, (in Bohn's Library, 12mo. p. 395): but in a learned essay translated from Arabic, in Prinsep's Journal of the Asiatic Society (Aug. 1836, p. 458) the coast is called مونيار Mônîbâr: which is

there misprinted Monembar. The Arabs also called this country بدائفانل Bilid ul Falfal, 'the land of pepper' (see Sir Wm. Jones's Description of India, chap. iii. which is in his Works xii. 387). The Hindus call the western rêvu, or coast 'Korchi Rêvu,' which we call Cochin: while 'Calicut' is properly Kallee Kôṭa; Aulay-polay has been corrupted into Alleppie; and Kollam is modernized into Quilon.

A mile or two north of Madras-town there is a fishing village called Kuru manil क्रमान् or 'Black sand;' the earliest Portuguese sailors pronounced this Coromandel, and called the whole coast by this name: which is unknown to the Hindus. At a later day 'Shozha Mandal' has been assigned, denoting 'the land of the grain called maize:' but that grain is peculiar to no district. Some have proposed the etymon 'Kuru-Mandal,' but the Kuru race were in the north not the south of India.

ART. VIII.—On the Treatment of the Nexus in the Neo-Âryan Languages of India. By John Beames, B.C.S.

Read February 21, 1870.

In the following remarks the term "nexus" is employed to denote a conjunction of two or more consonants in one word without the intervention of a vowel, as kt, dhy, rn, etc.

I divide the neo-Âryan languages of India into two classes. The Prâkrits and Pâli are called the "languages of the first period;" Hindî, Bengâlî, Ûriyâ, Panjâbî, Marâṭhî, Sindhî, Gujarâtî, are the "languages of the second period."

In assuming that the languages of the first period are later than Sanskrit, I do not lose sight of the fact that historically they were contemporaneous with it. But I call them "neo-Âryan," because the majority of their forms exhibit a decadence from some more perfect condition. It is true that not only in classical, but even in Vedic, Sanskrit forms are found which exhibit a perfect Prâkrit type; but this does not prevent the general run of Prâkrit from showing unmistakable signs of having degenerated from a purer and stronger ancient language, which we cannot call Sanskrit, because it is older still than even the language of the Vedas, and which therefore may, when necessary, be called "Old Âryan."

It is a highly probable theory that the Old Âryan, like all other languages, began to be modified in the mouths of the people as early as the Vedic period, and that the Brahmans, at a subsequent date, in order to prevent the further

<sup>&</sup>lt;sup>1</sup> Es kann aber die Sprache wiederum, je höher ins Alterthum aufgestiegen wird, als Dialect oder gar Mundart einer früheren, weiter zurückliegenden erscheinen. Grimm, Gesch. d. Deutschen Sprache, p. 574 [827].

degeneration of their language, polished, elaborated, and stiffened it into the classical Sanskrit. We cannot, however, suppose that they brought any new material into the language, but simply that they reduced to rule what was till then vague and irregular, that they extended to the whole of the language euphonic laws which had been till then only of partial application, and so forth; all the while, however, only working upon already existing materials. It will, therefore, not militate against the established contemporaneous existence of learned Sanskrit and popular Prâkrit, to consider the former as in general the representative of the original Old Aryan, and, consequently, as so far older than the Prâkrit; because, ex hypothesi, in Sanskrit most of what existed in Old Aryan has not only been preserved, but worked up and expanded, while in Prâkrit, on the contrary, not only has much been absolutely lost, but that which remains has been corrupted and debased. Besides, as nothing whatever of the Old Aryan has been preserved, or is likely to be discovered (although much may be, and has been, guessed at from analogy), we are driven, whether we like it or no, to look to Sanskrit for the oldest extant forms; and we do, undoubtedly, find them there, as contrasted with Prâkrit and Pâli. In the following remarks, therefore, which make no pretence to rise to the level of the higher philology, I take Sanskrit as my starting-point, and place the Prâkrits and Pâli on the first downward step, or, in other words, in the first period of Neo-Arvanism.

With regard to the languages of the second period, it must be explained that I do not intend to touch on the obscure question of how far non-Âryan elements enter into their composition. Much there is which is still doubtful, but this is admitted on all hands, that a very large proportion of their constituent parts is of Âryan origin, and to that the present notes will be confined.

It has been customary with some writers to derive all the Âryan words of the languages of this period from the Sanskrit through Prâkrit; but on a closer survey, I think it will be seen that this idea is erroneous.

The languages of the first period have been studied, and the laws of their formation analyzed, and written down. Knowing this much, therefore, we can see that in the second period there are two grand classes of words, one of which has evidently been derived through the medium of Prâkrit, the other not. It often happens that a Sanskrit word, for instance, re-appears in Hindi under two forms, one of which shows signs of having been in existence in the Prâkrit period; while the other, by retaining consonants which have been lost in Prakrit, shows that it cannot have reached its present position through that language. general example, the word ne "a house," may be given. This word in the first period becomes गिह and गेह, with total loss of the cerebral semi-vowel. In the second period, however, the word appears as गृह and यह.¹ The र could not here re-appear unless recourse had been had to the ancient Sanskrit fountains; and this opens the way to a theory which will account for the occurrence in the second period of words far better preserved than they are in the first. I conjecture that in the revival of Brahmanism which followed the expulsion from India of the Buddhists, efforts were made by the Brahmins to re-establish in the mouth of the people, in their pure Sanskrit form, words which they had long been familiar with in their corrupted Prâkrit shape. It would be thought advisable to discountenance the use of words deeply impregnated with Buddhistic associations, the more so as Buddha had made the vernacular of his native province into a sacred language in opposition to Sanskrit. This practise of resuscitating words having once begun, has lasted down to our own times.

We find, therefore, three classes of words in the languages of the second period,—

First,—Words which existed in Prakrit, and passed from and through it into the modern languages.

¹ Chand. Prithir. 23.20. One MS. reads गृह; another ग्रह; the whole passage is आयो चैत सुहासनी। गृह गृह भयी अनन्द ॥ "Pleasant thoughts came—in every house was joy."

Second,—Words which have not passed through Prâkrit processes at all, but came direct from Sanskrit, at the commencement of the second period.

Third,—Words imported at later dates from Sanskrit, chiefly by pedants, and which have therefore an artificial

character and appearance.

In an investigation like this, which is still in its infancy, it would be, however, premature to lay down absolutely a date for the origin of the second period. We hold two ends of a chain, the centre of which is hid from us. have at one end Sanskrit, the Prakrits, and Pali, all languages of an inflectional character; by degrees we lose sight of them and several centuries of absolute darkness follow, and when light dawns again we find a mass of local tongues all more or less analytical in their type. When or how the change took place we cannot find out from any literary monuments. A long and patient inquiry may, however, hope at length to bridge over the chasm. first step in such an inquiry is the analysis of the forms of stem words; that of grammatical forms is the second. The treatment of the nexus affords the most solid and important results to begin with; and it is to this point that I wish to contribute a few observations.

Three kinds of nexus may be distinguished in Sanskrit.

- I. The strong nexus, i.e. the combination of two or more strong letters, e.g. কুলা, ম্নি, ম্নন্, ম্লে.
- II. The mixed nexus, i.e. the combination of a strong with a weak letter, e.g. माचा, वाष्प, विद्शत, वाघ्र.
- III. The weak nexus, i.e. the combination of two or more weak letters, e.g. जन्मन, गृह्य, त्राह्मण, ग्रन्थ.

The strong letters, it should be understood, are the letters of each of the five vargas, with the exception of the nasals; the weak letters are all the rest, viz., nasals, sibilants, semi-vowels, and the aspirate  $\Xi$ .

These three kinds of nexus differ from each other in their method of treatment, in both periods, in the manner

which I now proceed to show.

# § I.—THE STRONG NEXUS.

## A. IN THE FIRST PERIOD.

The treatment of the strong nexus is uniform and invariable throughout the first period. The rule, though variously stated by different writers, from Vararuchi downwards, is substantially the same; to wit, that the first member of the nexus is assimilated to the second: e.g.  $\pi$  kt becomes  $\pi$  tt.\(^1\) The strong nexus is of rarer occurrence than the others, because it is limited by the euphonic laws of Sanskrit, which prohibit the combination of a media with a tenuis, or the placing of an aspirated letter as the first member in the composition.

Vararuchi in his third chapter gives a string of rules, arranged without much reference to the character of the nexus, but from which the following general view may be deduced:—

न, न, इ, त, इ, प, are elided before another consonant and the second letter is doubled. This is rather a roundabout way of putting it, and he omits all mention of च, ज, z, and च. In Prâkrit च is identical with च, and the rules given for च therefore apply; च in iii. 3 is elided (or, as we should say, assimilated), whether it be the former or latter member of a nexus, and च consequently does the same; thus, Skr. जुड्या lubdhaka = Pr. जाड्या loddhao, and Skr. पञ्च pakwa = Pr. पिञ्च pikkam; Skr. जुड्या lubdha = Pr. जुड़ी lubdho.—Var. iii. 51.

As to z it so seldom occurs as the first member of a nexus (except in combinations where चच् "six," constr. च्य forms the first element), that Vararuchi probably thought it useless to mention it. Similarly I am not aware of any cases where the palatals form the first member of a nexus. By Sandhi they would migrate into gutturals in composi-

 $<sup>^1</sup>$  In virtue of this rule, we find in Prâkrit that when the second member of a nexus is an aspirate, the first member is changed into the homogeneous lenis; thus, क्य  $kth = \overline{cu}$  tth, not  $\overline{u}$ , which would be an impossible nexus.

tion; e.g. लच् twach + दोषिन् doshin = लग्दोषिन् twagdoshin, वाच våch + च ya = वाच्च våkya. So that probably no instances exist of palatals as initials in a nexus. Vararuchi's examples are: भक्त = भक्तं, सिक्थक = सित्यक्रो, मुग्ध = मुद्दी, सिग्ध = सिण्डिो, खडू = खग्गो, षडू = सज्जो, उप्तल = उप्पलं, etc.

Lassen, p. 239, repeats Vararuchi for the most part, but shows some consciousness of the difference between a strong and a weak nexus. He gives (p. 235) five classes of nexus, among which is No. II., "Complexus consonantium quaternarum ordinatarum," which corresponds to my "strong nexus." His list of examples is different from Vararuchi's, but does not add anything to the general rule

already obtained from the Indian author.

Hoefer, de dialecto Prakritâ, p. 90, § 73 b, gives a list of words in which the Sanskrit form of the nexus is retained in Prâkrit, but this list has no value, as it rests upon incorrect readings. The principal instance is **utagu** in Vikramorvaşi, 110, 2 (edition Calcutta), which Lassen concludes to have arisen "ob negligentiam editorum," or, perhaps, rather from the proclivity of the scribe towards Sanskrit forms, a fertile source of bad readings in the plays. We should undoubtedly read **utage**. Hoefer's work does not appear to be one of much value.

If now we turn to Pâli and the Prâkrit of the Jain writings, we find the same principle carried out. Instances from the Dhammapadam and Bhagavatî (ed. Weber) are, पृथानने = पृथुक्तिणे, चर्त्र = णत्तं, पृद्वनं = पृग्गनं (or in Bhâg. पोग्गनं), सप्तन् = सत्त, सप्तपष्टि = सत्तिट्ट, खुव्य = कुक्त (कुक्त is

probably for कुभ्ज, hence the aspirate)..

Pâli seems to have the best claim to be considered as pure Mâgadhî, and in the Mahawanso, one of the chief works in that language, we find the same rule, e.g. वक्तवं = वक्तबं, प्राप्त = प्त, युक्त = युक्त. Numerous instances may be

<sup>&</sup>lt;sup>1</sup> Vide Weber. Ueber ein fragment der Bhagavatî, aus d. Abh, d. k. A. d. W. Berlin, 1. Theil, p. 405.

collected from every page of the Mahawanso, or any other Pâli work. The rule is apparently absolute and without exception, so much so, that any deviations from it may at once be set down as errors of copyists.

There seems to be no good ground for supposing that the last member of a strong nexus is ever assimilated to the first. The examples given by Hoefer rest chiefly on incorrect readings, as shown by Lassen.

### B. IN THE SECOND PERIOD.

We have here to deal with a mass of forms in seven different languages, and the attempt to find a law for the changes observed is attended with much difficulty.

It will therefore tend to remove all doubt as to the truth or rather accuracy of my assertions to give as large a number as possible of examples of strong nexus which occur in Sanskrit, with their modifications in the languages of the second period; commencing with the numeral "seven," which is from its nature of universal employment.

सप्तन saptan (oxytone), "seven." Pr. सत्तो. H. सात्. M. and G. सात. B. and U. सात (pronounced "shâto"). S. सत. P. सत्त. B. U. and M. also, pedantice सप्त.

सप्तम saptama (oxytone), "seventh." Pr. सत्तमो. H. 1st सतं (Chand. Prith. 1, 5), 2nd सातमो (Braj), 3rd सातवां m. वी f. (modern). M. same as H. 3rd. G. सातमो—

<sup>&</sup>lt;sup>1</sup> But see Bopp, Vgl. Acc. System, p. 45, § 29, the modern languages appear to have treated it as oxytone.

<sup>&</sup>lt;sup>2</sup> Skr. stands for Sanskrit, Pr. Pråkrit, H. Hindî, M. Maråthî, G. Gujarâtî, P. Panjâbî, B. Bengâlî, S. Sindhî, U. Ûriyâ. I have written all the words in the Devanâgarî character, because of the difficulty of getting appropriate type for some of the languages, as Ûriyâ and Panjâbî, and because the use of one type facilitates comparison.

मी-मुं. S. सतों-तों. P. सत्तवां-वों. B. and V. सप्तम (shoptomo).

सप्तर्भन् saptadasan (accent on first syll.), "seventeen." Pr. सत्तरस. H. सबह (satraha), modern सत्रह (satarah). M. सवा or सत्रा. G. भृतर. S. सबँह. P. सतारां, in which it stands quite alone. B. सत्र shoter. U. सत्र shotoro.

सप्तदशः saptadasah (id.), "seventeenth." H. सचहवां or सत-रहवां—वीं. M. सचावां—वीं—वें. G. श्रतरमो—मी—मुं. S. सचहों. P. सताईवां and oमां. B. and U. सप्तदश or B. सतेर (same as the number for 17).

सप्तित saptati (oxyt.), "seventy." Pr. सत्ति, सत्तरि, हत्तरि.
H. सत्तरि (Braj) सत्तर् (mod.). M. सत्तर. G. सीतेर्.
S. सतरि. P. सत्तर्. B. सत्तर. U. सत्तीरि, in which it stands alone (M. B. and U. also indulge in their favourite pedantry by using सप्ति occasionally).

सप्ततितमः saptatitamah (oxyt.), "seventieth." H. सत्तर्वां—वीं . M. and P. id. G. सीतेमी—मी—मुं. S. सतर्थों (sataryo). B. and U. the Skr. form.

It is next necessary to observe the curious modifications which the word for "seventy" undergoes when it occurs as the last member of a compound word.

Sans. र्कसप्ति: ekasaptatih. Hindî,71, दकहत्तर ik+hattar.

Mar. 71, एकाहत्तर् ekâ+hattar.

Guj. 71, इकोतेर् ik+oter.

Sind. 71, एकहतरि eka+hatari.

Panj. 71, इक्हत्तर् ik+hattar.

Beng. 71, एकात्तर् ek+ûttar. Ûriyâ, 71, एकस्तोरि eka-stőri. "Seventy-one."

72. बहत्तर bahattar, and so on.

72. बाहत्तर् bahattar, etc.

72. बोहोतेर bohoter, etc.

72. बोहतरि bbohatari, etc.

72. बहत्तर् bahattar, etc.

72. बाहात्तर् bāhāttar, etc.

72. बास्तोरि båstori, etc.

Also the still greater transformations of "seven," when it is the first member of a compound, e.g.,

"Twenty-seven."

Sans. सप्तविश्वात: saptavinsati.

Hindî, सताईस satû+îs.

Mar. मनावीस sattā-vis.

Guj. शतावीस śatá-vis.

Sind. सतावोह satá-víh.

Panj. सताई satű-í.

Beng. साताईश्रा sata-18.

Ûriyâ, सताईश satû-îśo (shotaisho).

"Thirty-seven."

सप्तिचित्रत saptatrinsat.

सैंतीस sain+tis.

सततीस sata-tis.

सादतीस såd-tis.

सतरीह satatih.

सैंची sain-trí.

साईचीश sain-tris.

संदतिरिश sanitiriso.

"Forty-seven."

S.सप्तचलारिंग्रत saptachatwarinsat

H. सैताजीस sain+tülis.

M. सत्तेचानीस satte-châlis.

G. सूडतालीस súd-talis.

Si. सतेतालीह sate-talih.

P. संताची sant-all.

B. सात्चाबीश satchalis.

U. सत्चालिश satchaliso.

" Fifty-seven."

सप्तपंचाश्रत् sapta panchásat.

सतावन satú-wan.

सत्तावन sattû-vanna.

सतावन satá-wan.

सलंजाह satwa-njah.

सतवंजा sata-vanjā.

सातान sátánno.

सतावन satávano.

"Sixty-seven."

S. समब्धि: saptashashtih.

सर्संड sarsath.

"` सतसठ satsath.

M. सत्सष्ट satsasht.

G. सडसेंड sad seth.

Si. सत्हिंड sat hathi.

P. सताहर satá haț.

B. सात्षाट्टि sütshüţţi.

U. सत्षिठि satshați.

" Seventy-seven."

सप्तसप्तिः saptasaptatih.

सत्हत्तर् sat-hattar.

सत्याहत्तर् satya-hattar.

सीतोतेर stoter.

सत्हतरि sathatari.

सतत्तर् satattar.

सातात्तर् satattar.

सतसोरि satastori.

<sup>&</sup>lt;sup>1</sup> Bengâlis and Ûriyâs pronounce the ₹ as sh, so that shâtâis would be perhaps a better transliteration, and so throughout the series.

"Eighty-seven."

S. सप्ताशीति: saptásítih.

H. सतासी sat-ast.

M. सत्यांयशी satyányshí.

G. सतासी satúsí.

Si. सतासी satúsí.

P. सतासी satásí.

B. साताशी satast.

U. सताशी satásí.

Ninety-seven."

सप्तनवतिः saptanavatih.

सतानवे satā-nave.

सत्यास्वि satyú-nnave.

सतांण satûn-nû.

सतानवे satánave.

सतावनं satūnavem.

सातानबर्दे sütünavvaî.

सतानीइ satûnoï.

I have given all these numerals in full detail, because they exhibit such a surprising amount of variation from the original stem মসন.

Some other common words in which a strong nexus

occurs are as follows:

- खड़ khadga, "a sword." Pr. खागी, Var. iii. l. H. lst, धागी Chand. Prith. 15, 24. खागी पाग डिंड हथ्य तें "He attacked, raising sword in hand;" 2nd, खाग (but only used for the horn of the rhinoceros, for which also खड़ा is used); 3rd, खड़ा (kharag); 4th, खांड (khánd). M. lst, खड़ा (rare); 2nd, खंडा; 3rd, खांडां. P. and U. deest. S. खनी. G. खांडुं. B. खडा (khŏdŏg).
- मुद्ग mudga, a sort of pulse<sup>3</sup> (Phaseolus mungo). Pr. मुरगो, Var. ib. H. मूंग. M. मूग (pedanticè also मुद्ग but rare). S. मुङ्ग (mungu). U. मूग (mugo). G. deest. P. मुंग or मुरग्. B. मुग (mugo).
- दुग्ध dugdha, "milk." Pr. दुझ. H. दूध. M. and G. दूध (ped. दुग्ध). U. दुध. P. दुइ. S. ङोधि. B. दुध, दुर्, दुद्, and दुग्ध (ped.).

<sup>&</sup>lt;sup>1</sup> ष is always written for ख in the two MSS. of the Prithirâjarâsa, which I have seen so also in Bengâlî.

<sup>&</sup>lt;sup>2</sup> Cf. ऋएड, S. ञानी "egg."

<sup>&</sup>lt;sup>3</sup> Erroneously in all the dictionaries as a kidney-bean, which it in no way resembles; it is a sort of millet.

- मुद्रर mudgara, "hammer." Pr. मुगग्रो. This word is used in two senses in the second period. (a) = an athlete's club for exercising the muscles. H. मुग्दर (मुग्दर). M. मुद्रगल्. S. deest. G. मग्दल. U. and B. मुग्दर and मुद्रर. P. मुगदर (b) = a washerman's mallet for beating clothes. H. मूगरा and मोगरा. M. मोगर प्रा and प्री. S. मुख्रिरो. G. मोगर and प्री. U. deest. B. deest.
- ग्रब्द çabda, "a word." Pr. सही. H. सबद and ग्रब्द. M. S. G. and B. ग्रब्द (not very frequent, except in B.). P. deest. U. ग्रबद (çŏbŏdŏ).
- कुञ्ज kubja, "crookbacked." Pr. खुञ्जो and खुञ्चो. H. 1st, कुञ्जा; 2nd, कुञ्जा; 3rd, कुञ्जा (kubrá, commonest form). M. कुञ्जा (in the Wâri dialect, खुञ्ज). G. कुञ्जो (both in M. and G. खुञ्जा is "the snail," i.e. humpback). S. कुञ्जो. P. कुञ्जा and कूञा. U. कूञा. B. कुञ, कुञ, कुञ, and कुञ्ज.
- मुग्ध mugdha, "foolish." Pr. मुज्ञो. सुग्ध occurs in M. and B., but in the others the form in use is सूढ, from the Skr. सूढ, which is the other form of the p. part. of सुइ.
- भक्तं bhaktam, "boiled rice." Pr. भत्तो. H. भात्. M. and G. id. S. भतु. B. and U. भात (bhátŏ). P. deest.

The class of words containing the nexus  $\overline{n}$  kt is rather numerous, but does not present many interesting features; a few examples follow:

- भक्त bhakta, "a devotee." Pr. भक्ती. H. M. and B. भगत् and भक्त. G. भगत. S. भगत. P. भगत्.
- मृत्ता muktá, "a pearl." Pr. मृत्ता. H. मोती. M. मोती. G. मोती. B. and U. मोति. B. also मृत्ता, मौतिता, and मति. S. मोती. P. id.
- रता rakta, "red." Pr. रता. H. राता. M. id., when it

means "red," but एक when meaning "blood." S.एतो. G. एातु. P. deest. U. and B. एक in both senses.

The Sanskrit words श्राति, यति, पति, मति, मुति, पड्सि occur in their original forms in nearly all the languages, but with slight modifications in some. They do not, however, offer much that is noteworthy.

From the examples collected above certain laws may be deduced, keeping in mind the distinction already drawn between words which show traces of Prâkrit influence

(class 1), and those which do not (class 2).

Hindî, in class 1, rejects the first of the two consonants of Prâkrit, and as a compensation lengthens the preceding vowel, e.g. सात, खाग, मूग, दूध, मोगर्, भात, from सत्तो, खागो, मुगो, etc. At the same time the final short ă is cut off in nearly every instance in substantives, but not, as a rule, in adjectives.

In class 2 the compound consonant of Sanskrit is split up by the insertion of a short ă, e.g. অনুন kharag, মনহ sabad, মনন bhagat, for অনু khadga, মনহ çabda, মন bhakta. In the case of আৰ khand, the last member of the nexus has been rejected, and the vowel lengthened, as in class I, but this is merely an exception. In নুবুৱা also the last member has disappeared, but in place of the customary compensative lengthening of the vowel we have the well-known Hindî familiar or diminutive particle হা added, so that we may assume the existence of an intermediate form নুবা, which, however, is only found in Panjâbî.

The series of "seven" and its derivatives belongs to

<sup>&</sup>lt;sup>1</sup> In the case of adjectives the neuter in am appears to have been accepted as the basis of the modern system, just as in the Romance languages the Latin neuter in um has been selected, and results in a termination o. (That this o came from um, and not from the masculine us, is proved by the existence in the earlier stages of the Romance languages of a separate masculine nominative in s, e.g. mals for malus.) The neuter am of Sanskrit modulates in the first instance into o, and in this stage Marâțhî, Sindhî, and Gujarâtî still have it, but in Hindî it has further migrated into d.

class 1, in so far as it has everywhere lost its first member  $\eta$ . This is only natural; a numeral being, next to a pronoun, the most commonly used description of word, and hence not to be changed by authoritative interference, such as I have assumed in the case of class 2.

The variations may be thus analyzed:

सत्त॰ satta-, in the words 70, 70th. सात॰ sât-, in the words, 7, 7th. सता॰ satâ-, in the words 27, 57, 87, 97. सैं॰ saiṃ-, in the words 37, 47. सत्॰ sat-, in the words 17, 67, 77.

Of these, सत्त॰ is simply the assimilated form of the first period, which in the compounds modulates into हत्तर, a form which is found even in the first period. This word is noticeable as the solitary instance in Hindî of a change of the initial स into इ, though in Panjâbî the change is so common as to be regular.

सात is the regular form of the 1st class, like भात् and others. In सता we have rather a curious phenomenon which requires fuller analysis; the words are सताईस, सतान्वन, सतासि, सतान्वे. In the first period we do not uniformly find the long  $\hat{a}$ , e.g. sattavisatimo, 27th, but sattānave, 97. But there is a remarkable uniformity in all the seven languages of the second period. We find the long  $\hat{a}$  in all of them for 27; in all but Panj. and S. for 57; in all for 87 and 97.

Judging at first from सताइस only, and the Hindî chiefly, I thought this abnormal long  $\hat{a}$  arose from the  $\mathbf{a}$  of निम्नित amalgamating with the inherent  $\check{a}$  of सप्त, first from av (saptavinsati) into au (sattavis), and thus, according to the usual Hindî analogy, into  $\mathring{a}$ . But this suggestion broke down in two ways—lst. Because the Marâṭhî has both the long  $\mathring{a}$  and the v in सत्तावीस; so also have the Sindhî and Gujarâtî; and 2nd. Because we have the long  $\mathring{a}$  in words where there existed originally no v to coalesce with it into au.

The opinion I am at present most inclined to is that the presence of the long  $\hat{a}$  is due to the accent of the Sanskrit.

Saptan is undoubtedly oxytone, and though I have not been able to find in the dictionaries or other published works any instance in which the accent of saptavinșati is given, yet I have no reason to doubt that, as in Greek, the accent remains in the compound word just as it stood on each member when separate. In Greek the rule which forbids us to place an accent further back than the antepenultima obscures the analogy, but in Sanskrit we have no such restriction, and "saptávinsáti," with the major accent on the penultima, and the minor on the præ-antepenultima is quite possible. Assuming this, and seeing that the two last syllables "ati" have disappeared, the word would fall into the form of a paroxytone, and the accent on the syllable ta being the only one left, would assume such prominence as to insure its remaining long throughout the ages. I own I was unwilling to admit this possibility of the influence of the accent, and sought for some time for another solution; I was unwilling to admit into the discussion of a question, already sufficiently complicated, the disturbing influence of another unknown quantity in the shape of the Sanskrit accent; but I fear there is no help for it. That a subtle and apparently irregular system of accents haunts and flavours the pronunciation of modern Hindustânî is as evident as in the case of modern Greek. Why do we say káhân, laying the accent on the first syllable though short? why káho, not kahó? why a dozen other anomalies? This unwelcome conviction thrusts back my lucubrations on the nexus till the Sanskrit scholars of Europe are kind enough to dig out and impart to us more facts and laws about the accents of that language.

We next come to the curious form  $\overline{4}$ , only found in 37 and 47. In these two sets of numbers we find that all the odd numbers except the first take this form in ain, thus,

33. तैतीस taintis.

43. तितालीस taintális.

35. पैतीस paintis.

45. पैतालीस paintális.

37. सेंतीस saintis.

47. मैंताजीस saintális.

The other languages offer only faint indications of simi-

larity. P. has सेंचो, B. साईचीश, U. संइतिरिश, but none of the others. I think it has arisen from a sort of rhyming propensity, sometimes observable in Hindî. From ते or ते the transition to ते was easy, the insertion of the nasal in season and out of season being a weakness of that language. In the word for 35 they had at first panchatrinsat, which soon got altered into panchtis; but here they had a strong nexus, च+त. The च therefore dropped out, and the resulting double त was reduced to a single, and the preceding vowel compensatorily lengthened, so that the form पातीस arose; to make which rhyme with the word for thirty-three would be irresistible. So also the 37, which was probably सातीस, was dragged into the scheme, and became सेंतीस.

The only remaining form  $\operatorname{td}$  is found in 17, 67, 77. In 67 the word was originally  $\operatorname{sapt\acute{a}sh\acute{a}sh\acute{t}ih}$ , with two accents close to one another, the latter of which, so to speak, kills the former, so that when by the usual Prâkrit process the first member is modified into  $\operatorname{satta}$ , the second  $\operatorname{a}$ , being atonic, falls out; and though the first t also falls, yet, as it is in the first syllable of two, the latter of which is accented, no compensatory lengthening can take place.

In 77 we ought to have सता, and probably such a form did once exist, but was crushed into sat by the weight of the double tt of hattar so close after it. Only Marâthî retains a form satyâhattar. Similarly, the form for 17 was originally sattârah, and is so still in Panjâbî; perhaps some obscure idea of its similarity in sound to sattar, "seventy," may have operated in the minds of the people to shorten it. For your Hindustânî is a dreadful jingler: he twists his words into absurd semi-rhymes, as bartan-artan, for bartan, "a plate;" gâri-wâri, for gâri, "a cart;" ultâ-pultâ, for ultâ, "reversed," and so on.

[Here, for the present, I must stop, reserving the analysis of the mixed and weak nexus for a future occasion, as I am obliged to return to India immediately. I hope to be able in a few months to send home the remainder of the argument, together with the rules deducible therefrom.]

ART. IX.—Some Remarks on the Great Tope at Sanchi. By the Rev. S. Beal.

Dr. Fergusson's book on "Tree and Serpent Worship" has opened a large field for inquiry and research. After looking through the photographs and lithographed scenes relating to the Sânchi Topes, two questions naturally suggest themselves, viz.: What was the idea which suggested the peculiar form of the Indian Tope? and, What are the scenes so carefully represented on the rails and gateways at Sânchi and Amravati?

With respect to the first question there is no need to say much, as at best we can only speculate where there is no possibility of proof. But it would seem that the symbolism of the Tope is like that of other sacred edifices, viz., to figure out an idea of the world, or the heavens and the earth. Rémusat, in one of the valuable notes found in the Fo-koue-ki (p. 92), has observed: "Stûpas are not erected on the tombs of religious persons or laymen, but only simple stones, which by their form symbolize the five elements, viz.: ether, wind, fire, water, and earth; they are called Stûpas by analogy.

Their figure is this: The lowest portion represents the earth, this is surmounted by the emblem of water; the triangle represents fire, the crescent is wind, and the cone denotes ether. Hence, instead of Chinese characters, it is the custom to inscribe on these several portions of the monu-

ment Sanscrit characters indicating the several elements; on the highest the letter  $\mathbf{q}$  to indicate 'ether,' on the second  $\mathbf{q}$  to denote 'wind,' on the third  $\mathbf{\tau}$  to denote 'fire,' on the fourth  $\mathbf{q}$  to denote 'water' (sc. Varuna), and on the lowest the letter  $\mathbf{q}$ " [which being the first vowel symbol-

izes the first element, i.e. earth]. This quotation has been noticed by Dr. Fergusson (p. 106, Tree and Serpent Worship), but he simply founds on it a theory for the origin of the Trisul. I would rather see in this record an explanation not only of the earliest religious structures,1 symbolical of the Elemental Universe or Nature, but also of the Tope. The Great Sânchi Tope rests upon a square base or plinth 14 feet high and 121 feet square, round which is a procession path 5 feet 6 inches wide. This portion of the building would therefore symbolize the first element, "earth." Above the square rises a great dome or hemisphere to a height of 39 feet. This dome represents the second element, "water." It would be impossible to place a complete circle of stone on the square plinth, the hemisphere therefore is used to indicate the element. Dr. Muir has observed, that "when the idea of Varuna as the all-embracing Heaven had been established, and on the other hand the observation of the Rivers flowing towards the ends of the earth and to the sea had led to the conjecture that there existed an Ocean inclosing the earth in its bosom, then the way was thoroughly prepared for connecting Varuna with the Ocean." [Compare the entire account given by Dr. Muir, J.R.A.S. vol. i. part i. N.S. pp. 77, ss.] Above the dome, at Sânchi, we have a Tôran, respecting which I will quote from Hodgson: "Between the hemisphere and the pyramid is a short square basement for the latter, upon each of the four sides of which a pair of eyes is graved.2 The hemisphere is called the 'garbh,' the basement the 'Tôran,' and the pyramid the 'Chura-mani' (p. 43, Collected

<sup>1</sup> I refer to Logan stones, etc., but principally to those primitive structures called "Baitulia" or "Bœtylia." I take the rows of stones represented in p. 206 of Sir J. Lubbock's work "On the Origin of Civilization, etc.," to be Bœtylia, or "anointed stones"—the red mark round the black (which Colonel Forbes Leslie compares to "spots of blood") being in fact the "marks of consecration" or "anointing." It is well known that "idols" or "josses" in China are consecrated by a dash of red or vermilion across the eye. With regard to the derivation of the word "Bœtylia" as signifying "elemental stones," whilst it is generally referred to a Semitic root, I venture to suggest at a to get as denoting that these stones in the first instance represented the "Elemental World."

<sup>&</sup>lt;sup>2</sup> These eyes evidently denote the watchful care of the "Four Kings" (Chaturmahārājahs) over the affairs of men.

Essays)." The Tôran is merely a contraction of the Sanscrit Tôranya or Tôrana [तारण], "an ornamented gate or entrance," and denotes the entrance or door to the abode of the celestials.¹ [Around Japanese temples are erected gateways called "Tôris," evidently derived from the same root.] Above the Tôran rises the pyramid or cone, which Hodgson calls the Chura-mani, [?प्रमाण] denoting the element "fire;" and above this the mysterious Trisul, combining the two elements of "air and ether," and used by accommodation as the emblem of the "Highest." If these several elemental emblems be thus united, we have the figure of the "Tope."

In confirmation of this argument, we observe that Mr. B. Hodgson explains the division of the cone which surmounts the "garbh," or "dome," of the Tope, as symbolical of the thirteen heavenly mansions above the sky (p. 43, Collected Essays). But if this be the true explanation, it seems to follow that the lower portion of the Tope must represent the "lower world."

This opinion is borne out by the use of the word "ts'a," in Chinese, for a Pagoda, or Tope. This symbol represents the Sanscrit "kshetra," a land of Buddha," and comprehends the entire chiliocosm, over which Sâkya Tathâgata is supposed to rule. Now this was the idea of the expanded form of the Tope, from which the Pagoda, in China, is derived; but the expansion of an idea necessarily assumes

¹ Compare the remarks of Mr. Baring-Gould ("Origin of Religious Beliefs," pp. 98, 99): "The localization of the Deity in heaven gave birth to a number of other names. From the first moment that the consciousness of a God rose upon man's soul, like the morning sun, he lifted his head on high and sought him in the sky. That vast uplifted sphere, new radiant with light, now twinkling with countless stars, attracted the wonder of man, and in it he placed the home of his gods. Heaven was an upper world inhabited by Deities. The Esth supposed it to be a blue Tent, behind which Ukko the Ancient, and the sustainers of Sun, Moon, and Stars and the guardians of the clouds, dwelt in splendour. Men for a long time supposed that the earth was a flat plane, surrounded by the sea, and that the sky was a roof on which the heavenly bodies travel, and from which they are suspended as Lamps. The Polynesiaus, who thought, like so many other peoples, ancient and modern, that the sky descended at the horizon and inclosed the earth, still call foreigners papulangi, or heaven-bursters, as having broken in from another world outside. The sky is to most savages what is called in a South American language mumeseke, that is, theearth-on-high [compare "heaven," that which is "heaved up"]. There are holes or windows through this roof or firmament, where the rain comes through, and if you can climb high enough, you can get through and visit the dwellers above, who live, and talk, and look, very much like people upon earth."

the germ as a constant, and this germ I take to be the

primitive symbolism of which we are speaking.

This position is strengthened by some indirect considerations; take, for example, the description of the kshetra of the Tathagata Padmaprabha, found in Burnouf, Lotus, f. 38, b. The kshetra, we must bear in mind, is the Chinese ts'a, and this is the common term for a Pagoda or Tope. Now, the Lotus describes the land of Padmaprabha in the same terms as the Chinese accounts 1 represent the "happy lands" or "domains" of the various Buddhas, "surrounded by inclosures, and rows of trees covered with flowers and fruits. the whole composed of the seven precious substances;" but the Lotus adds a peculiar item in this description, "the inclosures are traced in the forms of a square draughtboard" ("d'etoffe a carreaux pour jouer aux dames ou aux dés," Lotus, note, p. 363). If we now turn to the 88th plate, fig. 1, Tree and Serpent Worship, we see at once that the inclosure of the Amravati Tope was precisely planned according to the description of the inclosure of a kshetra of Buddha. The Lotus-discs, in the plates 48, 49, etc., are precisely the "ashtapada" of the Lotus, the discs representing "draughts" as they are carved even down to this day in the East. We argue, therefore, that the inclosure at Amravati was designed to represent the inclosure of a Buddhakshetra, and if so the Tope itself symbolized the kshetra.

This is illustrated further by Figs. 1 and 2, Plate xci., of the same work. Dr. Fergusson speaks of "the crowd of umbrellas which crown the Tee in these cases as a curious ebullition of Hindu fancy;" but I conceive the intention was quite in agreement with the general symbolism of the structure. The single umbrella (chhatra) denoted dominion over "one world;" the exaggerated system of worlds, known as a chilicosm (of which such repeated mention is made in all the later Buddhist Sûtras), was, therefore, denoted by the "crowd of umbrellas," which we see in Plate xci. And the rule of increase will be observed, from the single chhatra to four, (denoting the four cardinal points), and from four to eight

<sup>&</sup>lt;sup>1</sup> Translated, we must remember, from Sanscrit.

(including the half points), and from eight to an indefinite number, agreeing accurately with the actual expansion of belief which occurred (relating to the composition of the Universe) in the History of Buddhism.<sup>1</sup>

But the general argument that religious structures were in the first instance symbolical of the upper and lower world, is strengthened by considering that this was the allowed meaning of the figure and furniture of the Jewish Taber-Josephus and Philo Judæus both assert the fact, and it is insisted on by the writer of the Epistle to the Hebrews. Cosmas also, in his Topographia, labours to prove that the Tabernacle in the wilderness was a pattern of the Universe (Yule's Cathay, etc., xlvii). We are told by Porphyry (de antro Nympharum), that Zoroaster consecrated a natural cell, adorned with flowers, to Mithras, for he thought a cavern to be a fit emblem of the world fabricated by Mithras. Plutarch, in his account of the old Temple of Vesta, says it was constructed of an orbicular form, to shadow out by its shape not so much the world as the Universe (de Iside et Osiride, p. 67; Maurice, Indian Antiq., iii. p. 504). And Maurice concludes generally that all circular temples symbolized the Universe (iii. 508). So, again, says Pliny, when speaking of the Pantheon, "the dome was of a convex form, that it might be the model of the Heavens" (ut fastigiatam cœli similitudinem ostenderet) [quoted by Maurice, as above]. Such are some general observations in proof of the theory that we may detect the idea of a cosmographic symbolism in all sacred structures, and not the least in the form and developed portions of the Indian Tope.

I proceed to make some reference to the scenes of the sculptures on the gates and beams at Sânchi. But before doing so, I would start the query, whether there is any proof to be gathered from the character of these sculptures, that the followers of Buddha worshipped either the Tree or Nâga? If they did, nothing in the world would more effectually destroy the theory of their religion. The Buddhist convert, theoretically at least, acknowledged no superior to himself in heaven or earth. The Nâgas were saved from the power

<sup>&</sup>lt;sup>1</sup> This expansion is fully related in all the later Sûtras. Vid. e.gr., Loius, p. 113.

of the Garudas by believing in Buddha, and becoming his disciples; and as for Trees, in so far as they were associated with the history of the emancipated Buddha, doubtless, they were "objects of worship," but it was a worship of association, just as the wayfarer bows before the symbol of the Cross, or as the pilgrim, on the first glimpse of the sacred city, flings himself on the earth. We do not worship the building in which we say our prayers; it is a sacred building, just as the Tree in the eyes of the Buddhist was a "sacred tree," but he did not worship it.1

But to pass on to some identifications. The scene depicted in Fig. 2, Plate xxxii., is a lithograph taken from one of the sculptured architraves of the Northern Gateway, rear-view; it is not copied from the photograph, but is the only part of the horizontal architraves drawn by Colonel Maisey; the difficulty of getting up to them was so great, that nothing more than this was attempted; it is, however, a very valuable excerpt, and helps to unriddle the entire scene, which occupies both the front and rear face of the beam. Both these scenes embody the history of Sâkya, when he was born as Vessantara. This birth was the one immediately preceding his incarnation as Buddha. It will be necessary to make some reference to this Jâtaka, so far as it is related or referred to in works bearing on the subject. Burnouf (Lotus, 411) refers to it in these words: "C'est dans ce sens que Mahânâma parle de la dernière existence de Sâkvamuni, avant qu'il vint au monde comme fils du roi Suddhôdana, 'vêssantarattabhâvê thitô,' quand il était dans le corps de Vêssantara. On sait en effet que Vêssantara est, chez les Buddhistes de Ceylon, le nom d'un personage sous la figure duquel l'âme de Sâkyamuni parut au Again, this Jâtaka is referred to by Bigandet monde." (Legend of the Burmese Buddha, p. 83) in these words, "Without alluding to those great offerings I have made during several previous existences, I will but mention the seven great ones made whilst I lived as Prince Wethandra (Vessantara)."

<sup>&</sup>lt;sup>1</sup> In cases where the Nâga, the Horse, the Throne, etc., occupy the place of honour on the Dagoba (as in Plates LXXX., XCI., etc., Tree and Serpent Worship), I should suppose the association to be with the history of Nuchilinda, Kantaka, the Vajrâsâna, etc.

Again, on p. 165 of the same work, we read, "He then caused a shower of red rain to pour down over the assembled multitudes. . . . This is not, said Buddha, the only time when such a wonder has happened; the same thing once took place when I was Prince Wethandra. He went on relating the most interesting circumstances of that former state of existence." Again, in the account of the mission of Song-yun, p. 195 (Travels of Buddhist Pilgrims), we have an allusion to the sacredness of the spot, where Vessantara underwent his selfimposed sufferings. This place, according to Julien, was called Dantalôka (Jul. ii. 122). The Prince, both in Song-yun and Julien, is called "Sudatta," but I have identified this personage with Vessantara (Buddhist Pilgrims, p. 194, note), on grounds that will not be disputed. But, finally, the best and fullest account of the Vessantara Jâtaka is found in Hardy's It will be necessary, for the purpose of Manual, p. 116. identification, to give a précis of this relation. "In former times, in a city called Jayaturá, reigned a king called Sanda or Sanja; his principal queen was called Phusatí, and their son was called Wessantara, so named from the street in which his mother was passing at the time of his birth. [Observe the very curious similarity between this name and Wessanagara, the old Besnagar, close to Sânchi; compare Tree and Serpent Worship, p. 90.] From the moment he could speak he gave proof that his disposition was most charitable. [Compare the Chinese Shen-chi, "the charitable one" (Song-yun, p. 194).] When arrived at the proper age he married Madrí-déwí, the daughter of the King of Chetiya. [Compare, again, the singular coincidence in the account of Mahanama: "Asôka, when sent to be Governor of Ujjeni, tarried at Chaityagiri, and there married Devî, the daughter of the chief." They had a son Jáliya, and a daughter Krishnájiná. At this time there was a famine in Kalinga from the want of rain; but the king, having heard that Wessantara had a white elephant that had the power to cause rain, sent eight of his Brahmans to request it. Wessantara at once gave it up, on which he was banished from the kingdom to the rock Wanka-giri. His wife, Madri-déwi, refused to forsake him, on which all their treasures were collected and given away in charity to the mendicants, and they, with their two children, retired into banishment. The nobles then brought a chariot, and Madrídéwi, taking her daughter in her arms, and her son by his hand, entered it. Two Brahmans followed them, and requested the gift of the horses that drew the chariot. Without hesitation they were given, but Sekra, observing what was taking place, sent four Dewas under the disguise of horses, that voked themselves to the chariot and drew it. Again, another Brahman cried, 'Sir, I am old, sick, and wearied, give me your chariot.' The chariot was readily given up. The Prince then carried his son, and the Princess his daughter, and so set off on their journey to Wanka-giri. Wiswakarmma had prepared for them two Pansals (leafy huts). Here they dwelt with their children in the garb of ascetics. At length an aged Brahman, called Jujaka, set out to ask the gift of the two children, as slaves. Wessantara, in the absence of his wife, resolved to give up the children, who had fled away and hid themselves. He went forth and called them back and delivered them to the Brahman. The children, however, seeing the Brahman stumble and fall as he went down the hill, ran away and came back to their father; the father again gave them up, and the Brahman, tying their hands together, drove them along with a stick, beating them as they went. At length, when Madri-déwi was about to return home, Sekra sent four Dewas to assume the form of wild beasts, to delay her return. When Sekra perceived that Wessantara had given away the children, he assumed the appearance of an aged Brahman, and went to the rock. Wessantara asked, 'Why have you come?' To which he replied, 'I have come to receive the Princess as my slave.' On this he gave her up also. As the result, both Madri-déwi and the children were restored to Wessantara, and all returned safe and sound to Jayaturá."

Let us now compare this account with the sculptures. We read (p. 101, Tree and Serpent Worship), "the central compartment of this beam has on its right the gateway and

buildings of a walled city [Jayaturâ]. Inside are numerous spectators, and some figures apparently doing homage to two sacred elephants or their riders. [The two elephants differ from the account in the Jâtaka, where only one is mentioned.] Near the outside of the gate stands a male personage, wearing the Dhotî and large turban [Vessantara], attended by respectful figures in various attitudes. Chaori and Chatta which accompany him mark him either as a king or a saint. There are also a number of women with covered jars or vases. [Madrî-devî giving away her treasures.] Next appears a four-horsed chariot of a different shape from those seen elsewhere. It contains a man dressed as above, attended by Chatta and Chaori bearers, and two children with tufts or plumes on their heads. \[ Madri-devi and \] her husband, with their two children. On the left, another stage of the ceremony is apparently represented. The same chariot is seen unharnessed, the yoke held up by a woman. The two children still occupy it, but the king, or whoever he may be, is standing near the pole with his arm stretched over the yoke, and is apparently conferring some grant or gift to the priest or ascetic before him, into whose hand he is pouring water, an ancient mode of sealing a gift. \(\int Vessantara\) giving away his horses.] The costume of this last figure is what is usually seen in the only class that can be identified with priests, ascetics, and saints. Above this group, and facing towards the city, is another empty chariot, which a man, dressed as the preceding, is about to harness. [The four Devas sent by Sakra in the shape of horses.]"

This portion of the scene is tolerably complete. Colonel Maisey refers the plot to the dedication of the chariot to the Sun. Dr. Fergusson regards it as a meeting between Asoka, or some Hindu prince, with the Dasyu chief of the place. It is tolerably plain, however, that the scene represents the first part of the history of Vessantara. Let us now turn to Plate xxxii. Fig. 2, which is a lithograph representing the rear-view of the same architrave. On the extreme right we observe the two Pansals, built by Visvarkarma. Vessantara and Madrîdevî are seen on the left in their social relations, sitting to-

gether in front of one of the Pansals (in which scene Madrîdevî is probably relating her dream), and also engaged below in some domestic pursuits with their fire-pot and chatties. A little further on the left we see Vessantara sealing the gift of his children to the Brahman, by pouring water on his Further to the left we see the Brahman beating the children with a stick because they had run away from him. [Compare Buddhist Pilgrims, p. 195.] On the left, again, we see Vessantara giving away his wife to Sakra. In the upper division of the scene we observe the beasts sent by Sakra to delay the return of Madrî-devî; whilst the Brahman with his water vessel, plotting to arrive when Madrîdevî is out, is seen in close contact with the lady; the presence of the water vessel in his hand illustrates the text of the Jâtaka, "When the prince saw the Brahman approaching, he told his son Jáliya to go and meet him and carry his water vessel." The scenes on the extreme left represent the happy termination of the whole adventure, and the restoration of Vessantara, children, wife, and elephant, to the kingdom of Jayaturâ.

There can be no reasonable doubt, I think, that this is the real history of the sculptured scene on this architrave, rear and front. It follows, then, and this is an important consideration, that whatever age is assigned to the gateways of the Sânchi Tope, the same antiquity, and greater, must be granted to the Jâtaka in point. And if to the Jâtakas, then to all the legendary history of Buddha. This explanation also militates against the theory of a Dasyu element in these sculptures. The Dasyus, in fact, are Buddhist mendicants.

I am inclined to refer the scene, Plate xxxvi. Fig. 1, to the Sâma Jâtaka. This fable is given by Spence Hardy (Eastern Monachism, p. 275) in these words, "When Gótama Bodhisat was born in a former age as Sáma, son of the hermit Dukhula, he rendered every assistance to his parents, who had become blind when he was sixteen years of age. It happened that as he went one day for water to the river, the king of Benares, Piliyaka, entered the forest to hunt, and as Sáma, after ascending from the river, was as usual surrounded by deer, the king

let fly an arrow which struck Sáma just as he was placing the vessel to his shoulder. Feeling that he was wounded. . . . he called out, 'Who is it that has shot me?' and when he learned that it was the king, he related his history to the monarch, and said that his greatest grief arose from the thought that his blind parents would now have no one to support them. When the king perceived the intensity of his grief, he promised that he would resign his kingdom, and himself become the slave of his parents. Meantime a Dewi, descending from the Dewa loka, remaining in the air near the king without being visible, entreated him to go to the Pansal, and minister to the wants of the blind parents of Sáma. was obedient and went. . . . The body of Sáma having been brought to the huts, was restored to life by the united Sachikeriyas of the Dewi and the parents. The parents also received their sight, and the Dewi repeating the ten virtues of a king to Piliyaka, enabled him to reign in righteousness, and after death to be born in heaven."

In the Lithograph referred to, we observe the parents of Sâma seated outside their Pansals. They are evidently blind, for the monkeys are stealing the fruit and playing mischievous tricks close to their persons without interference. In front of their huts is the forest, full of deer. The river flows through it, and we observe Sâma just coming from the bank and raising the water vessel to his shoulder. The Devî (or Deva), standing close to the boy (and probably unseen by him), is introduced to indicate the pious act of the child, and the reverence due to such piety. On the left of the scene is the same boy, wounded by an arrow: his identity with the first figure is shown not only by the likeness and dress, but by the water vessel lying on the bank, evidently fallen from his shoulder at the moment when he was shot. The archers are just above. It does not appear that the king is one of them, but this is not material to the history. In the rear, on the left, we see the king, with his water vessel, ready to resign his kingdom, and become the slave of the blind hermits. The Devî is standing close by. Finally, in the left corner, we see the happy termination, the parents restored to sight, and the boy come back to life. This comparison appears also tolerably evident, and tends again to establish two points—1. The primitive age of the Jâtakas; and 2. The style of dress worn by Buddhist hermits, viz., the kilt and a sort of sarang worn over the left shoulder (probably from motives of modesty).

I now pass on to identify some other scenes, beginning with the Northern Gateway. The subject of the top rail is adoration to five Dagobas and two trees. To illustrate this, compare Bigandet (Legend of the Burmese Buddha, p. 100), and Spence Hardy (Manual of Buddhism, p. 51). Fah-Hian (Buddhist Pilgrims, p. 125) also mentions the several localities round the sacred tree, consecrated by the erection of towers or Dagobas. There are two lists of seven places; first of all those spots which were the scenes of events previous to Buddha's inspiration; and, secondly, seven others sanctified by his presence after arriving at complete wisdom. The two lists are as follows:—

#### FIRST LIST.

- 1. The place where he practised austerities for six years.
- 2. The place where he bathed and the Deva assisted him.
- 3. The place where the two shepherd girls gave him milk and rice.
- 4. The place where he ate the rice.
- 5. The place where he sat at the entrance of a cave.
- 6. The place where the Devas gave him the grass mat.
- 7. The place where he sat under the Pei-to tree.
  On each of these spots, Fah-Hian says, towers are erected.

#### SECOND LIST.

- 1. Where he sat for seven days beholding the Bôdhi tree.
- 2. Where he walked for seven days.
- 3. Where the Devas built him a hall.
- 4. Where the Dragon Muchalinda protected him.
- 5. Where Brahma saluted him.
- 6. Where the Four Kings gave him an alms-bowl.
- 7. Where the merchants brought him wheat and honey.

From these lists we may select most of the incidents sculptured on the Sânchi gates.

And so we have in the Burmese Life of Gaudama, by Bishop Bigandet, a list of seven trees, under which certain occurrences took place connected with Buddha's history, and also in the Singhalese accounts. These lists are as follows. (The figures denote the pages of the book.)

#### BURMESE ACCOUNT.

| SINGHALESE ACCOUNT. |  |   |      |  |  |  |  |  |  |
|                     | 1.   | The Nâga tree, Ajápála, Manual of Buddhism          | 167  |  |  |  |  |  |  |
|                     |  | The Sal tree  | 170  |  |  |  |  |  |  |
|                     | 3.   | The Bó tree.  | 170  |  |  |  |  |  |  |
|                     | 4.   | The Ajápála tree                                    | 182  |  |  |  |  |  |  |
|                     |  | <b>0</b> .  |      |  |  |  |  |  |  |

Probably the seven trees on the middle architrave of this gateway (front view) may be referred to one of these lists.

 5. The Midella tree
 182

 6. The Kiripalu tree
 182

 7. The Ajápála tree
 183

The elephants pouring water from chatties over the figure seated on a lotus, on the square blocks, illustrate the expression found in Southern records, "pouring water from a vessel shaped like the trunk of a Chhadanta elephant" (Tennent, Christianity in Ceylon. Compare also the account found in the Vishnu Purana (Wilson, p. 76, line 21). This vessel of consecration, which is several times visible among the sculptures, owes its shape therefore to this comparison.

The subject of the intermediate rail (rear view) of this gateway is probably the temptation scene of Bôdhisatwa.

Bigandet's account of this incident is as follows: "At that time Nats (Devas) surrounded Phralaong (Bôdhisatwa), singing praises to him. The chief Thagia was playing on his conque, the chief Nâga was uttering stanzas in his honour, a chief Brahma held over him a white umbrella. .... Manh Nat (Mâra), turning to his followers, cried to them, 'there is indeed no one equal to the Prince Theiddat (Siddhartha), let us not attack him in front, let us assail him him from the north side." (p. 81.)

In the sculpture we see the Prince seated on his throne in the centre; the Devas in front are inviting him to advance to the tree; the chief Brahma holding a white umbrella over his head, and the Nâga just in front reciting his praises; on the right is the ghoulish army of Mâra, preparing to attack him, directly he takes his seat under the Bôdhi tree.

consider this explanation tolerably certain. The female is sure on the left of the tree is perhaps intended for Sujatâ, ith her gift of Nogana (Manual of Buddhism, p. 168, Buddhist Pilgrims, p. 121).

I also identify the scenes on the inner face of the left-hand pillar of this gateway. They are designed to represent events connected with the conversion of the Kâsyapas. As these events may be found in all "Lives of Buddha," it will only be necessary to allude briefly to them.

The upper scene represents the preparation of an offering to be made to Kâsyapa. We read in Bigandet (p. 132), "On a certain day the people of the country had prepared offerings on a large scale, to be presented to Kâsyapa," or, as Spence Hardy gives it, "One day great multitudes came from Anga and Magadha, with offerings for Uruvel." (Manual of Buddhism, 190.) As to the character of these offerings, we are told, in another place, "they consisted of bulls, cows, goats, calves," etc. (ibid. 272), and we may reasonably suppose that cakes would be included in the list. The upper portion, therefore, of this series of sculptures may well refer to the "preparation of offerings for the Kâsyapas." There is an altar, but no tree, from which we may suppose that Buddha was not the object of the intended ceremony, and the group-

ing generally seems to indicate a levity of character, inconsistent with anything we know respecting his worship.

In the next scene we have Buddha's adventure with the Naga (the object of the Kasyapas', and the other fire-worshippers', reverence). In the Pansal or hut, on the right, is seated Kasyapa (Bigandet calls it "a cell," p. 131). In the centre are various animals assembled in the hall for sacrifice. We must not wonder to see the elephant there, for we read (Manual of Buddhism, 150): "On their arrival the animals were all assembled in the place of sacrifice; but when he lifted up his knife to slay the elephant, the affrighted beast cried out," etc.

In the upper centre is the Någa Temple; the flames issuing from the roof denote the victory of Buddha. The five men on the right, with closed hands and gratified countenances, denote the five disciples converted in the Deer Park, and the three men on the left, whose hands are unclosed, and whose faces indicate bewilderment rather than joy, would represent the three Kåsyapas, who were converted only after a series of subsequent miracles. The figures in front may well represent the disciples of Kåsyapa flinging the fireworshippers' utensils into the water¹ (vid. Bigandet, p. 131, and Manual of Buddhism, p. 191).

The lower group I take to be a representation of an immediate preparation of a sacrifice among the fire-worshippers. We have an account of such a scene described in the Manual of Buddhism by Spence Hardy, p. 190. The splitting and non-splitting of the wood, the burning and non-burning of the fire, seem here to be indicated. Dr. Fergusson says, with respect to the central figure, that "he is pouring something into his fire-pot." I take it, however, that the old man is simply blowing with his bellows (observe the primitive form of these bellows, both in this figure and in the hands of the old man just below him) into his fire-pot, but the fire won't light, whereas the other fires are burning brightly, according to the words of the legend; and so in the case of the woodsplitting on the right, one of the jótis seems to be labouring

<sup>&</sup>lt;sup>1</sup> Dr. Fergusson however does not agree with this, and I do not wish to urge it.

in vain to split the log at his feet, whilst the other has it all his own way.

The lower scene in front on the left-hand pillar of this Gateway I consider to represent life among the Devas. Compare the following extract from the Chinese: "Persons who die pure in word, deed and thought, are born after death in Heaven. When transported to that higher world, if born of the male sex, they find themselves seated on the knees of lovely women; if born as women, they find themselves seated on the knees of the HeavenlyKings." (Hi-Shai Sûtra, quoted in the Fah-kai-lih-to.)

In this case, we have the scene artfully placed in the lowest compartment of the pillar, so as to engage the attention of devotees and visitors, and tempt them with a very pretty exhibition of "joys in store" for the faithful; but the similar scene on the fallen pillar of the western gateway, is pourtrayed in the upper compartment. The latter picture (Plate xxxvii. fig. 2) is so literally described in a Chinese account of the Triyastriñshas heaven, that I cannot do better than bring it in here to illustrate the whole subject. "In the centre of the Triyastriñshas heaven, is the city of Sakra, called Sudarsana; around this city, are the abodes of the Devas, arranged in a circular order. There are four parks, viz., the Chariot Park for driving and riding, the Park for athletes or the Gymnasium, the Forest Park for rustic pleasures, and the Joy Park, where the Devas and Devîs give way to every kind of pleasurable indulgence. Each of these parks has a delightful pleasure-bath in the centre of it . . . . At the time of being born in this heaven, a flower is produced in the middle of the hand of one of the Devîs, by which she knows that a Deva will be born. Accordingly, after seven days, the child is born. He is perfectly acquainted with the divine law, and proceeding to the middle of the palace selected for him, he is met by a goddess, who welcomes him, and serves him. At the time when the Devas wish to go out, the females surround them, they amuse them with every kind of music, they wander from palace to palace, they partake of divine food and drink heavenly nectar, whilst the women afford them every species of delight! Every palace is provided

with precious ornaments of gold, silver, lapis lazuli, etc., and each has a lovely park and precious trees belonging to it." Again, the same work has the following description of the life of the four heavenly kings (chaturmahārājahs). "When first born, they are only of a diminutive size, but being provided with vessels full of divine food, they become like other Devas. When they have bathed themselves, they lounge below fragrant trees, which bend down their branches to perfume their bodies. They then repair to trees that provide them with clothes; to the adorning trees, to the music trees, to the hair-dressing trees; they wander from one to the other, partake of every species of sensual pleasure, enter delicious baths, and wander from palace to palace." (Fahkai-lih-to.)

These descriptions seem to tally very well with the luxurious scenes on the pillars alluded to, and may help to redeem the credit of the Buddhist church-militant from the slur to which these representations might otherwise subject it.

But it may be asked, did Buddhists encourage themselves by hopes of such joys as these in a future world? We find the following quotation in the Chinese work already alluded "The Great Agama Sûtra" says, "Whoever practises the moral discipline enjoined by Buddha, even though he be not a professed disciple, shall be born in the Triyastriñshas heaven." The Sûtra of good rules says, "Whatever priest or priestess observes the 250 rules (viz., of the Pratimôksha) shall be born in the Triyastriñshas heaven." The miscellaneous Âgama (Samyuktâgama) says, "Whoever bestows charity, although engaged in worldly pursuits, provided he does not break either of the great commandments, after death shall be born in the world of the Devas." Again, it is said, "If any man observe the commandment against killing, then he is born in the heaven of the four great kings; if he neither kills nor robs, he is born in the Triyastriñshas heaven; if he neither kills, robs, slanders or lusts, he is born in the Yama heaven; if he neither kills, robs, slanders, lusts, or lies, he is born in the Tusita heaven."

From these extracts (and Burnouf, Lotus, 219, will confirm

<sup>1</sup> Compare the result of the food given by Thetis to the infant Phoibos (Coxe, Mythology of the Aryan Nations, vol. ii. p. 22).

them) we gather the object of the sculptures before us, viz. to remind spectators, by representations (oculis subjecta fidelibus), of the reward even of limited obedience.

The upper compartment of the left-hand pillar evidently alludes to the descent of Buddha from the Triyastriñshas heaven, on the beautiful ladder which Sakra and Brahma provided (Buddhist Pilgrims, p. 63, etc.). The lowest tablet of this face of the pillar may be intended to describe the joy of the followers of Buddha, on his return from the thirty-three-heavens. They are therefore paying their adoration to the sacred fig-tree.

The Dagoba scene on the inner face of this pillar perhaps refers to the Dagoba erected on the spot where Buddha alighted from the ladder on which he came down from heaven. At least, Bigandet notices that "on the spot where all the Buddhas set their feet when coming from the seat of Tawadeintha, a Dzedi has always been erected." (Legend of the Burmese Buddha, p. 214).

The monkey scene below this (*Plate* xxvi. fig. 2) refers to the legend of the monkeys, who took the pâtra of Buddha and filled it with honey, and then brought it to Buddha (Jul. ii. 387).

The next scene (*Plate* xxvi. *Fig.* 1) alludes, I think, to the honour paid to Buddha by Brahma, related by Fah-Hian (*Buddhist Pilgrims*, p. 125), whilst the square stone in the rear may refer to the seat which Buddha occupied on this occasion.

I might proceed, if space allowed, to speak of the sculptures on the other gateways; but perhaps enough has been said to establish a probability that these scenes are really quasi-historical, and not mere inventions or meaningless grouping of figures according to the taste of the donor or the artist; and if so, they serve to fix a date, even it be only an approximate one, for the development of the fables to which they allude. We are thus enabled to refer the several records of the adventures of Buddha in his early career to a period at least not later than the Christian era. How much before this we cannot say, but it seems likely that Dr. Fergusson is correct in dating many of the scenes from about the time of Asôka.

ART. X.—Ancient Inscriptions from Mathura. Translated by Professor J. Dowson.

The Inscriptions which are the subject of the following observations were collected by General Cunningham at Mathura, in the execution of his functions as Archeological Surveyor to the Government of India. The account of his visit to Mathura is given in his report for the season 1862–3. It is not my intention to do more with these Inscriptions than to offer decipherments and translations, with a few remarks upon their character and language. General Cunningham himself will sum up the results derivable from them. His intimate knowledge of Mathura and other similar localities, his long study of Indian antiquities, and his acquaintance with the coins of the period in public collections and in his own private collection, will enable him to do this much more effectually than I could hope to accomplish.

The Inscriptions are all Buddhistical, and, like Buddhist inscriptions in general, they commemorate acts of pious devotion. Some of them contain the names of the kings in whose reigns or to whose vihâras the gifts were made; and, what is of more importance, they give the dates in those old Indian numerals which have been the subject of so much study and controversy. These numerals, although pretty accurately determined, cannot as yet be said to be decisively settled; but the examples which the present Inscriptions supply will afford much help to that desirable object.

Proceeding now to the Inscriptions, those containing numerals being of the chief importance, are taken together first in order. The numbers correspond with those on the Plates.

1. Inscription on Base of a Pillar.

San XI Gri H Di H Mahâ-râjasya Râjâtirâjasya Devaputrasya Huvishkasya Vihâre dânam bhikshusya Jîvakasya Udeyanakasya kumbhako QP Sarva-hita-sukham bhavatu. Saghe chaturdase. Year 47; summer season 4th (month); day 4th. Gift to the vihâra of the great king, king of kings, son of the Gods, Huvishka by the mendicant Jîvaka of Udeyana. Base of column 25. May it be to the benefit, welfare, and happiness of all. At the fourteenth assembly.

#### 2. Base of Pillar.

Dânam Devilasya Dadhikarnna-devi-kulikasya San 🗶 7 Gri 4 Divaes 0 %.

Gift of Devila of the family of Dadhikarnna-devi. Year 47; summer season 4th (month); day 25.

Part of the last figure is defaced so that the unit is illegible. What remains seems to indicate a 5.

#### 3. Fragment. Stone Ladder.

This Inscription has been partially cut away and mutilated, the stone having been applied to a new purpose. The initial letters of the word Samvatsara (year), the word divase, followed by the numeral  $\sim$  (10), and the words asya purvvaye, dânam bhikshusya buddha sarvvasa are legible, but they do not yield any complete meaning, though the general purport of the legend is sufficiently obvious.

#### 4. Rough Slab.

Mahârâjasya Râjâtirâjasya Deva-putrasya Vâsu-devasya Samvatsara X 4 Varshamáse-prathame divase tris? Asya purvvaye talekeyam mahadatte sayamkasya vâ lenasya kuttamehe.

In the 44th year of the great king, king of kings, son of the Gods, Vasu-deva, on the 30th day of the first month of the rainy season. On this holy day . . .

This record is incomplete, and nothing can be made out of the few mutilated words at the end of the fragment. They apparently contain the names of the donors.

#### 5. Base of Pillar.

Samvatsara 🗶 1 Gri 😑 Divase 🏲 Asya purvvaye dânam bhikshusya Dharmma-devasya.

Year 47; summer season 3rd (month); day 5. Gift on this holy occasion of the mendicant priest Dharmma deva.

#### 6. Pedestal of Statue.

. . . . Mahârâjasya Vâsu-devasya San  $\omega \equiv$  Gri = Di  $\infty \varepsilon$  Etasya pûrvvaye senasya tu dattasu vagra cha vrita cha tanyabhadraka Apû maya bhada sangha-pratimâ.

(In the reign) of Mahâ-râjâ Vâsu-deva, year 83; summer season 2nd (month); day 16. (Gift) of an image on this

holy occasion by Sena????

#### 7. Fragment.

Datta stambha 20 & San X1 Va + Di ...

Presented, pillar 126. Year 47; rainy season 4th (month); day 11.

#### 8. Pedestal of a Standing Figure of Buddha.

1. Samvatsare sato panchatrisottaratame 135 Pushya-mâse divase vimshati 20. Deyadharmâyam vihârasya.

2. de vâyâ. Yadatra-punyam tad bhavatu mâtâpitroh

sarvva-satwatân cha Anuttara-jnâ-sâptaye.

3. Saubhâgyam pratirupatâ guna cha vikirtti pattakshayah Sundaratâ vibhâva-bhûva sukha-phalâni

4. Astasthâni.

In the year one hundred and thirty-five (135),  $rac{1}{3}$ , on the twentieth (20) day of the month Pushya. This votive offering to the Vihâr. May the pious action here performed tend to the welfare of my parents and all. For the acquisi-

tion of the irrefragable doctrine.

This inscription is of a later date, and is one of the most important of the series, as it gives the date in words as well as in figures. The name of the reigning monarch is not recorded. The inscription is imperfect, but, fortunately, the defective portion is apparently of no importance, as what is left of it consists only of pious aspirations. The sentence in the second line, which clearly reads "anuttara-jnâ-sâptaye," is inaccurate. Its correct wording will be found in the following inscription, but more clearly still in No. 18. It is a prayer for the avâpti, that is, the acquisition, or, as probably here meant, the spread of the "anuttara-jnâna." Inâna, or knowledge, may be translated as doctrine. Anuttara admits

of two interpretations, being either that which cannot be excelled, or that which cannot be answered.

#### 9. Well at the Kattra.

Deya-dharmâyam Yasâ-vihâre Sâkya-bhikshunyaka yana ya Yad atra punyam tad bhavatu sarvasatwatâm Anuttara-jnânâvâptaye. Samvatsarah 280.

This is a votive offering to the Yasâ-vihâra by the mendicant priest of Sâkya. . . . . May this virtuous action tend to the general good. For the acquisition of the irrefragable doctrine.

There is a faint mark following the figures 280, which may, perhaps, be the remains of the numeral 1; making the date 281.

#### 10. Base of Pillar.

Dânam bhikshusya Buddha-dâsasya Sangha-maitrasade vihâre. Sa(m)panchatrisasya satâ rahpetraivvasyavyasya.

Gift of the mendicant priest Buddha-dâsa to the Sangha-maitrasada vihâra. In the year 35? hundred??

The values of most of the old Indian numerals have been settled by the researches of Mr. Thomas, Bhâu Dâjî, and others. I lay no claim to the discovery of any of those now given, for the values of all were marked on the impressions when I received them from the hands of Gen. Cunningham. These Mathura Inscriptions confirm several of the values previously assigned, and they furnish some new and some varying forms. The following are the numerals here found:

| 3  | Ξ |   |       |      | 11  | ∘C- | - |
|----|---|---|-------|------|-----|-----|---|
| 4  | 4 | + |       |      | 20  | 0   |   |
| 5  | 7 | ħ | * * * |      | 30  | u   |   |
| 6  | 3 | E |       |      | 40  | X   |   |
| 7  | 1 |   |       |      | 80  | O   |   |
| 10 | ~ | - |       | 7.10 | 100 | 4   | 2 |

The second form of the 5 is slightly variant. The plain cross for the 40 is new, but it is a simpler form of the figure given by Bhâu Dâjî. The figure for 30 is more elaborate

on Course Low

4 2 3

UL 2 9

than the form hitherto discovered, and so is the figure for 100 used in the same inscription. In fact, the figures for 100, 30, and 5 used in this inscription would have been doubtful if the value of them had not also been expressed in words.

The remaining inscriptions are of less interest, and several of them are not given in the Plates. I append transliterations and translations so far as they are intelligible.

#### 11. Base of Pillar.

Dânam bhikshusya Buddha-ghoshasya phala . . . . Gift of the mendicant priest Buddha ghosha, the fruit.

#### 12. Base and Plinth of Pillar.

Dânam Vasu-mihira-putrasya putra madesa . . .

Gift of . . . son of Vasu mihira.

Dânam Viswa-devakasya Vasu-mihirasya Sinha putr . Imena deviddharma parityâ.

Gift of Viswa devaka Vasu-mihira

The eye copy makes the name Vasu-deva to differ slightly in the two legends, but there can be no hesitation in considering it to be the same.

#### 13. Base of Pillar.

. . . Mihirasya Sinha putra . . . Deva dharma

. . . of Mihira, son of Sinha . .

This again contains the name of the same donor as the two preceding legends, but altogether the portions legible do not furnish a complete version.

#### 14. Base of Pillar.

Dânam bhikshusya Buddha-rakshitasya Sâkya bhikshusya sa Gift of the mendicant priest Buddha-rakshita, . . . the mendicant priest of Sâkya . . .

15. Base.

Dânam Sangha . Gift of Sangha .

16. Base.

Dânam Sangha-pravirasya pu . . . Gift of Sangha-pravira son . . .

#### 17. Base.

Dânam bhikshusya Buddha-rakshitasya cha bhikshusya . . Gift of the mendicant priest Buddha-rakshita, and of the mendicant priest . . .

#### 18. Square Pedestal of Statue.

Deya-dharmo yam Sâkya-bhikshor Bhadatta Brahmasomasya. Yad atra punyam tad bhavatu sarvva-satwânâm. Anuttara-jnânâvâptaye.

The votive offering of Bhadatta Brahma-soma, mendicant priest of Sâkya. May the pious act here performed be to the benefit of all. For the acquisition of the irrefragable doctrine.

#### 19. Pedestal of Small Statue.

Deya-dharmo yam Sâkya-bhikshor Dharma dâsasya. Yad atra punyam . . . sarva-satwatânâm cha.

Votive offering of the mendicant priest of Sâkya, Dharmadeva. May this pious act, etc., etc.

#### 20. Small Stupa.

at Allahabrick

. . . nasâ puyâye Suranasya dânam. Gift of Surana.

#### 21. Base of Pillar.

Mills 359

Dânam Sangha-sthavirasya Bhadatta. Gift of the Sthavira Bhadatta.

#### 22. Base of Pillar.

. . . dandi Sangha-deva Singha-ghuta Dharma-priya Sangha-mitra Dharma-priya.

A mere string of names.

#### 23. Base of Pillar.

at Mathera

Ayam kumbhako dânam bhikshunâm Suriyasya Buddha- 4/1/352 rakshitasya cha prahanikânâm . . . ye dharmma parityâgata sarvva ba prahanikânâm Arâtya bhaktinâm ye bhavatu. . . . .

This base of a column is the gift of the mendicant priests, of Suriya and Buddha-rakshita, and of the prahanikas???

#### 24. Pedestal of Small Statue.

(De)ya-dharmo yam Sâkya-bhikshoh Sangha-rakshitasya. Yad atra punyam tad bhavatu.

Votive offering of Sangha-rakshita, mendicant priest of Sâkva. May this pious act, etc., etc.

#### 25. Back of Small Statue of Buddha.

. . . Bhagavato Sakya-munisya . . . masare vihâre dasapra. . . .

Of the holy Sakya muni . . . masara vihâra.

#### 26. Statue of Buddha.

. . . prathitam yasa gunasyâgra sarvvottamasya Dharmâsokena bhaktyâ pratikriti . . . (vi)hâre pratimâ pratikshâpitâ. Yad atra punyam tad astu mâta-pitror bhrâtrinâm.

. . . gift of an image to the Vihâra by the devotee Dharmâsoka. . . . May the pious act thus performed conduce to the welfare of my parents and brothers.

#### 27. Base of Pillar.

. . . bhikshu Sudatta Subhaga Sangha cha. . . . . This is very indistinct and incomplete.

#### 28. Large Slab.

These contain many names, and are so damaged that no connected sense can be made out. The words vihâre kakatikânâm, in the vihâra of the Kakatikas; and Sangha prakirtahi vyavâhâre hi upathâpitâye can be read.

#### 29.

This inscription is unfortunately imperfect. The stone upon which it was graven seems to have been very cleanly cut through, and the first part of it carried off. There can be no certainty as to how much has thus been lost, but probably very little. The following is a transcription:—

. . . swâmisya mahâ-kshatrapasya Şândâsasya Gajavarena Brahmanena Sangrava-sagotrena.

. . . rani. Imâ jâyamada pushkaranainâm paschimâ pushkaranim udapâno ârâmo stambhah.

h. U 364

Part of the inscription being lost, it is not possible to give a translation, but its general meaning is sufficiently manifest. It records (a gift) by the brahman Gaja-varena of the Sangrava gotra in the time of the great Satrap Sândâsa, (lieutenant) of the lord paramount (swâmi). . . . The gift appears to have consisted of tanks called Jâya-mada, a western tank, a well, a garden, a pillar; but in the absence of a verb no definite meaning can be attached to the words. The absence of this part of the inscription is of no consequence, but it would be interesting to see who was the swâmi or lord paramount of the Satrap Ṣândâsa.

The language of all the inscriptions is Sanskrit, not Pâli, but it shows some interesting deviations from the classical forms. For Râjâdhirâja we find Râjâtirâja, but this may be an unusual though legitimate form, the preposition ati being used instead of the commoner adhi. The word bhikshu in a few instances has its proper genitive form bhikshoh, but it generally appears as "bhikshusya," following the declension of the much more numerous class of nouns in a. Muni, in the only instance in which it appears, has similarly the genitive "munisya," instead of the proper form muneh. The word vihâre appears in the locative form where the dative might be expected, showing a leaning to the Prâkrits, which reject the dative.

The seasons of the year are used for the purposes of dates. Some instances of this use are given by Bhâu Dâjî from the Western Caves. These inscriptions show that the division of the year into three seasons was the one employed.

PS.—Some months after the preceding notes had been read before the Society, I received from Bâbû Râjendra Lâl a copy of a paper on several of the same Inscriptions which he published in No. II. of the Journal of the Asiatic Society of Bengal for 1870. His Essay and mine, therefore, represent two entirely independent investigations of the same set of Inscriptions. As the Bâbû's paper arrived before this had been set up in type, I take the opportunity of

making a few remarks upon some parts of it, which seem

open to objection.

The translations of the Inscriptions are generally in accordance, but there are several important points of difference. I have weighed the Bâbû's readings very carefully and candidly, but in no case have I felt constrained to surrender my own versions.

General Cunningham in his note following this has remarked upon the Bâbû's very incorrect rendering of the numerals, which are the most valuable portions of the Inscriptions. I may say at once that I give up the Bâbû's renderings as beyond my understanding. The "40th day of the year 59," and "the 80th day of the year 59," are forms of dates which are new to me, and for which I can find no warrant in the Inscriptions. Though the Bâbû shows that he is acquainted with Bhâu Dâjî's investigations of the Inscriptions in the Western Caves, where the Seasons of the Year are employed in the dates, he has failed to perceive that the same custom is observed in these Inscriptions. So, the following difficulty is encountered. The word varsha means both year and rainy season, but the applicability of the latter sense not having been seen, the Bâbû explains the sentence in which it occurs, and which begins with the distinct word samvatsara (year), by saying varsha "is used very much in the same way as if a man were to say 'in the year 44 Anno Domini.'"

Another reading of the Bâbû's is most important if it could be substantiated. He reads in one Inscription the date "140th Saka year," and thereupon proceeds to argue that the Saka was the era employed. If this could be proved, it would have a most important bearing on Hindu Chronology. I failed to perceive either the word or the figures in the paper impression of the inscription; and on referring to the Bâbû's engraving, I find the word which he reads Saka, to be written with the dental s (N), not, as it ought to be, with the palatal s (N). This is fatal to his reading. Further, the word so read follows the word dânam, intervening between that and what is evidently part of the donor's name. No

date could be inserted in such a position. I have no doubt whatever that these obscure letters are parts of the donor's name or title.

The Bâbû, while stating the inscriptions on the pillars to be records of gifts, raises the question "whether in the case of inscriptions, recording gifts (dâna) without specifying their nature, they are to be taken as mere records of gifts, or of the gift of the objects on which they occur." He then goes on to say, "Gen. Cunningham is in favour of the latter alternative... There is generally, however, no pronoun of any kind in such inscriptions to fix such a meaning, and it often happens, that a single bar of a railing records two or three or more gifts of a different date, each in the usual form of gifts of so and so." He then notices the Inscription No. 12, in which the inscription on the base says, Gift of so and so, and that on the plinth, Gift of some one else. A single railing bearing records of several gifts of different dates has never come under my notice; but, dealing with the Inscriptions before us, there seems to be no reason why two persons, naturally or spiritually related, might not agree to contribute separate parts of a column. The Bâbû's reading of this short inscription is rather different from mine. I find that the two donors are connected by a common patronymic Vasu-mihira. What can the words "Gift of," inscribed upon a pillar or anything else, mean, unless it be that the object so inscribed is the thing given? If we find a stained window inscribed "Gift of -," do we understand that something else was given, not the window? It might have been convenient to make records of gifts on pillars, railings, or other conspicuous objects; but, unless the object inscribed were the one presented, some mention would undoubtedly have been made of what the gift really was. The earliest researches of Prinsep showed the gift of a pillar to be a favourite act of Buddhist devotion, and two of these Inscriptions (1 and 23) distinctly state the base of the pillar to have been the donation. The Bâbû seems not to have been aware that the word kumbha or kumbhaka,1 has "base of a pillar" among its other meanings;

<sup>1</sup> See Bothlingk and Roth.

and so in Inscription No. 1, he has read kumbhako 25 (base of pillar 25) as kumbhaka-sanjna, which he translates "breath suspended," and applies it as an epithet to the donor.

To the Inscriptions from Mathura the Bâbû has added one obtained by General Cunningham from Sâhet Mâhet which place the General identifies with the Srâvasti of the Buddhist records. This Inscription General Cunningham has introduced at the end of Plate III., and I now proceed to offer a transcription and a suggestive translation. Bâbû Râjendra has done the same before me, and we agree in some words; but as he considers the "document very puzzling," and "the translation a mere guess," I refrain from quoting his version. General Cunningham himself, in his Report, gave readings of the names and other portions of the Inscription, including the name of Srâvasti in the second line.

Etaye purvaye bhikshusya Pushpa . . . sya Saddhyâ Mihirasya bhikshusya Bapusya Trepitakasya dânam. Baddhisatwo châtram *dânosru* sâvastiye bhagavato chankame. Kosumba kutiye Achayyâno sarvasti dinam parigrahe.

Such is the transliteration of the Inscription as it appears in the engraving. The commencement is wanting, but there are traces of figures, one of which seems to be 10. I have not had the advantage of seeing the impression, or it is possible I might have detected some rudimentary signs which would justify the reading of Bodhisatwo instead of Baddhisatwo and Srâvasti instead of Sâvasti, etc. The engraving is much superior to that accompanying Bâbû Râjendra's paper, but the letters in italics remain uncertain after a comparison of both. In the Bâbû's copy an additional letter ta appears between sarvasti and dinam.

I am unable to extract any continuous sense out of this legend. The first part records the fact of the statue being the gift of the mendicants—Mihira and Bapu Trepiṭaka. After this follows the word Baddhisatwo for Bodhisatwa, and the word chhâtram, disciple in the accusative case. There is no verb, however, to govern this accusative, and so the dot representing it may possibly be an accidental addition. Next comes a doubtful word, then sâvastiye bhagavato chan-

kame. This may mean that the donors were disciples of the bodhisatwa, and their donation was made to the holy chankama, whatever that was, at Srâvasti. In the following line, kosumba-kutiye, may be translated as "to the flowery dwelling," which is probably the name of the temple. This last sentence probably means, "For the regular use of the disciples of the âchârya (teacher) at the Kosumba-kuti."

The language of this Inscription bears strong signs of the transition from Sanskrit to Pâli. The compound letters of the Sanskrit keep their place, but besides the genitive bhikshusya, we have satwo and bhagarato followed by a hard consonant, and the dative forms sarastiye and kutiye.

## Note on the preceding Mathura Inscriptions.—By Major-General A. Cunningham.

The circumstances under which these inscriptions were discovered are detailed in my Archæological Report for 1862-3, par. 159-184.

Professor Dowson's translations were handed over to me in the end of April last, and I read them at a meeting of the Royal Asiatic Society on the 5th of July, just four months before the receipt of Bâbu Râjendralâl's translations, which appeared in the Bengal Asiatic Society's Journal for 1870, p. 117-130. But the Bâbu's translations are confined to the inscriptions which I first made known to Mr. E. C. Bayley in November or December, 1860, by the copies which are now engraved in the Bengal Journal. Mr. Bayley visited Mathura early in April, 1861, and made independent copies of most of these inscriptions; and in 1863 a considerable number of the inscribed stones were forwarded to Calcutta, where Bâbu Râjendra had the opportunity of studying them at leisure. The Bâbu mentions that the inscriptions which he has translated are taken from my transcripts, "with such corrections and emendations as a careful examination of the

original and comparison with Mr. Bayley's transcripts would warrant." As a single specimen of the nature of the corrections and emendations effected by Bâbu Râjendra, after this careful examination of my transcripts, I need only refer to the first inscription, in which the vowel â in râjatirâja, and the compound letter sya in bhikshusya, both of which were accidentally omitted in my hurried transcript sent to Mr. Bayley, are also omitted in the present Calcutta transcript, which the Bâbu professes to have corrected and amended from the original. The only alteration which he has made is in the final letter s, which he has changed to t, although he reads it as s.

The Plates of these inscriptions, which accompany the present translations by Professor Dowson, have been reduced by photography from paper-impressions of the originals. About one-half of these inscriptions, including several of the most important, were discovered by me in 1862 and 1865, and were unknown to Bâbu Râjendra. Amongst these new inscriptions is one (No. VI.) of Maharâja Vâsudeva, dated in the year 83; the previously discovered inscription of the same king (No. IV.) being dated in the year 44. No. VIII. inscription is of special value, as the date, 165 Samvat, is given in writing as well as in figures. No. XXIX., which is the earliest inscription yet found at Mathura, belongs to a Satrap named Sandâşa, of whom I possess several coins. This inscription is probably as early as B.C. 100. Inscriptions XXX. and XXXI. are simply the numbers 118 and 127.

In the translations of these inscriptions, Professor Dowson has adopted, without a single alteration, the whole of my readings of the dates, which I communicated to him at the rooms of the Royal Asiatic Society, where I met him by appointment, for the purpose of making over the paper-impressions of the inscriptions. My readings of the dates had long before been noted on these impressions. I mention this fact because, at the end of the translations, Professor Dowson states that the values of most of the old Indian numerals have been settled by the researches of Mr. Thomas, Bhâu Dâjî, and others. Of how little assistance this "settle-

ment" of the numerals has been in the case of the Mathura inscriptions, may be seen on comparing Bâbu Râjendra's readings of the dates with my readings now given by Professor Dowson.

I do not presume to offer any verbal criticism on the translations of these two well-known scholars; but I may note a single misreading into which both of them have fallen. It is in the last word of No. I. inscription, which should be *chatur-dise*, "in the four quarters," and not *chatur-dase*, "the fourteenth."

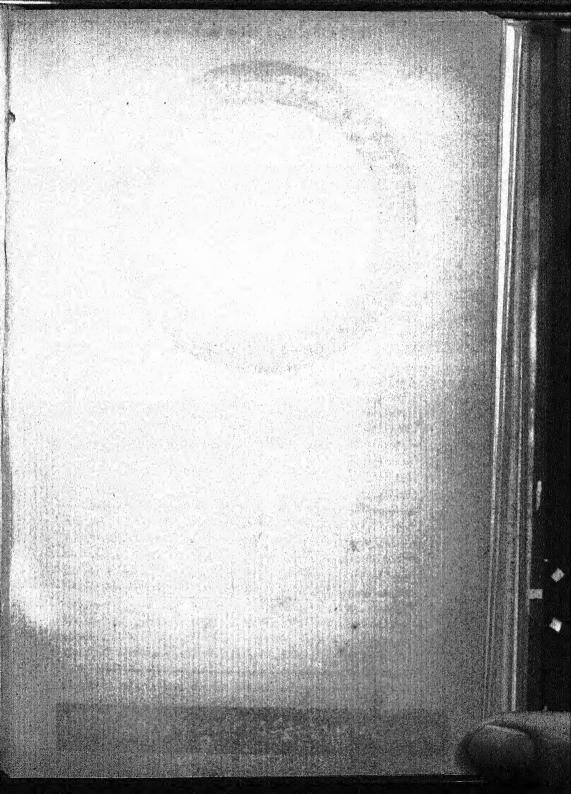

Unfortunately, I am so pressed for time by my approaching departure for India, that I cannot do more than offer a few words on the historical importance of these inscriptions. In No. I. we find that Mathura possessed a Vihâra of the great king Huvishka, whose name is also found in the Aryan Pali inscription of Wardak, near Ghazni, and who is no doubt the Hushka of the Rajatarangini and the Overke of the Indo-Scythian coins. In this inscription therefore we have proof of the accuracy of the Chinese accounts of the Turushka Indo-Scythians, that they had conquered the whole of Northern India. Nos. IV. and VI. belong to king Vasudeva, who takes the title of Deva-putra, which is given to Kanishka in the Bahâwalpur Tope inscription. His dates of 44 and 83 show that he enjoyed a long reign, which we learn also from the abundance of his coins. The name is written BAZO-△HO in corrupt Greek both on the gold and copper coins, and this reading is confirmed by a few of the gold coins which also bear a part of his name in Sanskrit characters, Vâsu, written perpendicularly, as on the wellknown coins of the Guptas. From the pure Hindu name of Vâsudeva, we might suppose that he was a Hindu; but as the coins give him the well-known tribal title of Korano, which was borne both by Kanishka or Kanerke, and by Huvishka or Hoërke, it seems certain that Vâsu-deva, in spite of his pure Indian name, must have been an Indo-Scythian. If so, may we not suppose that the descendants of the Indo-Scythians gradually became Indianized, and that they must now be sought for amongst some of the inferior

tribes in the North-West, such as the Jâts and Gujars, with whom I have already proposed to identify them?

I will conclude these remarks by referring the reader to the Samudra Gupta inscription on the Allahabad Pillar, in which the king, after mentioning the Sakas, speaks of the Devaputra Shahan Shahi, who must therefore have been the Turushka king of the Panjâb. This has an important bearing on the age of the Guptas, as it makes Samudra Gupta a contemporary of the Turushka kings, whose dominion, according to the Chinese authorities, had already passed away in the beginning of the third century after Christ.

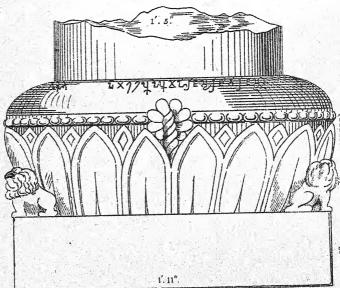

The dates in these inscriptions I refer to the era of Vikramâditya, as we know that both Kanishka and Huvishka preceded the establishment of the Saka era. Vâsudeva's reign would therefore have extended from B.C. 13 to A.D. 26, and his coins were the immediate precursors of those of Ghatal Kacha, the father of Chandra Gupta I., who probably reigned

from A.D. 50 to 75.

### THE ROYAL ASIATIC SOCIETY.

ART. XI.—Specimen of a Translation of the Adi Granth. By Dr. Ernest Trumpp.

In offering to the learned public a specimen of a translation of the Adi Granth (or first holy book of the Sikhs), we premise a few words on the language in which that work is composed, as hitherto wrong notions have been entertained on this point. The language of the Adi Granth is not the old Hindí, as has been recently stated, if the old Hindí (if it may be called so) is taken identical with the Hinduí, the language of the middle age of India, from which the present Hindí has sprung, and which is now nearly extinct. Even the learned Garcin de Tassy was of opinion that the Adi Granth was written in Hinduí, but he had apparently not paid any attention to the study of this work, and his statement can, therefore, be only a surmise.

The language in which the Âdi Granth is composed we would propose to call the old Gurmukhi, for it is in reality the mother of the modern Gurmukhi, and it differs as much from the Hinduî (the term "old Hindi" we will discard, to avoid misconceptions) as the modern Gurmukhî differs from the Hindi. It is true there is a close relationship between the old Gurmukhî and the Hinduî, especially in the nomenclature; but the grammatical forms, on the other hand, differ so much, that they can hardly be identified, as little as the modern Gurmukhî can be classed under the Hindî. We will not enter into details here to prove our assertion; for

<sup>&</sup>lt;sup>1</sup> Garcin de Tassy: Rudiments de la langue Hindouî, p. 4, note 5.

every one who has read the Hindui compositions, as contained in Garcin de Tassy's "Chrestomathie Hindie et Hindouie," will perceive at once the difference. We will only adduce a few striking points of difference between the old Gurmukhî and the Hinduî: The old Gurmukhî has a regular Passive voice (like the Sindhî), the Hinduî only the compound Passive voice; the whole conjugation of the old Gurmukhî differs considerably from that of the Hinduî; the old Gurmukhî uses pronominal suffixes with the verbs,1 especially the past participle, which is quite unknown in Hinduî, but current in Sindhî. As regards the declensional process, the old Gurmukhî has, like the Sindhî. a regular Locative, Ablative, and Instrumental (plur.) case, which are not to be found in Hinduî. Besides the (adiectival) Genitive case sign an, an, etc., we find already the modern Gurmukhî form हा, ही. The idiom which stands nearest the old Gurmukhî is not the Hinduî, but the Sindhî: in fact, without a knowledge of Sindhî the old Gurmukhî cannot be understood at all. We allow that also specific Hinduî forms are to be met with in the Adi Granth; but we have no doubt that such like forms point to a later origin, and are to be considered as interpolations. The matter is quite different with the Dasvê pâtsâh kâ granth, the composition of Govind Singh; this work is (with the exception of the Persian portion) written altogether in Hindui. language of the Adi Granth is now totally antiquated, and may be considered as dead, for the Sikhs themselves, when quoting a passage from the Adi Granth, add a regular translation.2

<sup>&</sup>lt;sup>1</sup> And even with nouns; examples of this kind are even found in the MSS, of the Âdi Granth.

² Very important in this respect is the work printed at Ludihânâ (Loodiana), A.D. 1868, and composed by Pandit Sardhâ Râma, under the title सिखां दे राज दी विधिन्ना, history of the Sikh power. It gives various passages from the Âdi Granth, with a translation, from which we may see that even the learned Sikhs frequently misinterpret the words of the Âdi Granth, and are not always sure of the meaning of difficult words and passages.

The translation offered here we would only call a first attempt; for we had only the manuscripts before us, without any commentary or any other help whatever. There is neither a grammar nor a dictionary of the old Gurmukhî, and we had to find out the different grammatical forms by mere comparison with the Sindhî, Hinduî, and the modern Gurmukhî. Besides the difficulties arising from the more or less unknown or doubtful grammatical forms, the manuscripts, without exception, are written in such a way that all the words in a line are joined together, so that it is often difficult to separate the words, as occasionally, as a letter more or less may be added or cut off, the sense will become quite different. We trust, however, that these and other difficulties will be speedily overcome, when we shall have the assistance of a learned Sikh priest in India.

For want of Gurmukhî types, we have made a literal transcription in the ordinary Devanâgarî character.

# श्रीं सित नामु करता पुरखु निरभउ निर्वेष स्रकालु मूरित स्रजूनी सैभं। गुर प्रसादि॥

Om! The true name is the Creator, the (supreme) Being without fear, without enmity; having a timeless form, not subject to transmigration, self-existing. By the favour of the Guru!

अजूनी may be translated either: not subject to transmigration, or free from birth = unborn (Sansk. योचि, with a privat.) सैभे (saibham); in older MSS. the form सैभू is found, which is more correct; Sansk. खंभू, the self-existing.—गुर् प्रसादि in or by the favour of the Guru; प्रसादि is the Locative of प्रसाद. By गुर् God is understood, and it is a misinterpretation if the word has afterwards been applied to a human Guru.

॥ जपु ॥ १ श्रादि सचु जुग श्रादि सचु । है भी सचु नानक होसी भी सचु ॥ सोचैसोचि न होवई जे सोची जख वार । नुपैचुप न होवई जे लाइ रहा लिव तार। भृष्विचा भुख न उतरी जे बंना पुरीचा भार॥ सहस सिम्राण्या लख होहित द्वान चलै नालि। किव सचित्रारा होई त्रे किव कूड़े तुटै पालि। इकिम र्वाई चलगा नानक लिखित्रा नालि॥

Japa.

First is truth; from the beginning of the world is truth. There is truth, (says) Nanak, and there will be also truth. By meditation (and) meditation it is not obtained, though thou meditate a hundred thousand times.

By silence (and) silence it is not obtained, though I keep

up a continual devotion.

The hunger of the hungry does not cease, though I make a load of fried cakes.

There may be a thousand, a hundred thousand dexterities, not one will go with (thee).

How may one become a man of truth (and) how is the wall of falsehoods broken?

Nânak (says), Walking in (his) commandment (and) will is written with (every living being).

सचु is substantive and adjective, truth and true; in which ever way it be taken, it refers to God. सोचै सीचि by meditation (and) meditation, i.e. by continual meditation. सोचै is quite identical with सोचि, as it is sufficiently proved by a number of words. Instrum. plur., चुपु being also used in the plur., as in many other passages of the Âdi Granth. चित्र s.f. Devotion; নাৰ্ s.f. a continued line (of) = continual. মুল্লিয়া মুল্ল the hunger of the hungry, etc. The connexion is: As a man can never entirely satisfy his hunger, but becomes always hungry again, so a man can never find out truth ( = God) by his own exertion. The Sikh traditional explanation (संप्रदाय) differs from the translation given above; they explain पुरी (which we take to be identical with uti) by city, and AIT by multitude, but neither can be proved by the Bhakka, besides that it gives no proper sense. होई ब्रे is a passive form, applied in a neuter sense, it may be become; this is borne out by a great many passages of the Adi Granth. पालि s.f. properly a layer of stones or bricks = wall. इवसि is the Locative sing. If it is man's destiny (बेंखु) to walk in the commandment and will of God; it is not his option.

2

जनमी होविन जातार जनमु नहिजा नाई।
जनमी होविन नीच जनमि मिलै विड्याई॥
जनमी होविन नीच जनमि निषि दुख मुख पाईचिह॥
इनमी जनमी वखसीस इिन जनमी सदा भवाईचिह॥
जनमै चंदरि समुनो वाहरि जनम न नोइ।
नानन जनमें ने वृद्धै तहन मै नहें न नोइ॥

2.

By (his) orders forms are made, (but) the order cannot be told. By (his) orders living beings are made, by (his) orders greatness is obtained.

By (his) orders are the high (and) low, by (his) orders pain (and) comfort is set down (= decreed).

By (his) orders is the forgiveness (pardon) of some, some are by (his) orders always made to wander about (in transmigration).

Every one is under (his) orders, outside (his) order is none. Nânak (says): if one understand (his) orders, he will not speak in pride and self-conceit.

इनमी, the Instrum. plur. होवनि आकार forms are made, i.e. things, etc. are created. इनमि मिले विद्यादि by his orders greatness is obtained, nearer explained by the following पद. इनमि is the same as इनमी, the vowels being lengthened or shortened according to the requirements of the metre. लिख पाई यहि is written down (by destiny); पाई यहि is the well-known passive voice of the old Gurmukhi, still in use in the modern Gurmukhi (पाईए). इनमे जे बुद्दी if he understand (his) orders; इनमे is the Format. plur., the postposition कर (kau) being left out for the sake of the metre. इन में (properly इन्ने में), pride and conceit, egotism.

३ गानै को ताणु होने किसे ताणु। गानै को दाति जाणै नीमाणु॥ गाव को गुण विष्याई आचार।
गाव को विदिशा विखमु विचार॥
गाव को साजि करे तनु खेह।
गाव को जीय के फिरि देह॥
गाव को जाप दिमे दूरि।
गाव को वेखे हादरा हदूरि॥
कथना कथी न आव तोटि।
कथि विथ कथी कोटी कोटि कोटि॥
दे दादे के दे थिक पाहि।
जुगाजुगंजरि खाही खाहि॥
इकमी इकमु चलाए राइ।
गानक विगसी वेपरवाइ॥

3.

One sings (his, i.e. God's) power, (if) he has power (so to do). Another sings (his) liberality, (if) he knows the destiny. Another sings the beautiful praises of his excellence. Another sings a difficult thought of science. Another sings: having made the body he reduces it to ashes. Another sings: having taken life he restores it again. Another sings: he appears, (or) is seen afar off. Another sings: he sees in the presence of the present. The telling of stories does not come to an end. The stories, stories, stories are crores, crores, crores. He continues giving, the receivers get tired. For ever and ever they go on eating. The ruler goes on executing (his) orders. Nânak (says): he expands without concern.

होवे निसे ताणु, if one has power, i.e. to sing his power. दाति the liberality or munificence of God, by which he supports all creatures. नीसाणु is explained by the Sikh commentaries as identical with चेतु destiny, fate; the allotment which God bestows upon the creatures; he who knows that all gifts come by God's allotment, sings his liberality. जाप he is seen (i.e. he is near and to be seen); others again say: he is seen afar, i.e. he is afar off. चेते हादरा हदूरि he sees in the

presence of the present, i.e. he is everywhere present, wherever a man may be. ज्या जयी the telling of (all these various) stories, or the rehearsal of them. तीटि त्राउणा to come to an end. जनमी is explained by the Sikh commentaries to signify one who gives an order, a ruler, contrary to the now received meaning of जनमी obedient to an order. But जनमी might also be taken as Instr. plur., he continues executing his orders (simply) by his orders, i.e. if he gives an order, it is done at once. राज = रहे a Hinduî form, with a lengthened, for the sake of the rhyme.

ሂ

साचा साहिनु साचु नाइ भाखित्रा भाउ त्रपार।
त्राखिह मंगहि देहि देहि दाति नरे दातार।
फेरि नि त्रगै रखीत्रै। जितु दिमै दरवार।
मुहौ नि नोलणु नोलीत्रै जितु सुणि घरे पित्रार।
त्राम्मत नेला सचु नाउ निज्ञाई नीचार।
करमी त्रानै कपड़ा नदरी मोखु दुत्रर।
नानक एनै जाणीत्रै सभु त्रापे सचित्रार।

4.

True is the Lord, of a true name, (But) the import of (this) language is infinite. They say and beg: give, give!
The Liberal gives presents.
What may again be put before (him)
By which his court may be seen?
What word may be spoken by the mouth,
Which having heard he may bestow love?
Early reflect on the greatness of the true name.
From (his) beneficence comes clothing,
From his (merciful) look the gate of salvation.
Nânak (says): Thus it is known,
That he himself is altogether truthful.

साचु नाइ Locative, as in Sindhî, denoting the quality of a true name, literally, in a true name. भाखिआ भाउ अपार may be translated in <sup>1</sup> ai is generally rendered as well in Gurmukhî as in Hindî by श्रे instead of  $\hat{\mathbf{U}}$ .

different ways; the Sikhs themselves do not know what to make of it. We have given that translation which seemed best suited to the context. मही = महीं (the anusvâra being constantly left out in the Granth), an old Ablative form—from the mouth. जित् = जित् (= जिस्) कर, which (Acc). पित्रार्घरना to bestow love. त्रमृतवेला s.f. the early hours of the day (i.e. the nectarious time). जरमी Abl. sing. (र्) from (his) benevolence. नदरी Abl. sing. (नदरि = ) ), the merciful sight or look of God. समु is here taken adverbially: in all, thoroughly, altogether.

ч

यापित्रा न जाइ कीता न होइ।

त्रिप त्रापि निरंजनु सोइ॥

जिनि सेवित्रा तिनि पाइत्रा मानु।

गुरमुखि नादं गुरमुखि वेदं गुरमुखि रहित्रा सभाई।

गुर ईसक् गुक् गोरखु वरमा गुक् पारवती माई।

जे हुउ जाणा त्राखा नाही कहणा कथनु न जाई।

गुरा इक देहि बुझाई।

सभना जीत्रा वा इकु दाता सो मै विसरि न जाई॥

5.

He cannot be appointed, (for) he is not made;
He himself, himself is the Supreme Being.
By whom he is worshipped, he receives honour.
Nanak (says): (If) the abode of virtues be praised;
(If) he be praised, heard, and revered in the heart;
He, having taken away pain, will bring comfort to the house.
In the mouth of the Guru is the sound.
In the mouth of the Guru is the Veda,
In the mouth of the Guru it has been continually contained.

Îsaru is Guru, Gôrakh is Guru, Brahmâ is Guru, and the mother Pârvatî.

If I would know (him), I would say (it);

(But) the story cannot be told.

O Guru! let me know the only One!

That the one liberal (patron) of all living beings may not be forgotten by me!

थापण v.a. To appoint, to establish (as a king, etc.). निरंजन an epithet of God (the passionless). गावीचे etc., If he is praised. In a conditional sentence the conjunction of is generally omitted, and must be gathered from the context. गुणी निधान the abode of virtues (गुणी = गुणें or गुणां), an epithet of God. मनि रखी से भाउ, literally, if reverence be kept in the heart, i.e. if he be revered in the heart. ग्रम्खि in the mouth of the Guru. नाई nådam, for the sake of the rhyme, instead of नाट. An old Sikh commentary (without the name of the author), gives the following explanation of नाइं etc.: अंगदा एड राग ज है स गुरु है। वेद ज है सो गुरु है गुरुमुखि समाद रहित्रा है, i.e. O Angad! (the disciple of Nanak and second Guru) this song (which Nânak was pronouncing) is Guru; the Vêda is Guru, it has been continually contained in the mouth of the Guru. Then the commentary proceeds: ईसर ज़ है सु गुर है गोर खु ज़ है सु गुर है बहमा ज़ है सो गुरु है पार्वती जो है सो गुरु है ॥ बचा एहि छिइ गुरु हैनि, i.e. Îsaru is Guru, Gôrakhu is Guru, Brahmâ is Guru, Pârvatî is Guru; o son, these six are Gurus. The commentary does not seem quite to have hit the right meaning. The sense of these words is, according to our interpretation, rather this: that there are many Gurus, who teach always the Vêda; that there are many followers of Îsar (i.e. Siva), of Gôrakh (Vishnu), of Brahmâ, of Pârvatî, but they do not know the only one, whom even he himself (i.e. Nanak) did not venture to describe. To that a disciple (according to tradition, Angad), answers: o Guru! teach me the only one!

ફ

तीरिष नावा जे तिमु भावा विणु भाणे किनाइ करी। जेती सिरिंठ उपाई वेखा विणु करमा कि मिले जई। मित विचि रतन जवाहरि माणिक जे इक गुर की मिख सुणी॥

# गुरा इक देहि बुझाई। मभना जीचा का इकु दाता मी मैं विसरि न जाई॥

6.

I bathe at a Tîrath, if I please him;
Without the will of God what shall I do with bathing?
As much as I see created, what, without destiny, is found that I may take?

In (my) instruction there is a gem, a jewel, a ruby, If thou hearest the teaching of the one Guru.

O Guru! let me know the only One!

That the liberal patron of all living beings may not be forgotten by me!

विणु भाणे without (his) will, i.e. if it does not please God, if God is not merciful to me. करीं = करां I may do. सिर्डि s.f. creation (Sansk. मृष्टि). विणु करमां without destiny. करम in the sense of destiny is always used in the plural, denoting properly the works (of a former life), which determine the fate in afterbirths. कि मिले लई what is found, that I may take? लई = जवां.

6

जे जुग चारे आरजा होर दमूणी होइ।
नवा खंडा विचि जाणी श्रे नालि चले समुकोइ॥
चंगा नाउ रखाइके जसु कीरित जिंग लेइ।
जे तिसु नदिर न आवई त वात न पुक्ट केइ॥
कीटा अंदिर कीटु किर दोसी दोसु धरे।
नानक निरगुणि गुणु करे गुणवंति श्रा गुणु दे।
तेहा कोइ न सुझई जिति सुगुणु कोइ करे॥

7

If (one's) age last the four periods of the world, or even tenfold more;

If he be known in the nine regions, if every one follow him; If, having preserved a good name, he obtain fame and celebrity in the world;

If he does not come into (his) favour, nobody will ask a word about him,

Among the worms having made him a worm, he puts the sins on the sinner.

Nânak (says): he bestows favour on the wicked, he bestows favour on the virtuous:

Such a one is not to be seen who could bestow any favour on him.

नवां खंडां विचि in the nine regions (of the earth), i.e. in the whole world. गुणु करणा to bestow favour.

7

सुणिकै मिध पीर सुरिनाथ।
सुणिकै धरित धवल काकास॥
सुणिकै दीप लोक पाताल।
सुणिकै पोहि नस कै कालु॥
नानक भगता सदा विगासु।
सुणिकै दूख पाप का नासु॥

8.

Having heard (his word), the Siddhs, Pîrs, and Gods (are). Having heard, the earth, the bull, and the sky. Having heard, heaven and hell. Having heard, death cannot affect (them). Nânak (says): (his) worshippers are always joyful; Having heard, (there is) annihilation of pain and sin.

सुणिन्ने, Locative of the past participle, it having been heard (by them); to supply is, his word or name. धवन the Sikhs explain by the bull, who is said to support the earth (else the white elephant).

ए मुणित्रे ईसर वरमा इंदु। सुणित्रे मुखि सलाहण मंदु॥ सुणिये जोग जुगित तिन भेदु। सुणिये सासच सिम्नित वेदु॥ नानक भगता सदा विगासु। सुणिये दूख पाप का नासु॥

9.

Having heard, Îsar, Brahmâ, Indra.
Having heard, (there are) in the mouth the mantrs of praise.
Having heard, the skill of Jôg, in the body the secret.
Having heard, the Shâstrs, the Smriti, the Vêdas.
Nânak (says): (his) worshippers are always happy.
Having heard, (there is) annihilation of pain and sin.

देसक, etc., the Hindû Gods are acknowledged by Nanak, but only as Dii minores, created by the Supreme Being. स्थित्रे सुखि साचाहण संदु, having been heard, there are in the mouth the mantrs of praise; the Hindû holy scripture is thereby acknowledged as of divine origin. संदु = मन्त्रं mantram. जोग जुगति the skill of Jôg, as being brought into a system by the Jôgîs. ति सेंद्र the secret in the body, i.e. in whose body the secret (of Jôg) is, by means of penances, austerities, etc., to which they subject their body.

90

सुणियै सतु संतोखु गियानु ।
सुणियै यठसिठ का इसनानु ।
सुणियै पिड़ पिड़ पावहि मानु ।
सुणियै लागै सहिज धियानु ॥
नानक भगता सदा विगासु ।
सुणियै दूख पाप का नासु ॥

10.

Having heard, truth, contentment, knowledge (of God). Having heard, the bathing of the sixty-eight (tîrthas). Having heard, they obtain honour by reading and reading. Having heard, they gladly apply themselves to meditation. Nânak (says): (his) worshippers are always joyful. Having heard, there is annihilation of pain and sin.

सतु s.m. truth, etc. Nanak acknowledges that there is (some) truth and knowledge of God in the Hindû Shastrs; also the bathing at the sixty-eight tîrthas is referred to divine origin, etc.

99

सुणिचै सरागुणा के गाह।
सुणिचै सेख पीर पातिसाह॥
सुणिचै चंधे पावहि राजः।
सुणिचै हाथ होवै चसगाङ॥
नानक भगता सदा विगासु।
सुणिचै दूख पाप का नासु॥

11.

Having heard the (panegyrical) songs of the Avatârs. Having heard, Shêkhs, Pîrs, and Kings. Having heard, the blind ones find the road. Having heard, the bottomless (water) becomes shallow. Nânak (says): (his) worshippers are always joyful. Having heard, (there is) annihilation of pain and sin.

सर्गुणा के गाह is very difficult to explain. सर्गुण is very likely = सर्गुण (सर्वेगुण), possessing all qualities, an epithet of an Avatâr. गाह m. a panegyrical song of praise. हाथ s.m. here in the sense of a cubit; ऋसगाह adj. bottomless; unfathomable; the unfathomable (water) becomes a cubit (deep) = shallow.

92

मंने की गति कही न जाइ।
जे को कहै पिकै पकुताइ॥
कागदि कलम न लिखणहार।
मंने का यहि करनि वीचार॥
श्रैसा नामु निरंजनु होइ।
जे को मंनि जायी मनि कोइ॥

12.

The state of him, who minds (him), cannot be told. If one tells (it), he repents of it afterwards. There is not paper (enough), nor pens, nor writers. Sitting they reflect on him, who minds (him). Such is the name of the Supreme Being. If one minds (him), he knows (him) in his mind.

मंने = मन्दे (mandé), another form of the present participle is मंग mannâ, instead of मनदा mandâ. गति s.f. State; it may also signify salvation, which would equally suit the context. चैसा नाम, etc.; the sense is, the name of God is such, that only he knows him, who minds (or obeys) him. The state of him who minds God cannot be described, as he himself alone knows it, and nobody else. Nowithstanding this assertion, Nânak describes to some extent the state of him who minds God, in the following paurîs.

93

मंने सुरति होवे मिन बुधि।
मंने सगल भवण की सुधि॥
मंने मुहि चोटा ना खाइ।
मंने जम के साथि न जाइ॥
श्रीसा नामु निरंजनु होइ।
जे को मंनि जाएँ। मिन कोइ॥

13.

If he minds (him), there arrives intelligence and wisdom in the mind.

If he minds (him), the knowledge of the whole world. If he minds (him), he is not struck in the face. If he minds (him), he does not go with Yama. Such is the name of the Supreme Being. If one minds (him), he knows him in his mind.

मुहि चोटा न खार्, an idiomatic expression—to be struck in the face. जम नै साथि न जार् he does not go with Yama, i.e. he is not subject to death (and pain), he will be united with the Deity.

98

मंने मार्गि ठाक न पाइ।
मंने पित सिउ पर्गटु जाइ॥
मंने मगु न चले पंछ।
मंने घरम सेती सनवंधु॥
श्रीसा नामु निरंजनु होइ।
जे को मंनि जांथी मनि कोइ।

14.

If he minds (him), he is not stopped on the road. If he minds (him), he becomes known with honour. If he minds (him), he does not go proudly his way. If he minds (him), he gets connected with virtue. Such is the name of the Supreme Being. If one minds (him), he knows him in his mind.

ठाकि पाउणा to be stopped. पति सिउ परगरु जाइ he becomes known with honour, i.e. at the threshold of God. संगु adj. proud (Sindhi).

94

मंने पाविह मोखु दुआह मंने परवारे साधाह ॥ मंने तरे तारे गुर सिख। मंने नानक भविह न भिख॥ श्रेसा नामु निरंजनु होइ। जै को मंनि जाएँ मनि कोइ॥

15.

If he minds (him), he finds the gate of salvation.

If he minds (him), he is his family's support.

If he minds (him), he is saved, and he saves (also) the disciples of the Guru.

If he minds (him), he does not wander about in begging, says Nânak.

Such is the name of the Supreme Being. If one minds (him), he knows him in his mind.

साधार s.m. Support; the same as आधार. The Sikh commentary explains it by जे परमेसर्जी का नामु सुणि करि मंने ता परवार साधार होवे॥ उस के पीके सारा उसका परवार उधरे; i.e. If he, having heard the name of God, minds it, he becomes the support of his family; after him his whole family is saved.

98

पंच परवाण पंच परधान। पंचे पावहि दरगहि मानु। पंचे सोहहि दरि रनानु। पंचा का गृह एक धित्रानु॥ जे को कहै करै वीचार। करते के करण नाही सुमार ॥ धील धरम् दर्त्रा का पूत्। संतोख यापि रखिया जिनि सृति॥ जे को बुद्दी होवे सचित्रार। धवलै उपरि केता भार॥ धरती होत परै होत होत। तिस ते भारत तले कवण जोरा॥ जीय जाति रंगा के नाव। सभना लिखिया वृड्गे कलाम ॥ एड लेखा लिखि जाएँ कोइ। लेखा लिखिया नेता होइ॥ केता ताण सुत्रा लिङ रूपु। केती दाति जाएँ कडण कृत्॥ कीता प्रसाउ एकी कवाउ। तिस ते होइ लख दरी आउ॥

कुदरित कवण कहा वीचार। वारिश्रा न जावा एकु वारु॥ जो तुधु भाव साई भनी कार। तू सदा सलामित निरंकार॥

16.

Five are accepted, five are foremost: Five obtain honour at the threshold (of God): Five shine at the royal gate. The thought of the five is the One Guru. If one speaks, he reflects: There is no counting of the doings of the Creator. The white Bull is the son of religion and mercy, By whom contentment has been established as a rule. If one understands (this), he becomes a man of truth. How much burden is upon the white Bull? The earth is another, and at some distance, another, another. What load is upon that, and beneath what power? (There are) kinds of living beings, names of colours, The destiny of all, (in which) the pen (of God) has moved. If one know to write this account, How great an account will be written? How much is the power, the beauty created? How much the liberality? who knows the food? The show has been made by one word. From this have sprung a hundred thousand rivers. What is (his) power, what (his) thought? Not one time I can be sacrificed (to it). What pleases to thee, that is a good work. Thou, o Formless! art always in safety!

पंच पर्वाण, etc. The Sikh commentaries (and priests) cannot tell who or what these five are: they refer it even to the five elements, water, fire, etc.; but this is out of the question. Others explain पंच by righteous, etc., but this is a mere guess. In fact, the whole connexion of this Pauri is doubtful. धवन, the white Bull, is also taken here in an allegorical sense; he is called the son of religion and mercy. सभग जिल्ला the destiny of all; जिल्ला is here taken in the sense of a substantive. जाए की ए कुन who knows the food (i.e. which he is be-

stowing on the creatures)? कीता पसाउ एकी कवाउ is explained in various ways: पसाउ (from पसणा to see, caus.; पसाउणा to show), show, i.e. the visible word; similarly, कवाउ (from कवाउगा, instead of कहवाउणा to cause to say) word, saying. Neither word is now in use in any of the cognate idioms, and their signification can only be inferred. One Sikh commentary gives the following explanation: पसाउ is taken as identical with पसारा expansion (of creation), and कवाउ is thus described: एक मासा पडण, एक मासा पाणी, एक मासा अगन, एक मासा धरती ॥ एह चारे मासे कीए तिस एक टंक कवाउ होत्रा, i.e. one mâsâ (a small weight) of wind, one mâsâ of water, one mâsâ of fire, one mâsâ of earth; these four mâsâs have been made; one ṭank of this has been a kavâu; that is to say, a kavâu is a measure equal to a tank or four masas. This explanation would be in accordance with the paurânik traditions, but it is very doubtful, as Nânak, when speaking of the creation, never alludes to it in other places. বাহিসা ৰ জাবা एक বাছ not one time I can be sacrificed (to it), i.e. I cannot one time give myself entirely to it, can never come up to it, or understand it.

99

त्रसंख जप त्रसंख भाउ।
त्रसंख पूजा त्रसंख तप ताउ॥
त्रसंख गरंथ भुष्ठि वेद पाठ।
त्रसंख जोग मिन रहिह उदास॥
त्रसंख भगति गुण गित्रान वीचार।
त्रसंख मती त्रसंख दातार।
त्रसंख मूर मृह भखसार।
त्रसंख मोनि चिव चाद तार॥
वुद्रति कवण कहा वीचार।
वारित्रा न जावा एकु वार॥
जो तुधु भावै साई भनी कार।
तू सदा सनामित निरंकार॥

17.

(There are) innumerable repetitions (of the name of God), innumerable reverences.

Innumerable worships, innumerable heats of austerities. Innumerable oral readings of books and the Vêdas. Innumerable jögs, they remain secluded in the mind. Innumerable worshippers, pondering on the knowledge of (his) qualities.

Innumerable chaste, innumerable liberal ones.
Innumerable heroes, fighting face to face.
Innumerable silent devotees, who continually meditate.
What is (his) power, what (his) thought?
Not one time I can come up to it.
What pleases thee, that is a good work.
Thou, o Formless! art always in safety.

असंख जोग मिन रहिंह उदास innumerable jôgs (of such who) remain secluded in their heart or mind; the sentence is extremely brief. असंख सूर मृह भखसार innumerable heroes, fighting face to face. भखसार is very difficult to explain; the Sikh commentary explains it in the following way: कई सूरमे हैं मुख सार भखते हैं i.e. there are some heroes who eat iron in their face, an idiomatical expression for: who are beaten with iron (steel) in the face. According to this explanation भखसार would stand for सार भख, but such a transposition of nouns is extraordinary.

95

असंख मूरख श्रंध घोर।
असंख चोर हरामखोर।
असंख अमर करि जाहि जोर।
असंख गलवढ हिति आ कमाहि।
असंख गणवढ हिति आ कमाहि।
असंख पापी पापु करि जाहि।
असंख कूड़ि आर कूड़े फिराहि।
असंख मलेक मलु भाखि खाहि॥
असंख मलेक मलु भाखि खाहि॥
वास्त्रा न जावा एकु वार।
जो वुधु भावै साई भलो कार।
त सदा सलामति निरंकार॥

18.

Innumerable fools, stark blind.
Innumerable thieves, living on the wages of iniquity.
Innumerable rulers, who commit acts of violence.
Innumerable cut-throats, who commit murder.
Innumerable sinners, who commit sin.
Innumerable liars, who scatter falsehoods.
Innumerable barbarians, who devour dirt.
Innumerable slanderers, who lay a burden on the head.
Nânak speaks a low thought.
Not one time I can come up to it.
What pleases thee, that is a good work.
Thou, o Formless! art always in safety.

মাঘ ঘাং stark blind. স্থান is, according to the commentaries = স্থানি prince, ruler. কুই দিং নিই who scatter falsehoods; কুই = কুই the Formative plur. (without the postposition কন্ত kau). মিং কেই মাহ who lay a burden on the head, either on their own, or on that of another.

90

स्रसंख नाव स्रसंख याव।
स्रगंम स्रगंम स्रसंख लोस्र॥
स्रमंख कहिह सिरिभार होइ।
स्रखरी नामु स्रखरी मालाह।
स्रखरी गित्रानु गीत गुण गाह॥
स्रखरी लिखणु बोलणु बाणि।
स्रखरा सिरि संजोगु वखाणि॥
जिनि एहि लिखे तिसु सिरि नाहि।
जिन फुरमाए तिन तिन पाहि॥
जेता कीता तेता नाउ।
विणु नावै नाही को थाउ॥
कुदरति कवण कहा वीचार।
वारिस्रा न जाना एकु नार।

# जो तुधु भावै साई अली कार। तू सदा सलामित निरंकार॥

19.

(There are) innumerable names, innumerable places.
Unattainable, unattainable, innumerable worlds.
Innumerable, they say, are suspended with the head downwards.

In letters is the name, in letters the praise. In letters knowledge, songs, eulogies of virtues.

In letters writing, speaking, language.

In letters the description of events.

By whom these (letters) have been written, upon him it is not.

As he commands, thus, thus he obtains (it).

As much as (his) work is, so much is the name.

Without names there is no place.

What is (his) power, what (his) thought?

Not one time I come up to it.

What pleases thee, that is a good work.

Thou, o Formless! art always in safety.

The first three lines are quite irregular in their rhyme. HIGHTE is explained by the commentary in this way: सिर्तिल्वाए होइने जस करहे हैं being suspended with their head downwards they (i.e. the worlds) praise (him). अवरी = अवरीं, the Locative plural: In letters. The commentary gives the following explanation: परमेस्र जी के नाम की सालाह करदे हैनि मो अखरां विचि करदे हैनि अरु गित्रान गीत गण परमेसर जी के गावणहारे हरि कथा करणी वारता करणी सी भी अखरां विचि होइ॥ संजोग अह विजोग लिखिआ सो भी अखरां विचि लिखिया॥ जो कळ पैदा होया परमेसुर जी की रचना तिस सभस दे सिरि लेख पर्त्रा ऋर सभ लेखे विचि होए पर जिन एह रचना रची है स्रोस के सिरि लेख नाही स्रोह ऋलेख पुरख है। "They praise the name of God, and this they do in letters; and knowledge, songs, praising the Lord's qualities, the telling of the story of Hari, the telling of a tale, this also is done in letters. Union and separation (the fate) which is written, this also is written in letters. Whatever has been created, the creation of the Lord, upon all this

is fate fixed, and all are under (in) the fate, but upon him, by whom this creation has been made, there is no fate, he is the being not subject to fate." जैता कीता तेता नाउ as much as (his) work is, so much is the name, i.e. he has given a name to all of his works.

20

भरी श्रे हशु पैर तनु दहे।
पाणी धीतै उतरमु खेह॥
मूत पखीती कपड़ होइ।
दे सावूणु कई श्रे श्रोक्र घोहि॥
भरी श्रे मित पापा के संगि।
श्रोक्र धीप नावै के रंगि॥
पुनी पापी श्राखणु नाहि।
कारि करि करणा लिखि के जाङ॥
श्रापे वीजि श्रापेही खाङ।
नानक इकमी श्रावङ जाङ॥

20.

If the hand, foot, and body become dirty:
Being washed with water the dirt will go off.

If polluted by urine be the cloth:
Applying soap it may be washed.

If the heart is defiled with sins,
It is washed in the dye of the name (of God).

Meritorious or sinful is not merely a name:
Having done a deed they (themselves) set it down.

They sow themselves and reap themselves.

Nânak (says): By (his) commandments they come and go.

लर्द्रि बोड धोहि = ब्राइ धोहि लर्द्रि it is washed (धो लेगा to wash). पुंनी पापी आखणु नाहि meritorious (or) sinful is not a (mere) name or appellation, as some thought, but a reality.

ART. XII.—Notes on Dhammapada, with Special Reference to the Question of Nirvâṇa. By R. C. Childers, late of the Ceylon Civil Service.

I have given in the following pages some of the results of a careful study of the text of Dhammapada, rendered necessary by the preparation of a Páli Dictionary. In endeavouring to elucidate some of the obscure or difficult points of this important text, I have given prominence to a few passages enabling me to test the theory of Nirvâṇa which I propounded last year in the columns of a periodical. Verse 203. Jighaccháparamá rogá, sankhárá paramá dukhá,

Etam ñatvá yathábhútam nibbánam paramam sukham.

The sense of this verse is, "As hunger is worse than any disease, so existence is worse than any pain; to him who has realized this truth extinction is the greatest bliss." If any proof is wanted that the author of Dhammapada believed Nirvâna to be the annihilation of being, it is surely here. When he says in the same breath that existence is the acme of suffering, and that Nirvana is consequently the highest bliss, it follows logically and inevitably that Nirvana must be the cessation of existence. Nirvâna must here be taken as Anupadhiçeshanirvâna. Sankhárá (in the plural) is used almost in the sense of "organic life." The comment says, "the five Skandhas," which amounts very much to the same thing; for the Skandhas are the attribute of every organized being, however low in the scale of animal life. Compare the expression sabbe sankhatásankhatadhammá, "all things organized and unorganized," or "all things animate and inanimate," which includes, of course, the whole realm of creation. I take this opportunity of re-stating the theory of Nirvana which I published in the July and October numbers of Trübner's Record for 1870; and I may observe that my

theory meets, as far as I know, all the difficulties of the question, and holds good in every instance in which I have tested it.

Nirvâna means extinction or annihilation. It is the ultimate goal of Buddhism, the supreme reward of the highest spiritual development, the summum bonum to which the follower of Çâkyamuni is taught to look. What, then, is this Nirvâna or extinction which is the reward of virtuous action? It is twofold—Upadhiçeshanirvâṇa, or the extinction of human passion; and Anupadhiceshanirvâna, or the annihilation of being. There are eight progressive stages of sanctification, called the Four Paths and the Four Fruitions: 1 the last and highest of these stages is called Arhattvaphala, or "full fruition of final sanctification," and this is Upadhiçeshanirvâṇa, or, as it is also called, Kleçapariṇirvâṇa. Arhatship or Arhattvaphala is admittedly a state of the highest happiness and perfection, and its identity with Upadhiçeshanirvâṇa, or, as it is more generally called, simply Nirvâna, cannot be too strongly insisted upon, since it accounts for the frequency with which Nirvana is spoken of as a state of bliss. This, then, is one of the Nirvâṇas, the other is Anupadhiceshanirvâṇa or Skandhapariṇirvâṇa,² which it is impossible to explain as anything but absolute annihilation. The Arhat, or being who has attained final sanctification,3 though wholly free from human passion, and possessed of superhuman faculties, is still a man, and liable, like all other men, to death. Nor is his life necessarily prolonged beyond that of his fellows; Çâkyamuni himself, the Great Arhat, died at an age not exceeding the common lot of humanity. But the Arhat, alone of men, when The oil in the lamp of life is burnt he dies ceases to exist. out, the seed of existence is withered, he enters the vast portals of Nothingness and Void, and entering vanishes from creation,-he has attained to Skandhaparinirvâna, the annihilation of the elements of being. I have said that Nirvana is twofold; but is it not also one? for Skandhaparinirvana is

In Páli Cattdro Maggd and Cattdri phaldni.
 Generally called simply Nirvâna.
 Arhattvaphala or Kleçaparinirvâna.

the necessary complement of Kleçaparinirvâna, as the latter is of the former. Without Arhatship there can be no cessation of existence, 1 just as there can be no Arhatship that does not terminate in extinction. Viewed, therefore, from a distance as it were, as the goal of the pious Buddhist, Nirvana is one; it is a brief period of the highest bliss on earth, ending in eternal death. It may here be objected-Must not great confusion be created by using one and the same term for two things so different as "bliss" and "annihilation"? I reply that in reality there is no such confusion, since the context will readily determine whether, by the word Nirvâna, Upadhiçesha or Anupadhiçesha Nirvâna is intended. And in a vast proportion of instances the term embraces both Nirvanas. Thus in such a sentence as "Nirvâna is the reward of a virtuous life," it is clear that both Nirvânas are meant, since they are inseparably connected, and the one involves the other as a necessary consequence. There are, however, occasions when one of the Nirvânas is distinctly alluded to, and then the context determines which of them is meant. Thus in verse 89 the word loke specifies Upadhiçeshanirvâna, while in the verse we have been considering Anupadhiçeshaniryâna is clearly indicated by the use of the word sankhárá.

In conclusion I wish to add that the much contested word Parinirvâṇa means "the attainment of Nirvâṇa," or simply Nirvâṇa. Like Nirvâṇa it is twofold, Kleçapariṇirvâṇa, "attainment of the extinction of human passion," and Skandhapariṇirvâṇa, "attainment of the annihilation of the elements of being." When the Pariṇirvâṇa of an Arhat is spoken of, it may be translated "death"; for in the case of an Arhat, death and the attainment of Nirvâṇa are simultaneous. The word Mahâpariṇirvâṇa merely means the death of Buddha.

Verse 89. Te loke parinibbutá, "they attain Nirvâṇa in this world"; that is they attain Upadhiçeshanirvâṇa or Arhatship, which is compatible with existence. Parinibbuta (pari+nis+vrita) is always used for the part. perf. pass. of parinibbáti, "to attain Nirvâṇa." The regular p.p.p. would be parinibbána,

 $<sup>^1</sup>$  I mean, of course, on this earth, since, for instance, an Anâgâmin attains Skandhapariṇirvâṇa from one of the Brahma heavens.

but there is a confusion in Páli between the compounds nirvá and nirvri, so much so that nibbuti (nirvriti) means both happiness (or tranquillity) and annihilation. It is well known that this sort of confusion is frequent in Páli. An important reason against the use of parinibbána as the p.p.p. of parinibbáti is that it would be readily mistaken for the noun parinibbána. When used of an Arhat parinibbuta may be translated "having died," e.g. Lokanáthe dasabale sattáhaparinibbute, "when the world's protector endowed with the ten forces had been dead seven days." 2

Verse 153. Anekajátisamsáram sandhávissam anibbisam

Gahakárakam garesanto dukkhá játi punappunam. "I have run through the revolution of countless births, seeking the Architect of this dwelling and finding him not, grievous is repeated birth." Fausböll takes sandhávissam as a conditional, but the sense imperatively requires an aorist, and Mr. Trenckner pointed out to me some time ago that sandhávissam in this place is a true aorist, the Sanskrit aorist The third persons sing. and plur. of this aorist occur pretty frequently in Páli, and end in -isi and -isum 4 respectively. The doubled s has many analogies in Páli. The learned Sthavira Dhammarama of Yatramulle has favoured me with a long extract from Culla Saddaníti, in which the author, misled by the doubled s, calls sandhavissan "a future in a past sense" (atttatthe bhavissanti hoti), and cites a passage from the Tripitaka book Vimánavatthu containing an analogous example. The passage is as follows:-

Cátuddasim pañcadasim yáva pakkhassa atthamí Pátiháriyapakkhañ ca atthangasusamáhitam Uposatham upavasissam sadá sílesu samvutá.5

Here Culla Saddaníti remarks, Imissá Vimánavatthupáliyá attham samvannentehi "upavasissan ti upavasim atitatthe hi idam anagatavacanan ti vuttan" ti saccam vuttam, "the com-

5 Compare Dh. p. 404.

Mahavamsa, p. 11.

Mahavamsa, p. 11.

In Pali the 1st pers. fut. atmane, and the 1st pers. cond. (parassa and atmane) both end in -issam. In the cond. the augment may be dropped, so that sandhavissam might be a future or a conditional.

Sanskrit ft (for ishft), and ishuh.

mentators upon this passage of Vimánavatthu observe with truth that *upavasissam* is for *upavasim*, for here the future is used in a past sense."

Verse 166. Attadattham paratthena bahuná pi na hápaye Attadattham abhinnáya sadatthanasuto siyá.

I think the meaning of this verse is, "Let him not forego his own spiritual good for the sake of another man's, however great; when he has discerned his own spiritual good, let him devote himself thereto." This is, I think, in accordance with the comment, and makes the sentiment one to which no exception can be taken, even from a Christian point of view. Attha is constantly used in Páli in the sense of spiritual good, and this very word sadattha (sva-artha) is used at page 12 of Turnour's Mahávaṃsa, where Arhatship or spiritual perfection is intended. The words are:—

Sve sannipáto,  $\bar{A}$ nanda ; sekhena gamana $\bar{m}$  tahi $\bar{m}$ 

Na yuttan te; sadatthe tvam appamatto tato bhava. "To-morrow, Knanda, is the convocation, it is not right that thou shouldst attend it while yet imperfect, strive earnestly therefore for thy spiritual good."

Verse 32. Appamádarato bhikkhu pamáde bhayadassivá Abhabbo parihánaya nibbánass' eva santike.

The meaning of parihána here is "falling away," "falling off," "retrogression." The comment says, "A priest who is in this state is not liable to fall away either from the state of tranquillity and contemplation, or from the Four Paths and their fruition: if he has attained them, he cannot lose them; if he has not yet attained them, he cannot fail to do so." Compare the passage at Dham. p. 254, where Godhika Thera is said to have attained the first Jhána and then fallen away from it: the expressions used are, "samádhikam cetovimuttim phusitrá tato pariháni," "chakkhattum jhánam nibbattetrá parihíno," "jháná parihíno." I would render the whole verse "The recluse who delights in diligence, who sees danger in sloth, is not liable to fall away from holiness, but is close upon

<sup>&</sup>lt;sup>1</sup> Compare also Dham. verse 364, *Dhammam anussaram bhikkhu sadshamma na parihayati*, the recluse who remembers the Law will never fall away from true religion.

the attainment of Nirvâṇa." That is to say, his salvation is assured, nothing can prevent its accomplishment. Nibbána here means kleçaparinirvâṇa or Arhatship (see the comment).

Verse 55. Candanam tagaram vá pi uppalam atha vassiki Etesam gandhajátánam silagandho anuttaro.

The meaning of the second hemistych is, "The perfume of virtue (síla) far surpasses the perfume of these spices." There is a confusion in the construction, as the literal rendering would be, "Of these sorts of perfumes (gandhajátáni), the perfume of virtue is the best." I do not see how síla can be taken as anything but the Sanskrit çíla; the commentator takes it so, and the analogy of the preceding and following verses requires it.

Verse 71. Na hi pápam katam kammam sajjukhíram va muccati Daham tam bálam anveti bhasmácchanno va pávako.

The word muccati, in Páli, when applied to milk, means "to curdle," literally, "to be got rid of," I suppose because, in the process of curdling, the milk in great measure disappears and is replaced by curds. The Sthavira Subhúti informs me that the true version of the comment is, Sajjukhiran ti tankhanam yeva dhenuyá thanchi dhovitvá gahitakhíram, na muccatíti na parinamati na pakatibhávam jahati na dadhibhavam ápajjati, "Sajjukhíra means milk just drawn from the previously washed udder of the cow; na muccati means that it does not change, does not leave its original state, does not turn into curds." This explanation makes sajju not an independent word qualifying the sentence na hi pápam katam kammam muccati, but the first part of a compound word sajjukhira, meaning "new milk." It is a satisfactory solution of the difficulty, and the sense of the whole verse would be, "As newly drawn milk will not curdle for a long while, as fire covered by ashes goes on smouldering for a long while, so it takes a long while to get rid of the consequences of an evil action." Of course in a translation the play upon the two meanings of muccati is lost, and the simile is deprived of most of its force. It is worthy of notice than in the Simhalese Prakrit mid, the equivalent of muc, means, according to Clough, "to loosen, to release," and also "to congeal, to coagulate."

Verse 252. Sudassam vajjam aññesam attano pana duddasam Paresam hi so vajjáni opunáti yathá bhusam Attano nana chádeti kalim va kitavá satho.

"The faults of others are easily seen, our own are difficult to see; a man winnows his neighbour's faults like chaff, his own he keeps out of sight as the fradulent gambler hides his loaded dice." Fausböll translates yathá bhusam, "as much as possible," taking it as a compound word, the equivalent of which would be yathábhriçam in Sanskrit. But bhusa in Páli means also "chaff," and the use of opunáti almost positively demands that yathá bhusam should be translated "like chaff." The commentator takes this view in the most decided and unmistakable manner, for he says bhusam opunanto viya opunáti, "winnows them like one winnowing chaff." The force and beauty of the metaphor is obvious enough.

Verse 257. I do not see how dhammassa gutto can be rendered "custos legis," since gutta (gupta) is used only in a passive sense. I would translate the passage, "The wise man who is guarded by justice (or by the Law) is called just." A man guarded by justice would of course mean a man whose actions or words are directed by a sense of justice. The comment says dhammagutto dhammarakkhito, which can only mean "guarded by dhamma, kept by dhamma."

Verse 272. Dhammáráma informs me that the true reading of the last line is bhikkhu vissása' m'ápádi appatto ásavakkhayam, or rejecting sandhi bhikkhu vissásam má ápádi appatto ásavakkhayam, "priest, be not confident as long as thou hast not attained the extinction of desire."

Verse 283. Vanam chindatha má rukkham vanato jáyati bhayam

Chetrá vanañ ca vanathañ ca nibbáná hotha bhikkhave. "Cut down the whole forest, not the tree, danger comes out of the forest; when ye have cut down both the forest and its undergrowth, then shall ye be free from passion." Half the force of this passage is lost in a translation, from the impossibility of rendering the play on the two meanings of vana. It is doubtful whether nibbáná or nibbaná (nis+vana) be the right reading. Vána² means "desire" in Páli as well as

<sup>&</sup>lt;sup>1</sup> See Abhidhánappadípiká, 453: it is the Sanskrit busa. <sup>2</sup> Abhidhán. 163.

vana, and nibbána would not be a participle, but an adjective

meaning "free from vána or lust."

Verse 344. Subhúti informs me that the true reading is nibbanatho, and the first line means, "he who having got rid of desire hankers again for desire." The readings of Fausböll's three manuscripts are nibbanatho, nibbanato, and nibbánato.¹ Mr. Fausböll now agrees with me in thinking that the two last are obvious copyists' errors.

Verse 289. Nibbánagamanam maggam khippam eva visodhaye. This is an instance of Nibbána, meaning both Nirvânas.

(See my remarks at p. 221).

Verse 331. Tutthi sukhá yá itaritarena, "A blessed thing is joy, whatever be the cause." Itaritura in Páli does not mean "mutual," but "any whatever." Thus in the text of one of the Buddhist classifications we have Idh' ávuso bhikhhu santuttho hoti itaritarena civarena, "contented with whatever robes he is presented with," that is, whether they be of fine or of coarse material. In this verse káranena might be supplied after yá itaritarena. The comment says parittena vá vipulena vá, "caused by a small or a great matter." Any one who has seen a child in ecstasies of delight over the veriest trifle will agree that "a blessed thing is joy, whatever be the cause."

Verse 369. Chetvá rágañ ca dosañ ca tato nibbánam ehisi. "When thou hast rooted out lust and hate then shalt thou go to Nirvâṇa." Here Skandhapariṇirvâṇa or Anupadhiçeshaṇirvâṇa is intended, for he who has rooted out râga and dvesha is the Arhat (vitarága), who "afterwards" (tato, or, as the comment says, aparabháge, viz., at the end of the few years he has to live), attains the annihilation of being. The comment distinctly specifies this Nirvâṇa to be Anupadhiçeshanirvâṇa: the words are rágadosabandhanáni chinditvá arahattaṃ patto tato aparabháge anupadhisesanibbánaṃ ehisîti attho, "having severed the bonds of lust and hate and attained Arhatship, thereafter thou shalt go to Nirvâṇa." It will be observed that the Páli equivalent of upadhiçesha is upádisesa. This is a compound of sesa (çesha) with upádi, a masculine noun formed from the root på "to take" with â and upa. Upádi

<sup>&</sup>lt;sup>1</sup> See Dham. p. 466.

is closely allied with upádána, the more regularly formed derivative of upa-â-pâ, and is used to designate the Five Skandhas. This word is interesting because it is one of the forms which give evidence that the Páli or southern recension of the Buddhist scriptures is the original one, and that the oldest Sanskrit texts of Northern Buddhism are translations from it, possibly made some time after the Páli text of the Tripitaka had been settled. Upádi is one of the unclassical forms which abound in Páli, and restore to it so much of the wealth it loses from assimilation and other causes. The final syllable di must be formed from DA, on the analogy of dhi from DHA. I imagine, then, that the translators of the Páli religious texts into Sanskrit, meeting with this word, and unable to make anything of it, replaced it by the nearest approach they could find to it in classical Sanskrit, viz., Upadhi.1 Other instances might be adduced; thus the word phásuvihára occurs frequently in the Páli Tripitaka with the meaning of "life of ease or happiness." Phásu is a Páli neuter noun, meaning "comfort, ease, happiness," the etymology of which I have failed to discover. The author of Saddharmapundarîka,2 meeting with the word phásu, took it for the equivalent of sparca, and rendered the compound phásuvihára by sukhasparçavihâratâ, "life of agreeable contacts." But phásu can really have nothing to do with sparça, first because its meaning and use are totally distinct from those of sparça,3 and secondly because the regularly formed equivalent of sparca, namely phassa, is in constant use in Páli in the sense of "touch" or "contact." Again, the Páli word páramitá, "perfection," is formed by adding the suffix tá to páramí, an anomalously formed derivative of parama.4 The author of Saddharmapundarîka probably found the form páramí very puzzling, for he almost entirely ignores it, and employs the longer form paramita, which he takes to be a

¹ Upadhi is used also in Páli in a metaphysical sense, the four Upadhis being the Skandhas, the Kamagunas, Kleça, and Abhisamskara.

Lotus, p. 425-7.
 For instance, phásugamanam, "pleasant journey," phásukam thánam, "comfortable quarters." Besides phásu is properly an adjective, see Abhidhán. p. 15,

<sup>4</sup> Intr. p. 464. Páramí is a feminine noun, the plur. is páramiyo.

compound of pâra and ita, like pâragata. The circumstance that párami is much more frequently used in Páli than páramitá, is almost conclusive against this derivation. Again, the well-known Páli word uposatha is simply a contracted form of upavasatha, but the o in the second syllable evidently misled the Sanskrit translators, for the North Buddhist equivalent is uposhadha, which seems to be a sort of compromise between the Páli form uposatha and the Sanskrit part. perf. pass. uposhita.<sup>2</sup>

Verse 295. Mátaram pitaram hantvá rájáno dve ca sotthiye Veyyagghapancamam hantvá anigho yáti bráhmano.

"The true brahmin goes scatheless though he have killed father and mother, and two holy kings, and an eminent man besides."

It is a remarkable fact that Çâkyamuni, though never remiss in declaiming against the errors of the Brahmins, adopted the word bráhmaṇa, with all its sanctity and prestige, into his own system, but made it a denomination of the Arhat, or devout Buddhist who has attained to final sanctification. Buddha even applied the epithet to himself in a *Udánagáthá*, "hymn of joy," he uttered after his attainment of omniscence.

Yadá have pátubhavanti dhammá Ātápino jháyino bráhmanassa Ath' assa kankhá 'v' apayanti sabbá Yato pajánáti sahetudhammam.

"When the Truth is made manifest to the striving, the meditating brahmin, then his doubts all flee away when he knows existing things and their causes." The Brahmanavagga of Dhammapada tells us that the true Brahmin is not he who is born of Brahmin parents, but the man in whom passion is destroyed—khinasavam arahantam tam aham brumibrahmanam. But to return to our verse: Fausböll thinks the sentiment it conveys inconsistent with Buddhist doctrine, though quite in accordance with the Brahminical system. This, however, is on the assumption that the word brahmana is taken in its natural sense, whereas we have seen that it may perfectly mean an Arhat, and the comment says nikkilesa, which is the 1 See Burn. Intr. p. 464; Lotus, p. 544.

same thing. In my judgment this verse is intended to express in a forcible manner the Buddhist doctrine that the Arhat cannot commit a serious sin. It is as much as saying, "An Arhat cannot commit sin, but were he to commit even sins so dreadful as parricide and murder he would be scatheless," that is, as Dr. Max Müller has observed, if he does commit these crimes, it must be by accident, so that no guilt would rest upon him. Veyyaggha is a derivative of vyaggha, and means, I think, "an eminent man," literally, "a tigerish man."

Verse 302. I think the comment affords a satisfactory explanation of this difficult verse, "The traveller on the long road of Saṃsára meets with nothing but pain; painful is the life of the recluse, painful is the life of the householder, painful is association with those who are not our equals: therefore let him travel no more, and so he will not be exposed to suffering." That is, let him obtain Nirvâṇa, and bring to an end his journey through Saṃsára. Compare p. 280 of Dhammapada, where it is said that there are two sorts of roads on which a man may be a traveller, kantáraddhá, a road though a difficult country, and vaṭṭaddhá, the road through Saṃsara.

Verse 368. Adhigacche padam santam sankharupasamam sukham.

"He will attain the tranquil, blessed lot, where existence is no more." Here I believe Skandhaparinirvâna to be intended, as in the verse which immediately follows, and which we have already considered. From a Buddhist point of view there is really no reason why annihilation should not be spoken of as "blessed," or even as "bliss"; it is a "happy release" from suffering which without it would be endless.

Verse 394. Kin te jatáhi dummedha kin te ajinasátiyá Abbhantaram te gahanam báhiram parimajjasi.

"Thou fool, what dost thou with the matted hair, what dost thou with the raiment of skin? thine inward parts are full of wickedness, the outside thou makest clean." Abbhantaram is a noun, and means "inner man," "heart." It is, I think, best to take gahanam as an adjective in agreement with

<sup>&</sup>lt;sup>1</sup> Abhabbo khinasavo bhikkhu sancicca panam jivita voropetum, etc.
<sup>2</sup> Vritta, "the circle of Samsara"+adhvan.

abbhantaram, and meaning, choked, filled up, impenetrable from the forest growth of sin; or it might be taken as the noun gahanam,1 "a forest or jungle," "a thicket." The metaphor is the same as at verse 283, where vana means desire or lust.

Verse 396. Bhovádi náma so hoti, "he is called Arrogant." In the Páli texts bho is a familiar term of address used to inferiors or equals. The compound bhovádin would mean "one who says bho," and the comment on this verse says, Bhorádíti yo pana ámantanádisu bho ti vatvá vicarati, "a man is called Bhovâdin who goes about saying Bho when he accosts people or otherwise addresses them."2 Brahmins not converted to Buddhism are always represented as saying bho Gotama to Buddha,3 and this address must have greatly jarred upon pious Buddhists, who never spoke to their master but with the highly reverential epithet of Bhante, "Lord." Buddhists therefore in calling Brahmins Bhovadin meant, I suppose, to imply that they were a proud and haughty class, so proud as to address even the Buddha with familiarity if not disrespect.

Verse 339. Subhúti informs me that the right reading is not manápassa vaná, but manápassavaná, "flowing in the channels of pleasure." Manápassavaná is a compound of manapa and savana,4 and is an adjective in the nom. fem., agreeing with tanhá, understood. The comment is manápesu rúpádisu savati pavattatíti manápassavaná tanhá bhusá balavatí hoti.

Verse 341. Subhúti informs me that sarita is, as conjectured by Fausböll, the part. perf. pass. from "sara-gatimhi," viz., sri. The comment should be saritániti anusaritáni payátáni. At verse 345 the comment should be sárattarattá ti sárattá hutva rattá balavarágarattá ti attho.

Verse 129. Upamam is the accusative of the fem. noun upamâ. Attánam upamam katvá exactly conveys the idea, "do as you would be done by." The comment says yathá aham evam aññe pi sattá.

3 See, for instance, Dham. p. 98.

<sup>&</sup>lt;sup>2</sup> A Tíká on Kaccáyana, in the India Office, explains bhovádí thus: Bho bho vaditum silam assati bhovddi, "one whose custom it is to say bho to people is a bhovádí. 4 From sru, "to flow."

Art. XIII.—The Brhat-Sanhitâ; or, Complete System of Natural Astrology of Varâha-mihira. Translated from Sanskrit into English by Dr. H. Kern.

(Continued from p. 90.)

#### CHAPTER XVI.

Countries, People, and Things belonging to the Domain of each Planet.

1-5. The eastern half of the Narbadda district, the Çoṇa, Orissa, Vanga, Suhma, Kalinga, Balkh, the Scythians, Greeks, Magadhas, Çabaras, Prâgjyotisha, the Chinese, Kâmbojas, Mekalas, Kirâtas, Viṭakas,¹ the people beyond and within the Mountains,² the Pulindas, the eastern half of the Dravidas, the south bank of the Jamnâ, Campâ, Udumbara, Kauçâmbi, Cedi, Vindhya forest, Kalinga,³ Puṇḍra, Mounts Golângûla, Çrîparvata, Bardwân, the river Ikshumatî; moreover, robbers, Pârata, wildernesses, herdsmen, seeds, grains in husks, pungent substances (pepper, etc.), trees, gold, fire, poison, heroes, medicines, physicians, quadrupeds, ploughmen, princes, evil-doers, chiefs on march, thieves, beasts of prey, woods, renowned men and bravoes; of all these the Sun is the lord.⁴

- <sup>1</sup> These are the same tribes who by a synonymous term are called Lampâkas and Utsavasanketas; they are said to scorn the institution of matrimony, and to form only temporal engagements, Iasting for the time of a festival.
  - <sup>2</sup> i.e. a part of the Himâlaya; cf. Mahâbh. ii. 27, 3 (Bombay ed.).
  - 3 The author forgets that he has mentioned Kalinga just before.
- <sup>4</sup> Throughout this chapter Varâha-mihira appears to have chiefly followed Kâçyapa; for comparison the corresponding passage in Kâcçyapa here follows:

तथाच काश्यपः

प्रागर्धं नर्भदायाञ्च शोणं श्रवरमागधान् । स्रोजान्वज्ञान् कलिङ्गां वास्त्रीकात्यवनाञ्ककान्॥

6-8. The Moon presides over: mountain strongholds, forts defended by water, Kosala, Bharoach, the Ocean, the Romans, Tocharians, Vanavâsi-district, Tangana, Hala, the kingdom of the Amazons, the islands of the great Ocean, things of sweet taste, flowers, fruits, water, salt, gems, conch-shells, pearls, aquatic products, rice, barley, weeds, wheat, the Soma-drinkers, princes coming to the rescue of their allies, priests, white objects, beloved persons, horses, paramours, damsels, generals, food, clothes, horned animals, night-walking beings, agriculturists and persons acquainted with sacrificial rules.

9-15. The inhabitants of the western half of the districts of the Çoṇa, Narbaddâ and Bhîmarathâ, the Nirvindhyâ, Vetravatî, Siprâ, Godâvarî, Venâ, Mandâkinî, Payoshņi,1 Mahânadî, Sindhu, Mâlatî, Pârâ, North Pâṇḍya, Mount Mahendra, those who live near the Vindhya and Malaya hills, the Colas, Dravidas (or Dramidas), Videhas, Andhras, Açmakas, Bhâsâparas, Konkan, Matrishika, Kuntala, Kerala,

काम्बोजान्मकान्सुह्यान्प्राग्चोतिषकिरातकान्। चीनान्सर्वासु (?) ग्रैलेयान्यार्वतान्वहिरन्तजान्॥ यमुनाया याग्यं कूलं कीशाम्ब्योदुखराणि च। विन्थाटवीञ्च पुण्ड्रांस वर्धमानञ्च पर्वतम् ॥ श्रीपर्वतं चेदिपुरं गोलाङ्गलं तथैव च। इ जुमत्यात्रिता ये च जनाः सूरा मदोत्लटाः॥ कानारमथ गोपां वन्दरां सक्तरां सथा। समरे विषमाञ्कूरांस सरान् कटुकानपि॥ चतुष्पादान्भेषजां यधान्यञ्च भिषजस्या। ग्रर्णयायियाडांच वार्षकान्यालकांखया॥ गीरं यत् पद्मिक्कलां पुंसंचा ये च जन्तवः। सर्वेषां भाखारः खामी तेजखेजखिनामपि॥

<sup>&</sup>lt;sup>1</sup> Another reading, also in Kâçyapa, is Paroshnî.

 $<sup>^2</sup>$  Or Bhdsåpura or Bhdsåvaras. May be, Bhdsåparas ( =Bhåsåvaras), means "those who live on this side of Mount Bhasa." Utpala gives no explanation.

<sup>&</sup>lt;sup>3</sup> Perhaps an error of the copyists or of the copies of some works

Dandaka, Kântipura, the Barbarians, half-castes, townspeople, agriculturists, Pâratas (or quicksilver), people using fire in their trade, professional soldiers, foresters, fortresses, boroughs (or the Karvatas), slayers, cruel men, arrogant fellows, kings, princes, elephants, hypocrites, riots, blows, herdsmen, red fruits and flowers, coral, generals, sugar, spirits, anything sharp, treasuries, keepers of holy fires, mines, Buddhist monks, thieves, false, vindicative, and gluttonous persons; all these have Mars for their lord.

16-20. To Mercury's domain belong: the Lauhitya, Indus, Sarayû, Gambhîrikâ, Rathasyâ,² Ganges, Kauçikî, and other rivers, Videha, Kâmboja, the eastern half of Mathurâ, the Himalaya-, Gomanta-, and Citrakûṭa- mountaineers, Surashtrians, dikes (and bridges), water-roads, merchandize, inhabitants of caverns, hill-people, water-reservoirs, mechanicians, singers, caligraphists, connoisseurs of precious stones, dyers, perfumers, painters, grammarians, arithmeticians, outfitters,³ preparers of potions securing longevity,⁴ artisans, spies, jugglers,⁵ infants, poets, false-hearted men, denunciators, exorcisers, envoys, eunuchs, buffoons, ghost banners, magicians, policemen, stage performers, dancers, ghee, oil,

consulted by the author, for सहाज्जुधिका: "with Atri's hermitage and the Rshikas." ch. xix. 14 and 15.

1 The r. Town of the printed text would denote "ignorants."

<sup>2</sup> It is difficult to decide upon the true form; my MSS. of C. have राज्या, राज्या, राज्या, or राज्या. Cf. B. and R. Sans. Dict. i. v.

The construction in the text is ungrammatical, jna being connected not only with dyushya and cilpa, but also with ganita, cabda, and dlekhya. The irregularity would disappear if we read prasûdhana.

<sup>4</sup> Comm. आयुष्यं रसायनं वाजीकरणादि।

<sup>5</sup> Utpala: कुहलेनाझुतेन प्रसेनाद्दिश्नेन ये जीवन्ति. The word प्रसेन, or, as a MS. has in the passage cited in the footnote on ch. ii. 16, प्रसन, is evidently synonymous with प्रपञ्च. Since the verbal base प्रस् is stated to mean "to extend," like प्रपञ्च, प्रसन् or प्रसन्। must be a regular derivative of it, or the base may have been made in order to explain the existing noun. Neither प्रसन् nor प्रसन् is found in the dictionaries.

seeds, anything bitter, votaries, preparers of philters, and

21–25. The eastern part of the Indus, the western half of Mathurâ, the Bharatas, Sauvîras, Srughnas, Northerners, the rivers Vipâçâ and Çatadru, the Ramathas, Sâlvas, Trigartians, Pauravas, Ambashthas, Pâratas, Vâṭadhânas, Yaudheyas, Sârasvatas, Ârjunâyanas, half the rural provinces of Matsya, elephants, horses, royal chaplains, kings, ministers, persons engaged in festivals and actions for promoting wellbeing, compassionate, truthful, honest, pious, learned, charitable, and righteous men, citizens, rich men, grammarians, philologers, knowers of the Veda,¹ exorcisers, politicians, royal equipments, umbrellas, banners, chowries, etc., benzoin, spikenard, borax, costus, myrrh, salt, pepper (or beans), sweet juices, honey, wax and Coraka-perfume: all these are Jupiter's.

26–30. To Venus belong: the Takshaçilas, Mârttikâvatas, Hill districts, Gandharians, Pushkalâvatas, Prasthalas, Mâ-lavas, Kaikayas, Daçârnas, Uçînaras, Çibis, those who drink the waters of the Vitastâ, Irâvatî, and Candrabhâgâ, chariots, silver-mines, elephants, horses, elephant-drivers, wealthy men, fragrant things, flowers, unguents, gems, diamonds, ornaments, lotuses, couches, bridegrooms, young fellows, damsels, necessaries for love-making, invigorating remedies, those that take sweets, parks, water, lovers, renowned, happy, liberal-minded and handsome men, scholars, ministers, merchants, potters, speckled birds, cardamoms, cloves, bdellium, silk, wool, bleached silk, Lodh-bark, malobathrum (?), cassiabark, mace, agallochum, orrisroot, pepper and sandal.

31-34. Saturn's are: Ânartta, Arbuda, Pushkara, the Surashtrians, Âbhîras, Çûdras, Raivatakas, the country where the Sarasvatî disappears, the western country, the inhabitants of Kuru-fields, Prabhâsa, Vidiçâ, Veda-Smṛtî, those who dwell

<sup>&</sup>lt;sup>1</sup> The ungrammatical nomin. pl. vidushah is by no means rare in the Mahabh. and kindred works.

² Comm. पुष्पमालानुनेपनादिः

<sup>&</sup>lt;sup>3</sup> For मृष्ट r. वृष्य.

<sup>4</sup> i.e. the country about Thanesar (Skr. Sthanviçvara).

along the banks of the Mahî, rogues, dirty fellows, low people, oil-millers, cowards, eunuchs, fetters, fowlers, dishonest men, fishers, deformed persons, presbyters, swineherds, foremen of companies, those that have broken their vows, the Çabaras, Pulindas, poor men, anything pungent and bitter, potions, widows, snakes, thieves, queens, donkeys, camels, lentils, and such grains in pods as cause flatulency.

35-37. To Râhu belong: the inhabitants of mountain peaks, of dens and chasms, the tribes of Barbarians, Çûdras, Jackaleaters, Sûlikas, Vokkâṇas, the people with horse faces, crippled persons, those who dishonour their lineage, evil-doers, ungrateful men, thieves, faithless, dishonest and stingy persons, donkeys, spies, boxers, wrathful men, un-born children, low people, reprobates, hypocrites, giants, all sleepy beings, lawless men, peas and sesamum.

38-39. The following are enumerated as pertaining to the domain of Ketu:<sup>4</sup> mountain strongholds, the Pahlavas, Çvetas, Huns, Colas, Afghans, the Desert, Chinese, the Marches, rich men, those that wish to achieve great things, resolute and energetic men, adulterers, disputants, those that take joy at another man's misfortune, persons elated with pride, blockheads, unjust and ambitious men.

40. A planet is auspicious to those whose lord he is mentioned to be, if, at rising, he be large, bright and in his natural state, if no typhoon, meteor, dust or planetary conflict annoy him, and when he stands in his own mansion, has reached his height, and is looked at by benign planets.

41. If a planet shows signs contrary to the aforesaid, his dependency is ruined; people and kings feel sad, suffering from affrays, unsafety and disease.

¹ This is an elliptical way of intimating "jailers and captives," बन्धनपाना बन्धनस्थासु, as Utpala understands it.

<sup>&</sup>lt;sup>2</sup> Comm. खविरा:.

<sup>3</sup> Comm. वातला राजमाषप्रभृतयः, but निष्पावाः शालयः।

<sup>&</sup>lt;sup>4</sup> The singular Ketu is here perfectly meaningless, because in the system of Varâha-mihira Râhu is both the ascending and the descending node; just before (v. 37) Râhu is called Arkaçaçiçatru. The plural Ketavaḥ would denote "the comets."

42. If no danger awaits the kings from the foe, then, to be sure, it threatens them from their own sons or ministers. In consequence of the drought, the country-people will frequent towns, mountains and rivers which they never visited before.<sup>1</sup>

<sup>1</sup> The whole of this chapter has been condensed in the author's Samasa-Sanhita into the following:

## तथाच समाससंहितायाम्

#### CHAPTER XVII.

## Planetary Conflict.

1. How and when a conflict (of the planets) will take place, according to the teaching of the sages who know past, present, and future, has been explained by me in the Astronomical Treatise, after the Sûrya-siddhânta.

2. The planets move in the firmament in severally higher and higher orbits, but owing to the great distance they seem,

to our sight, to move in the same plain.

3. According to the degree of their (seeming) approachment, there are four kinds of conflicts, as stated by Parâçara and other sages, to wit, cleaving (i.e., occultation), grazing, clashing of the rays, and passing southward.<sup>1</sup>

4. At the occurrence of an occultation the rains will fail and discord prevail among friends and powerful families. When planets graze one another, there is danger from the sword, dissension amongst royal councillors, and dearth.

5. At a clashing of the rays there will be war between kings, and desolation by sword, disease, and famine. Likewise there will be hostile encounters between monarchs at the planetary conflict termed passing southward.<sup>2</sup>

¹ Utpala: यन इयमधित इक जखते स भेदः। यधः खिनी र्घ्वस्थान द्वत दित यानत्॥ यन यहख यहेण विम्वपरिधिसंस्थाः क्रियते स तूझेखः॥ अंभवो रममयखेषामंगुना परस्यरं मर्दनं। भेदोन्जिख्यतिरेन्तिणासन्नयोर्ग्रह्योः परस्यरं रमयः संयुक्ता व्याहन्यमाना इन जच्यने तदंगुमर्दनम्॥ Cf. comment. on Sûrya-siddhânta, vii. 18, seq. The apasavyam or asavyam yuddham takes place, when the interval is somewhat less than a degree; at a greater interval there is no conflict at all. This statement of the Sûrya-siddh. is more explicit than our author's; yet it is clear that the asavyam or apasavyam in this chapter is that kind of conflict which oecurs at the greatest interval allowable. About the words apasavya and asavya, see next note.

² Utpala says: अपस्यो -प्रदिचिण उच्यते। समं क्वला दिचिणोत्तरा-वस्थानमपस्यमुच्यते। आचार्येण चन्द्रग्रहसमागमे -पस्यवचणं क्वतं (ch. xviii. 8) शशिनि फलमुदक्खे यद्वहस्योपदिष्टं भवति तदपस्य 6. The Sun, when standing in the meridian, is (compared to) an ally coming to the rescue; when in the east, he is (like a king) staying in town; in the west, he is (a king) marching off. Mercury, Jupiter, and Saturn are always staying in town, and the Moon is always an ally.

सर्वमेव प्रतीपम् इति । ऋमुमेवार्थमृषिपुच श्राह । दि विणेनापसव्यं स्था-दुत्तरेश प्रद्विशम्। यहाणां चन्द्रमा ज्ञेयो नचनाणां तथैवच ॥ This is not difficult to understand, for the moon leaving, in her eastward course, a planet or star at her own right (i.e. standing north from the planet or star), may be said to make a pradakshina; standing to the south, i.e. leaving a planet or star at her left, she makes an apasavya. Thus apasavya means "from the left, at the left," and, in a special application, "at the south side;" but from this it does not necessarily follow that apasavya originally was simply the opposite of savya, "left." Yet it cannot be doubted that they have taken apasavya as the reverse of savya, or, in other words, that apa was understood to mean, not "from, from the side," but "not;" therefore asavya was considered to be simply synonymous with apasavya. Moreover, savya has got the meaning of "right," precisely the reverse of its most common acceptation, viz. "left." Savya, "right," e.g. from hands, arms, etc., as opposite to vāma, "left," occurs, e.g. in Brh. Sanh. li. 41; asavya, "left," 43. Savya, "right," also in Râjaçekhara's drama of Bâlarâmâyana, Act i. 33 (ed. Govinda Deva): वामैराक्रष्य वेगात् प्रगृणितश्चिरसः पा-णिभिः केश्वन्धान् संबैरव्याजशस्त्रप्रण्यनपट्रभिष्टिक्न्द्रतः कण्डपीठीः। Also in the same Act, 47 and 50. Not to be confounded with this acceptation of savya is its use in augury. Applied to augural birds, etc., savya is strictly and properly "left," but as birds first appearing from the left of the observer move in the direction of his right, and keep him at their own right, savya, "left," and pradakshina, "moving to the right," imply the same, without being the same. Utpala remarks: सर्व एव श्कुनादयो यातुर्वामपाश्चीदयत आगत्य दिचणपार्श्वेणा-क्रामन्ति यत् तत् प्रदिचणं सव्यञ्च । एतदिपरीतं दिचणपार्श्वादामपा-र्श्वगमनं यत् तदपस्यम्। In astronomical works स्य "moving (revolving) toward the right," and ऋपसंच्य "moving toward the left," is common enough; e.g. Sûrya-siddh. xii. 55; Siddh. Çirom. Golâdhy. 3, 51; Âryabhafiya iv. 16: देवा: पश्चन्ति भगोनार्धमुदङ्गेवसंख्यितास्तवां। अपसव्यगं तथार्ध द्विण्वडवामुखे प्रेताः ॥ Cf. अपसव्य in B. and R. Skr. Dict. Suppl.

- 7. Ketu, Mars, Râhu, and Venus are marching planets. All the planets, when hurt, destroy, severally, kings coming to the rescue, marching or staying in town. In case of their being victorious, they bestow victory also upon those of their own class.
- 8. When a stationary planet is overpowered by another of the same description, then kings keeping the town will kill others in the same predicament. The Sun produces the same effects on marching chieftains, and the Moon on allies; the same applies to stationary and marching planets.

9. A planet is overcome when he is standing south, rough, quavering, retrograding, small, covered, of unnatural appearance, without brilliancy, and colourless.

10. He is termed victorious when he shows signs the reverse of those aforementioned; also, if he be large, glossy, and brilliant, in spite of his standing south.

11. Where two planets at their conjunction are radiant, large, and glossy, there is mutual love; whereas, in the contrary case, they destroy those who belong to their own party.

12. If, owing to the indistinctness of the tokens, it cannot be made out whether a conflict or a conjunction is taking place, the effects concerning the potentates on earth are said to be equally uncertain.

13. When Mars is overcome by Jupiter, the Bâhlîkas, chieftains taking the field, and people dependent upon fire, are vexed; the Çûrasenas, Kalingas, and Sâlvas suffer from Mars being vanquished by the Moon.

14. Should Mars be defeated by Saturn, citizens (and kings staying in town) are victorious, but the country people cast down; should he be so by Venus, granaries, barbarians, and knights come to grief.

15. When Mercury is beaten by Mars, trees, rivers, ascetics, Açmaka-land, monarchs, the Northerners, and persons initiated for a sacrifice, are to suffer.

¹ The comm. explains कोशागार as अविज्ञाम "a village not received in fief," which implies, I suppose, that such a village is exempt from tributes.

16. In consequence of Mercury being overcome by Jupiter, the barbarians, Çûdras, thieves, wealthy men, citizens, Trigartians, and Pârvatîyas are vexed, and the earth shakes.

17. If Mercury is quelled by Saturn, shippers, soldiers, aquatic products, rich men and pregnant women will suffer; if he is overcome by Venus, fires will rage, and corn, rain-

clouds and marching kings be lost.

18-19. When Jupiter is overpowered by Venus, the Kulûtas, Gandharians, Kaikayas, Madras, Sâlvas, Vatsas, Vangas, cows and grain, are destroyed; so are the Middle country, sovereigns and kine, when Jupiter is defeated by Mars, and the Ârjunâyanas, Vasâtis, Yaudheyas, Çibis and priests, when the same is vanquished by Saturn.

20. But should Jupiter be overcome by Mercury, then the barbarians, truthful persons, swordsmen and the Middle country, will be ruined, apart from the results following

from what has been stated in Chapter XVI. (v. 41.)

21-22. When Venus is defeated by Jupiter, an eminent chieftain on march finds his death, discord reigns betwixt Brahmans and Kshatriyas, and the Rain-god yields no rain; the Kosalas, Kalingas, Vangas, Vatsas, Matsyas, the Middle country, eunuchs and Çûrasenas, suffer severely.

23. In case of Venus being vanquished by Mars, commanders of armies will be slain and kings wage war. If Venus is overcome by Mercury, the Pârvatîyas are lost, the

cows yield no milk, and there is but little rain.

24. By Venus being defeated by Saturn, foremen of corporations, military men, Kshatriyas and aquatic beings are afflicted; moreover, the general effects (taught) in Chapter XVI. take place.

25. When Saturn is subdued by Venus, the prices rise, snakes, birds, and proud men will suffer; likewise the coun-

tries of Țankaņa, Orissa, Kâçi and Balkh.

26. The Angas, merchants, birds, cattle, and elephants will suffer, should Saturn be defeated by Mercury; but should he be so by Jupiter, then countries where women are predominating in numbers, the Mahishakas and Scythians, will be afflicted.

27. Herewith are described the special results of Mars, Mercury, Jupiter, Venus and Saturn, if worsted. The other (general) effects must be determined from Chapter XVI. The more any planet is stricken, the more he will ruin whatever belongs to his department.

#### CHAPTER XVIII.

Conjunction of Moon and Planets or Stars.

1. The Moon, when moving more or less to the north of the stars or planets, *i.e.* keeping them at her right side, brings good to mankind; going at the outside, she is not auspicious.

2. If the Moon stands north from Mars, the Pârvatîyas and commanders of powerful armies will conquer, knights and marching kings be cheerful, and the earth rejoice at the multitude of corn.

3. The Moon, when north from her own son (Mercury), brings victory to chieftains keeping the town, and causes plenty, increases the stores of grain, the happiness of the people, and the treasures of the rulers.

4. When the Moon stands at the north of Jupiter, homestaying monarchs, Brahmans, Kshatriyas, and scholars will thrive, as well as justice and the Middle country; there will be abundance of food, and gladness amongst the subjects.

5. The Moon, in moving north from Venus, makes horses, elephants, and hoarders of wealth thrive. Then, also, chiefs on march and warriors will conquer, and the crops prove most excellent.

<sup>1</sup> Cf. ch. xvii. 5, note, and the following lines:

तथाच वृद्धगर्गः

नचनस्य यहाणां वा यदा तूत्तरतः प्रशी।
तत् प्रद्विणिमित्याङ्गभवित् चैमसुवृष्टये॥
नचनस्य यहाणां वा यदा द्विणतो व्रजेत्।
त्रपसयं सदैव स्थादवृष्टिभयवचणम्॥

6. Should the Moon leave Saturn at her right, then sovereigns keeping the town will triumph, and the Scythians, Bâhlîkas, Sindhians, Pahlavas, and Yavanas be joyful.

7. The Moon profits those chieftains, whether marching or not, those things and countries that belong to the domain of the planet or star to the north of which she happens to move, provided she be unhurt. The same are crushed by

her, if she stands south.

8. All the effects announced in case of the Moon standing north from a planet become inverted when she stands south. Herewith are enumerated the Moon's conjunctions with stars and planets; a hostile conflict between the Moon and planets or stars is wholly out of question.<sup>1</sup>

#### CHAPTER XIX.

The years presided over by each of the Planets, and their results.

1. Everywhere the earth is but scantily covered with corn; the woods are fatally teeming with greedy mordacious<sup>2</sup> animals; in the rivers flows no plenty of water; medicines have almost lost their power.

2. The Sun is scorching hot, even in the cold season; the clouds, although huge like mountains, yield not much rain; the Moon and starry host have lost their lustre; the congregations of ascetics and herds of kine are in dismal condition.

3. Monarchs with irresistible forces, consisting of elephants, horse and foot, with their followers,<sup>3</sup> and with an excellent

¹ Nevertheless, Varâha-mihira himself speaks, in ch. xvii. 6, of Sun and Moon as "an ally coming to the rescue, marching,"etc. Why such incongruities abound in the Sanhitâ has been explained more than once. Utpala remarks: सूर्यस गहैं: सह समागमो न्लामयशब्दवाचाः। भौ-मादीनां परसारं युद्धशब्दवाचाः। इत्यसिक्कास्त्रे सिद्धान्तः। यैसो-क्तमादित्यस जयपराजयं ते गोलवासनावाद्याः॥

<sup>2</sup> In the text r. of course, विभव्यषु.

<sup>3</sup> Comm. नृपानुचरै: सचिवेकोंकपानै:, i.e. "provincial governors, counts."

armament of bows, swords, and clubs, go about destroying the lands by war. Such is the state of things in a year, or month, or day presided over by the Sun.<sup>1</sup>

4-6. In the course of a year ruled by the Moon, the sky is covered with clouds that, showing the dark hue of snakes, collyrium, and buffalo's horn, and resembling mountains in motion, fill the whole earth with pure water and the air with a deep sound such as arouses a feeling of tender longing. The water-sheets are decked with lotuses, nymphæas, and water-lilies; the trees are blossoming and the bees humming in the parks; the cows yield abundant milk; lovers unceasingly delight their delightful paramours by amorous sports; the sovereigns rule an earth rich in (flourishing) towns and mines, in wheat, rice, barley, Kalama rice, and plantations of sugar-cane, whilst she is dotted with fire-piles, and resounding with the noise of greater and smaller sacrifices.

7-9. Most violent fires, aroused by the wind, spread about, threatening to burn villages, forests, and towns; crowds of

¹ This chapter bears a different stamp from those which originally make part of an Indian Sanhitâ. Its subject is treated in the Greek Horâçâstra, but Varâha-mihira judged it to belong rather to the Phalagrantha, i.e. Sanhitâ. We are informed by Utpala that the author himself in a former work (the Pancasiddhântikâ?) had promised to reserve the subject of this chapter for the book he intended to write after finishing his Horâ: आचार्येण पूर्वमेव प्रतिज्ञातमासित् वर्षे ययस फलं मासे च मुनिप्रणीतमालोक्य । तत्तद्वृत्तैर्थच्ये होरातन्त्रोत्तर्वधाने ॥ इति ॥ It is not known which source has been chiefly used by our author in this particular instance; thus much, however, is certain, that long before his time Greek horoscopy had been introduced into India. Utpala quotes Yavaneçvara; तथाच यवनेयर: ।

दिवाकराव्दो रणवियहोयचितीयरसीव्रविषज्वरागिः। अवर्धभुष्तवययात (?) सस्यः प्रचण्डवहृत्युयविषाचिरोगः॥

सम्पन्नसस्येनुप्रश्रस्यशानिः प्ररूढगुन्सो वज्जवर्षवारिः। रसीषधस्तेहपटुप्रसेकशान्द्रो रतिस्त्रीमखवर्धनो ब्द्रः॥

² r. रामा: instead of रामान्.

<sup>&</sup>lt;sup>8</sup> तथाच यवनेश्वरः।

<sup>1</sup> Preferate वातोज्ञत to वातोज्ञत.

men, ruined by the inroads of hordes of robbers and bereft of goods and cattle, ery "Alack-a-day!" throughout the land. The clouds, although bulky in appearance and piled up, yield nowhere rain in great quantity; the corn may shoot out, perhaps, at the boundary, but will wither, and even if it grow up, will be pilfered by others. Kings do not properly attend to their governing duties, bilious diseases prevail, and snakes are raging. Such calamities befall the people, whose crops, moreover, have failed, in a year presided over by Mars.

10-12. Enchantment, magic, jugglers,¹ mines, townspeople, singers, writers, arithmeticians, and military men prosper; monarchs wish to exhibit to each other wonderful and pleasant shows in order to make friends; business in the world is carried on honestly; the threefold science of religion is in a perfect state, and human justice is duly administered, as if by Manu himself. Some apply their minds to the knowledge of the highest Word (and Principle),² or try to attain the highest rank in the study of logic.³ To jesters, envoys, poets, children, eunuchs, perfumers, those that live near dikes, water, and mountains, Mercury brings joy, and to the earth abundance of herbs, in a year or month of his own.

13-15. Continually many sounds emitted by the priests at the sacrifices go up to heaven, rending the hearts of evil spirits, but gladdening the gods partaking of the offerings. The earth is so provided with excellent grain, so teeming with elephants, horse and foot, so stored with wealth and large herds of kine, and so prosperous owing to the protection of her rulers, that her inhabitants seem to vie with the gods in heaven. The sky is covered with many towering clouds, that refresh the soil by raining, and the exceedingly fertile fields produce plenty of corn, in the happy year presided over by Jupiter.

<sup>&</sup>lt;sup>1</sup> Comm. मायाविनां प्रपञ्चनुश्वानाम् । इन्द्रजानज्ञानां विस्वयद्-र्शनानाम् । कुह्नविदामाञ्चर्यप्रदर्शनानाम् ।

<sup>&</sup>lt;sup>2</sup> Comm. केचिद्पध्यात्मविद्यासु योगशास्त्रेषु सक्ताः।

<sup>3</sup> Comm. आन्नी चिकीषु तर्कविद्यासु. Cf. Våtsyåyana on Nyåya-Sûtra i. 1 (p. 3, ed. Calc.).

16-18. Earth is decked with rice and sugar-cane, for the fields are copiously watered by the rain poured from mountain-like clouds; by her numerous tanks adorned with beautiful lotuses, she shines like a woman brilliant with new ornaments. The rulers of the country destroy their powerful enemies amidst the numerous cries of victory resounding in the air. Owing to the protecting care of the kings, the good rejoice and the wicked are put down in the kingdoms where cities and mines are in a flourishing state. At spring-time there is much sipping of sweet wine in company with dear loves, much delightful singing accompanied by flute and lute, much feasting in company with guests, friends, and kinsfolk, and Love's shouts of triumph are ringing in a year ruled by Venus.

19-21. Throughout the course of a year ruled by Saturn the countries are disturbed by unbridled bands of robbers and by many battles, and plundered of cattle and goods; the inhabitants, whose kinsmen have been killed, are sorely crying, and whole families are heavily tried by disease and hunger. The sky shows no clouds, as these are chased by the wind; the soil is covered with heaps of branches torn off; the beams of Sun and Moon are invisible in the firmament, concealed by a dense mass of dust. The reservoirs are without water and the rivers shallow. In some parts the products of the field perish from want of rain; in others they get on (only) after being watered (artificially), as the Rain-god gives but little rain.

22. If a planet is small, with faint rays, standing in his lowest mansion, or overcome, he produces no full effect; in the contrary case, he causes great prosperity. The evil effects of a month increase in an evil year; the same applies to the good effects; should the one neutralize the other, then the results are trifling.

¹ The compound दुष्ट्विन्छ्वर्ग is irregular, inasmuch as it ought to be विन्छदुष्ट्वर्ग. The same irregularity is met with also in Mrcchakati (p. 10, ed. Stenzler), where र्त्तोत्पलप्रकर्जुज्ञान्तुन्त्री has the meaning of र्त्तोत्पलजुज्ञान्त्रम्. In both instances grammar has been sacrificed to the exigencies of prosody.

#### CHAPTER XX.

#### The planetary triangle.

1. In any quarter where all the planets together either appear or set heliacally, will be danger from the raging of the sword, from famine, and calamities.

2. The configurations termed discus, bow, triangle, staff, town, dart, and thunderbolt, bring famine and drought to

mankind, and promote war.

3. In any quarter where a cluster of planets is seen at sunset, there will be another king and great calamity from

foreign hosts.

4. When planets come together in one asterism, they will be fatal to the people standing under that asterism's influence, but auspicious to the same if they shed bright rays and do not occult one another.

5. I shall now describe the tokens and effects of the (six) constellations, called planetary concourse, gathering, tarnish-

ing, meeting, encounter and fellowship.2

6. The conjunction of four or five planets, marching or stationary, in one asterism, is styled a "concourse." If combined with a comet or Râhu, it becomes a "tarnishing."

7. When a stationary planet comes together with another stationary planet, or one on march with another of the same description, the conjunction is named a "meeting." When another accedes to the conjunction of Saturn and Jupiter, there is a "fellowship."

8. One (of two planets in conjunction) rising (heliacally) from the south, and the other doing so from the east, make an "encounter." In a "gathering" the planets are auspi-

1 According to ch. xiv. and xv.

<sup>&</sup>lt;sup>2</sup> Koça, "fellowship," especially secret fellowship, or the German Brüderschaft, also Rajatarangini 5, 325; pitakoçāh are those who have drunk the cup of secret fellowship.

<sup>3</sup> The definition is simply omitted. Utpala: एतेषां पञ्चानां संस्था-नानामभावे यो ग्रहसंयोगः स ग्रहसमागमं द्ति च्चेयः॥

cious if they be large, resplendent, and natural in appearance.

9. The constellations termed "concourse" and "gathering" are indifferent; "tarnishing" and "fellowship" are dangerous to the people; the "meeting" is said to be good middling; but at "encounter" one may with certainty expect the raging of hostilities.

#### CHAPTER XXI.

## Pregnancy of the Clouds.

1. Since food is the world's life and dependent upon the rains, the setting in of the rainy season deserves to be carefully investigated.

2. Having read the works composed by Garga, Parâçara, Kâçyapa, Vâtsya,¹ and other sages, in which the symptoms of the future setting in of the rains are described, I now proceed to treat this and it.

ceed to treat this subject.

3. The prediction of an astrologer who day and night attentively watches the signs of the pregnancy of the clouds, will prove true like that of a sage, when he determines the fall of rain.

4. Indeed, is there any science that could surpass this, by knowing which one becomes a seer of past, present, and future, even in this time of perdition, the Iron Age?

5. Some 2 say that the days of pregnancy begin after the end of the light half of Karttika. This, however, is not the

opinion of the majority. I will tell Garga's opinion.

6. In the (first) days after the first of the light half of Mârgaçîrsha, or at the time of the Moon's conjunction with Pûrva-Ashâdhâ (after that date), the symptoms of the pregnancy of the clouds ought to be observed.

<sup>1</sup> Another reading has Vajra.

<sup>2</sup> Comm. सिडसेनाद्यः ॥ तथाच सिडसेनः गुक्षपचमतिक्रम्य कार्त्तिकस्य विचारचेत्। गर्भाणां सभावं सम्यक् सस्यसम्पत्तिकार्कम्। 7. The fœtus formed during the Moon's stay in a particular asterism will be born 195 natural days hence, the Moon standing again in the same asterism, according to the laws of her revolution.

8. The fœtuses of the light half come out in the dark half, those of the dark in the light half, those of day-time at night, of night at day-time, of evening twilight at dawn, of dawn

at twilight.

9. The fœtuses from Mârgaçîrsha and the light half of Pausha are of little consequence. The dark fortnight of Pausha corresponding to the time of conception, the light half of Çrâvaṇa may be fixed upon as the period of birth.

10. The fœtuses from the bright half of Magha are born in the dark fortnight of Çrâvana. The former part of Bhadrapada may be fixed upon as the period of birth corresponding

to the dark half of Mâgha.

11. The fœtuses conceived during the bright fortnight of Phâlguna are to come out in the latter half of Bhâdrapada; but those from the dark fortnight are born in the former half of Âçvayuja.

12. The fœtuses from the light fortnight of Âçvayuja will be produced as rain in the dark half of Âçvayuja; those coming into existence during the dark part of Caitra fall

down as rain in the light half of Kârttika.1

13. The cloud embryos formed in the eastern quarter will issue in the west, those formed in the west will issue in the east. In like manner the other directions and the winds are reversed (at the two periods compared).

14. (Good symptoms, generally, are:) A refreshing soft breeze from the north, north-east or east; a clear sky; a Sun or Moon surrounded by a sleek, bright, and thick halo.

15. A sky covered with large, bulky, smooth or needle-

## ¹ तथाच गर्गः।

माघेन त्रावणं विन्दात्तभस्यं फाल्गुनेन तु । चैचेणात्रयुजं प्राङ्गवेँप्राखेन तु कार्त्तिकम् ॥ सुक्कपचेण क्रष्णन्तु क्रष्णपचेण चेतरम् । राचाह्रोस्र विपर्यासः कार्यः कालविनिस्रये ॥ like, stratified red clouds, or such as show the hue of crows' eggs or a peacock's neck, when the Moon and Stars are shining brightly.

16. A rainbow, rumbling of thunder, lightning, a mock sun, beautiful twilight, troops of birds and wild deer emitting auspicious sounds from the north, north-east, or east;

17. The planets large, beaming brightly, moving at the north (of the asterisms) and unhurt; trees with shoots un-

impaired; men and quadrupeds merry:

18. Such are the general symptoms announcing the prosperous development of all rain-embryos. There are, however, some special rules arising from the particular nature of the season, which I am about to propound forthwith.

19. (Good symptoms are:) In the months of Margaçirsha and Pausha a red glow of the horizon at morn and evening, clouds and halos, not too severe a cold in Mârgaçîrsha, and

not too much snow in Pausha.

20. Happy tokens in Mâgha are: a strong wind, a sun or moon dim by hoar frost, great cold, and a sun rising or setting with clouds.

21. In Phâlguna are auspicious: a rough, violent gale, thick clouds showing a smooth surface, halos broken off, and a russet or red sun.

22. In Caitra fœtuses forming among wind, clouds, rain and halos are of good augury; in Vaiçâkha, such as are attended with clouds, wind, rain, lightning, and thunder are favourable.

23. Clouds that at the period of embryo formation show the colour of pearl or silver, or the hue of Tamal, blue lotus or collyrium, or those that resemble aquatic animals, contain copious rain.

24. Clouds shone upon by sharp sunbeams and riding on a soft breeze will, at the time of birth, pour out water, as if

with a vengeance.

25, 26. The signs of the miscarrying of the fœtuses are meteors, thunderbolts, dense dusk, red glow of the quarters, earthquake, Fata Morgana, opaceous wedges (appearing on the Sun's disc), comets, planetary war, tornados, a portentous rain of blood or the like, a cloudy bar crossing the Sun's disc, a rainbow, an eclipse: by these and similar portents of three kinds 1 an embryo gets destroyed.

27. Signs precisely the reverse of those, both general and special for any particular season, by which the growth of an

embryo is assured, produce the contrary results.

28. A fœtus commencing its development at (the Moon's standing in) the first and second Bhadrapadâ, first and second Ashâḍhâ and Rohiṇî, in whatever season it may happen, will yield much rain.

29. An embryo formed at Çatabhishaj, Açleshâ, Ârdrâ, Svâti and Maghâ is said to occasion fertility for many days, if unimpared; but it will be disastrous, if hurt by portents

of three kinds.

30. Fœtuses coming into being at (the Moon's conjunction with) one of the aforesaid asterisms during the months of Mârgaçîrsha, Pausha, and the four following, will produce rain (after 195 days) for eight, six, sixteen, twenty-four, twenty, and three days severally.

31. If the asterism is occupied by an evil planet, the embryos will result in hail, thunderbolts, and rain of fishes; but if the Sun or Moon be in conjunction with or looked at

by a benign planet, in copious showers.

32. Too much rain, without apparent cause, at the forming of fœtuses, tends to their destruction; if the quantity of rain fallen (as measured in a basin used for the purpose)<sup>2</sup> exceeds

an eighth of a Drona, the fœtus gets dissolved.

33. If a fœtus, prosperous in other respects, is, at the time of birth, prevented from producing rain in consequence of planetary and other evil influences, it will (afterwards) give rain mixed with hail, and that at the same period as when it first developed.

34. As the milk of the milch cow grows hard, if retained too long, so does the water, kept back beyond its time.

35. An embryo, if attended with five phenomena,3 will

<sup>1</sup> To wit, celestial, atmospheric, and terrestrial; cf. ch. xi. 2; xlvi. 2.

<sup>2</sup> See ch. xxiii. 2.

<sup>&</sup>lt;sup>2</sup> Viz. wind, rain, lightning, thunder, and clouds; see ver. 37.

extend its rain over a hundred *yojanas*, and for every phenomenon less, over half the extent of the former, but, if it has only one concomitant, over five *yojanas* around.

36. The quantity of rainfall will at the season amount to a Drona (in basin measure), if the embryo has five concomitants; three Adhakas are the results of wind, six of lightning, nine of clouds, twelve of thunder.

37. An embryo has five concomitant signs, if it developes amidst wind, rain, lightning, thunder, and clouds. Such a one brings much rain. One which at the time of formation loses too much water, produces at the period of birth a drizzling rain.<sup>2</sup>

#### CHAPTER XXII.

## Pregnancy of the Air.

1. The eighth, ninth, tenth, and eleventh days of the bright half of Jyaishtha are the days of the air's pregnancy, which are auspicious if the breeze is gentle and favourable, and the sky covered with smooth clouds.

2. Should it rain during those days at (the Moon's con-

<sup>1</sup> Consequently, fifty, twenty-five, and twelve and a half yojanas.

<sup>2</sup> Sâyaṇa, in his comment on Rg Veda 1, 6, 4: ऋदह स्थामनु पुनर्गभेत्मिरिरे। द्धाना नाम यिद्यम् ॥ alludes to the formation of rain-embryos in explaining garbhatvam erire by meghamadhye jalasya garbhākāram preritavantah. For eliciting this meaning he must have recourse to the quite fanciful and unwarrantable supposition that erire implies, though not formally expresses, a causative sense. But it is sufficiently clear that garbhatvam er is only a variation of such common expressions as garbhatvam dyā, āgam, āpad, or yā, gam, or upayā, upagam, etc. Garbhatvam erire is, according to English idiom, simply, "they became garbhas." The Maruts become garbhas again, in other words, "retire to their place of birth" (mythologically, Priçni's womb, e.g. R. V. 6, 66, 3), or "disappear." The whole verse in English is: "And after they disappeared again of their own accord, rendering their name to be revered."

junction with) Svâti, Viçâkhâ, Anurâdhâ and Jyeshṭhâ, then the rain-embryos,¹ melting away, are lost for the months of Çrâvaṇa, Bhâdrapada, Âçvayuja and Kârttika, successively.

3. The four days mentioned are lucky if uniform, but bode no good if varying, in which latter case they are stated to bring danger from robbers. Let me quote the following stanzas of Vasishtha's:

4. "Such days of pregnancy as are accompanied by lightning, trickling drops, masses of dust and wind, the Sun and Moon being overcast, contain in them the germs of happiness.

5. And when most splendid flashes of lightning keep near the good regions (viz. north, north-east, and east), then also the discriminating observer may announce the prosperous

growth of all products of the field.

6, 7. A rain of dust and water; gentle motions of young children; good-sounding notes of birds and their frolicking in dust, water and the like; halos, sleek and not too much impaired, round the Sun and Moon: from such signs is to be anticipated with certainty a (future) rain promoting the growth of all products of the field.

8. If the clouds are sleek, compact and tending to turn from east to south, there will be a plenteous rain, causing

the full development of all crops."

#### CHAPTER XXIII.

## Prognostics for the Quantity of Rainfall.

1. From the quantity of rain falling at (the Moon's conjunction with) Pûrva-Ashâḍhâ, etc., directly after the day of full moon of Jyaishtha, should be told by the experts the

<sup>1</sup> Dhdrand, agreeably to its grammatical form, properly means "bearing" and "womb," but in the same manner as racand, properly "composing," has got the passive notion of "composition," so dhdrand may have been taken in the passive sense of "what is borne." In no other way can I account for its construction with parisruta, which applies also to receptacles, wombs; but in this instance dhdrand hardly denotes that which contains the embryo.

quantity of water (to be expected) during the rainy season, along with the good or evil omens.

2. The quantity of water must be determined by taking a basin, a hasta (cubit) in diameter, for hydrometer. Fifty Palas are equal to one Adhaka, by which standard the water that has fallen is to be measured.

3. The prognostication of the quantity of rain is to begin as soon as there has been rain sufficient to make impressions

in the soil 1 or leave drops on the grass sprigs.

4. Some say (that the measure is to be taken), whatever may be the extent of land rained upon; others propose a region of ten *yojanas* around; the opinion of Garga, Vasishtha and Parâçara is that the circle shall be one of twelve *yojanas* at the utmost.

5. Generally it will rain again (in the season) at (the Moon's conjunction with) that same particular asterism (Pûrva-Ashâdhâ, etc.), at which some (previous) rain has been falling. If it does not rain at Pûrva-Ashâdhâ and the rest, there will be no rain at all (during the season).

1 In the printed text धरित्री is erroneously separated from मुद्रा (i.e. मुद्राः).

² Utpala: केचिन्नुनय: काञ्चपप्रभृतयो यथाभिवृष्टं यावत्तावन्मात्रं वृष्टं कथयन्ति । प्रवर्धणकाले यथातधैकिन्निन्निप प्रदेशे वृष्टे वर्षाकाले शोभनं वर्षं पूर्वीषाढादियाह्यम् । तथाच काञ्चपः

प्रवर्षणे यथादेशं वर्षणं यदि दृश्वते। वर्षाकालं समासाय वासवो वज्ज वर्षति॥

<sup>3</sup> Comm. ऋन्य देवलादयः। प्रवर्षणकाले दश्योजनके वृष्टे वर्षाकाले म्बुक्यनं ("the quantity of rain to be announced for the rainy season") नासादूनमिति। तथाच देवलः

प्रवर्षेणे यदा वृष्टं दश्योजनमण्डलम्। वर्षाकालं समासाय वासवो वज्ज वर्षति॥

' तथाच गर्गः

खषाढादिषु वृष्टेषु योजनद्वादशात्मे । प्रवृष्टि शोभनं वर्षे वर्षाकालं विनिर्दिशेत्॥ 6-9. The quantity of rain at the asterisms Hasta, Pûrva-Bhadrapadâ, Mṛgaçiras, Citrâ, Revatî and Dhanishthâ is stated to be (normally) 16 Droṇas; at Çatabhishaj, Jyeshthâ and Svâti 11; at Kṛttikâ 10; at Çravaṇa, Maghâ, Anurâdhâ, Bharaṇî and Mûla 14; at Pûrva-Phalgunî 25; at Punarvasu 20; at Viçâkhâ and Uttara-Ashâdhâ 20; at Açleshâ 13; at Uttara-Bhadrapadâ, Uttara-Phalgunî and Rohinî 25; at Pûrva-Bhadrapadâ and Pushya 15; at Açvinî 12; at Ârdrâ 18 Droṇas, provided all these asterisms are free from baneful influences.

10. The asterism being vexed by the Sun, Saturn, a comet, or hurt by Mars, or portents of three sorts, there will be no weal, nor rain; but good will ensue, if the same is in con-

junction with a benign planet and unscathed.

#### CHAPTER XXIV.

The Moon's Conjunction with Rohini.

1-3. On the top of the mountain where the gods have their abode, the parks of which resound with the humming of the bees upon the blossoms of the trees grown in the dells of the golden hills, and ring with the bustle of many birds and the sonorous notes of the song of Heaven's nymphs,—there it was that Bṛhaspati told the matters concerning the Moon's conjunction with Rohiṇî. Having duly taken cognizance of them, as well as of those taught by Garga, Parâçara, Kâçyapa and Maya to the crowds of their pupils, I shall attempt to treat of the same subject in a (comparatively) short composition.

4. It is by observing Rohinî in conjunction with the Moon in the dark half of Âshâḍha, that the astrologer must predict weal or woe, according to the teachings of authorita-

tive works.

5. How a future conjunction can be foretold has been shown by me in my Treatise under the head of "Conjunction with Fixed Stars." The practical results, however, must be set forth as deduced from the Moon's (apparent) size,

brightness, colour, road, and also from omens and the direction of wind.

6, 7. The divining Brahman, going to a spot north or east from the town, staying there three nights, attentive to the holy fire, is to draw a diagram of the planets and cluster of asterisms, and worship them by oblations with incense and flowers. He must occupy the sacred plot strewn with sacrificial grass, and adorned, at the four quarters, with vessels kept clean, and not blackened at the bottom, filled with gems, water, and herbs, and covered above with sprouts of trees.

8. After taking all sorts of seeds, while delivering the Mahâvrata prayer, and putting them in a pot, he must immerse them in the water mixed with sacrificial grass and gold. Thereupon an offering with prayers to the Maruts,

Varuna and Soma (i.e. the Moon).2

9. He should prepare a thin, black streamer, four hastas (cubits) long and three times as much raised above the ground. Having first ascertained the precise direction of the quarters, he should by means of that instrument observe the wind during the Moon's conjunction.

10. For prognostics of the rains, the watches ( $\frac{1}{8}$  of the day) ought to be counted as corresponding to as many half-months,

1 The comm. intimates that tryahoshita implies fasting: द्निचय स्थितस्त्रचच क्रतोपनासः। तथाच गर्गः

> नगरादपनिष्त्रस्य दिशं प्रागुत्तरां शुचिः। विविते प्रस्थे देशे देवतायतने गपिवा॥ राज्ञा नियुक्तो देवज्ञः क्रतशीचो जितेन्द्रियः। निमत्तत्रुश्लो धीरः शुक्तास्वरसमावृतः। उपवासमथातिष्ठेद्दृष्टमीं संश्तित्रतः॥ ततो ग्ष्टस्याः परे यिस्सिन्दिने संयुक्यते शशी। प्राजापत्थेनच ततो निमित्तान्युपज्जयेत॥

<sup>2</sup> The Comm. mentions a r. होस्यस्त्री, which cannot be but a superficial innovation by some one whom the construction struck as very abrupt. The common r. is undoubtedly right, because a prayer to the Maruts may not be omitted from the ceremony.

and the subdivisions of a watch as answering to days. The wind when tending to veer round from east to south is favourable. A wind is "steady" if it is constant.

11. As for those seeds kept in the waterpot, such as have sprouted at the end of the conjunction will grow prosper-

ously, and that for such a part only as has sprouted.

12. The air resounding with the cries of tranquil (i.e. not vexed) birds and animals, a clear sky and a favourable wind, are blessed signs at the Moon's conjunction with Rohinî. Forthwith I will tell the effects of the clouds and wind.

13. Big clouds that, resembling snakes, some of whom are coiled, others showing only their bellies, others again their backs,<sup>2</sup> appear somewhere spotted, elsewhere white, at other places again dark, while surrounded by glittering flashes of lightning which cover the heavens.

14. Or the sky is studded, as it were, with variegated clouds fair as the calix of the expanded lotus and tinged at the outer edges by the gleam of the morning sun, or showing the dark

lustre of bees, saffron, the blossom of Butea frondosa.

15. Or the firmament is occupied by gloomy clouds and illumined at the same time by flashing lights and a rainbow, as if it were a forest that, crowded with elephants and buffalos, stands in full blaze.

16. Or the canopy is shrouded by clouds bearing likeness to mounds of collyrium or imitating the brightness of snow,

pearl, mussel-shells and moonbeams.

1 i.e. the wind being favourable during the first watch, rain will fall during the first half of Çrâvaṇa; in the contrary case, there will be no rain during the same period; and so forth. यिस्त्रहोराचे रोहिखा सह चन्द्रमा युज्यते तच सूर्योदयात्रभृति प्रथमं प्रहरं यावच्छोभनो वातो वहति। तदा श्रावणस्य प्रथमपचं देवी वर्षति। श्रुभे वाते न्ना-वृष्टिस्तचेव वक्तव्या। एवं दितीयप्रप्रहरे शोभने वाते वहति श्रावणस्य दितीयं वचं वर्षति। तृतीये माद्रपदस्य प्रथमपचम इ॰श्रा॰। प्रहरेण यदि पचं तत् प्रहराधेन सप्त सार्धानि दिनानि। प्रहरचतुभागेण पा-दोनानि चलार्यवमादि॥

<sup>&</sup>lt;sup>2</sup> The belly of the snake is fair, the back dark.

17. Or it is decked with clouds dark like Tamâl or bees, and comparable to elephants, having lightning for golden girdles, (white) cranes for prominent tusks, trickling rain for frontal juice, the moving extremities for trunks, the varicoloured rainbow for a banner erected by way of ornament.<sup>1</sup>

18. And also when heaps of clouds, in a sky tinged red by the gleam of dawn and twilight, show the deep hue of blue lotuses, or when they appear to have appropriated to them-

selves the lustre of Hari (the Sun) clad in yellow.

19. If clouds with (alternately) deep and sharp sounds that blend with the cries of peacocks, câtaka-birds, and frogs, stretch all over the sky, hanging down to the horizon, they will pour on the earth a flood of rain.

20. If the heavens are occupied by a multitude of suchlike clouds as described, during three days, or two, or one day, there will be plenty of rain, abundance of food, and

gladness among mankind.

21. Neither good nor rain is to be expected from clouds rough, small, shattered by the wind, noiseless, and resembling camels, crows, spectres, monkeys, or other sinister creatures.

22. The Sun darting fierce rays in a cloudless sky brings rain; so, too, a nightly canopy bright with stars like a lake

that, abounding in white lotuses, shines in full bloom.

23. Clouds coming up from east make the field products ripen; those which arise from south-east cause the raging of fires; by those which come from the south, the corn is ruined; by clouds issuing from south-west, the prices go down; 2 clouds which originate in the west bring a choice rain.

24. Clouds looming up from the north-west result in a rain seconded by a strong wind, and that only here and there; a thick rain follows upon clouds in the northern region; exceedingly good corn may be expected from clouds gathering to the north-east. The wind, too, in the different quarters, produces similar results.

25. Falling meteors, lightning, thunderbolts, red glow of

¹ Comm. उपरिध्वजं नृपगजानां भवति।

<sup>2</sup> Comm. r. अर्ध "half," viz. of the crops, which r. seems preferable.

the horizon, tornados, earthquakes, and sounds of wild deer and birds, should be observed, as well as the clouds.

26. The water-jars spoken of before, placed north, east, etc., and marked with the names (of the quarters), foreshow the months of Çrâvaṇa, Bhâdrapada, and so forth. If a jar proves full, the month denoted by it will yield rain; if empty, there will be no rain; if diminished in volume of water, one must make a calculation in proportion.

27. By means of water-vessels marked with the king's name, and others marked with the names of the quarters, should be foretold the fortunes (of the king and members of the four classes), in proportion to the pots being broken,

empty, diminished, or quite full.

28. If the Moon, while standing on the northern road, either far off or near, makes her conjunction with Rohini, one may decisively announce nothing but woe to mankind in every way.

29. If the Moon, trenching on Rohini, moves northward, there will be a good rain, but, at the same time, numerous disasters. By entering into conjunction from the northward, without touching, she produces plenteous rain and blessing.

30. Should the Moon take her stand in the midst of Rohini's wain,<sup>2</sup> men, having no drink but water from sun-heated vessels, and rendered helpless, run about, the little children begging them for food.<sup>3</sup>

31. If Rohini goes after<sup>4</sup> the Moon-god just rising, then good ensues, and maidens, love-sick, wholly yield to their

lovers' power.

32. Should the Moon-god follow Rohinî from behind (i.e. from the west), like a wooer his dear love, then men, wounded by Cupid's shafts, will stand under the sway of womankind.

<sup>1</sup> स्त in the text is, of course, a misprint for स्ती.

<sup>&</sup>lt;sup>2</sup> See ch. ix. 25, footnote.

<sup>&</sup>lt;sup>3</sup> This means, in common prose, that there is drought, and in consequence thereof hard times.

<sup>&</sup>lt;sup>4</sup> i.e. if Rohim at the Moon's rising is seen at the west side. Comm. पृष्ठतः पश्चाद्रोहिणी एति गच्छति समुद्दित ।

33. When the Moon stands south-east from Rohinî, there is to be great calamity; when south-west, the products of the field, smitten by land-plagues, are lost; when north-west, the gathering of grain is middling; when north-east, there are to be many advantages, good growth of the products, higher prices fetched, and the like.

34. It may happen that the Moon touches the junction star, or that she screens it by her disc. At the former contingency they assert the peril to be dreadful; at an occultation, the

king is killed by his wife.

35. If at the time of the cows coming home, a bull, or even any black beast, takes the lead, there will be much rain; if the animal be black and white, the rain is middling in quantity; and if white, there will be no rain at all. A proportionate estimate (of rain to be expected) is to be made with cattle of other colours.

36. If the Moon, when in conjunction with Rohinî, is not seen in the overclouded sky, great danger from sickness is imminent, but, at the same time, the earth will be provided with plenty of water and grain.

#### CHAPTER XXV.

## The Moon's Conjunction with Svâti.

- 1. The same effects as at the conjunction with Rohinî has the Moon's conjunction with Svâti and Ashâḍhâ, which all of them ought to be observed in the bright half of the month of Ashâḍha. How far there is a difference, I am now going to set forth.
- 2. If it rains in the first part (terce) of night (during the Moon's stay) in Svâti, all field products will thrive; if in the second part, sesamum, beans, peas; if in the third, there will be summer corn, but no autumnal growth.
- 3. Rain falling during the first part of the day produces excellent rain (for the future); that which comes in the second part brings the same, but insects and snakes too.

<sup>1</sup> Comm. हागादिनः.

Moderate rain will result from rainfall during the last part. If it rains both day and night, there will be (afterwards) an uninterrupted rain.

4. There is a star due north of Citrâ (Spica Virginis), called Apâmvatsa.¹ The conjunction with Svâti taking place when

the Moon is not far from the said star, is beneficial.

5. If on the seventh day of the dark half of Mågha snow falls, the Moon standing in Svåti, or if the wind is vehement, or a rainy cloud is incessantly rumbling; or if the heavens, wherefrom sun, moon, and stars, have disappeared, are scattered over with garlands of lightning, one may be sure that the rainy season will be rich in all sorts of crops, so as to gladden the country people.

[6. In the same manner one must consider the Moon's conjunction with Svåti, when occurring in the month of Phâlguna. Caitra, or dark half of Vaiçākha, and particularly in

Âshâdha.]

#### CHAPTER XXVI.

#### The Moon's Conjunction with Ashâdhâ.

1. At the time of full moon in Ashadha, some seeds, weighed in equal portions, should be kept for a night.<sup>2</sup> Such seeds as prove the next day to have increased will thrive; such as have diminished will not flourish. The spell used as incantation to the balance is as follows.

2. "To be praised by the spell is Sarasvatî,3 the truthful goddess. Thou shalt show the truth, O truthful goddess!

for true are thy decrees;

3. As infallibly as Sun and Moon, planets and hosts of

<sup>1</sup> From this statement, compared with Sûrya-siddhânta viii. 21, we must infer that Apâmvatsa (i.e. the Little one of Âpas) is the small star between Spica Virginis and  $\zeta$  Virginis (Âpas) The maps consulted by me show the star, but no indicatory letter.

<sup>2</sup> Comm. श्रधिवासितानि महाव्रतेन मन्त्रेणाभिमन्त्र्य रात्रिमेनामु-

<sup>3</sup> Sarasvatî or Vâc is not only word, speech (Lat. oratio) personified, but also oracle (oraculum). Cf. xlvii. 98; lxxxviii. 42.

stars, in this world, rise in the east and go a-setting in the west,

4. May also now appear the Truth, that Truth which is in all the Vedas, in the Brâhmaṇas, in the three worlds!

5. Thou art Brahma's daughter, and celebrated as the child of Aditi, and thou art also of the family of Kaçyapa, thou, far-famed under the name of Tulâ!"

6. Each of the two scales 2 should be of linen cloth, six digits long and wide, fastened with four strings. The strings are ten digits long, and the cord by which the balance is held 3 in the midst of the two scales only six digits.

7. In the southern scales must be laid gold and in the northern one the other substances, as well as water. Water from wells, streams and lakes indicate (in prognostication) little, moderate and excellent rain, (severally).

8. Elephants are indicated (in prognostics) by ivory;

It is not clear by virtue of what function Sarasvati is identified with the Balance. Maybe that Sarasvati in older times had the attributes of the Greek goddess Themis. To explain the cosmical function of the goddess is no less difficult. Since Tulâ (i.e. an attribute or part, ança, of Sarasvati) is the daughter of Aditi (i.e. Not-light), and of the family of Kaçyapa (i.e. Crepusculum), she may denote the horizon, the limit between day and night; hence the words in v. 3. About Aditi and Kaçyapa, of. preface to the text, p. 41. I will add here that Aditi is the same idea as in the later Sanskrit adrshta, the unseen, highest power or eternity. It is a general rule that the "unseen" is higher than the "visible," the latter being only a part (ança) of the former. Therefore Krshna is higher than Arjuna, though both are essentially the same and inseparable.

² i.e. the receptacles wherein the things to be weighed are put. Comm: यत्र खितानि द्रयाणि परिच्छियने तच्छित्यक्तम्।

<sup>3</sup> Comm. कचाभ्रव्देन ग्रहणसूचमुच्यते।

<sup>4</sup> Comm. तथाच पराश्ररः

सार्ने न्यसि सस्यानां राज्ञाञ्च विजयो निधिने। नादेये मध्यमा सम्यत् कनीयस्ववटोद्ने॥ यस्यां दिशि भवेन्यास्यमस्तानं शुचिगन्यवत्। तस्यां दिशि विजानीयाद्राज्ञां शिवमनामयम्॥ cows, horses and the like by hair from the same animals; kings by gold; Brahmans, Kshatriyas, etc., as well as countries, years, months, quarters of the horizon, by wax. Other substances point only to their own sort.

9. The very best balance is one made of gold; one of silver is middling. In case these are not procurable, one should make one from Acacia Catechu, or from a shaft by whom a man has been wounded. The measure is a span (=12 digits.)

10. Such substances as, being weighed, prove to have diminished in weight, will be lost; such as have increased will thrive; such as continue in the same condition will but indifferently come on. This is called the mystery of weighing with the balance, which one may apply also at the Moon's conjunction with Rohinî.

11. Evil planets standing in Svâti Ashâdhâ or Rohinî, are mischievous. If an intercalary month (intercalary Ashâdha) is the cause that there are two conjunctions, one should, after devotional fasting, observe both conjunctions.

12. If all three conjunctions point to the same results, one may confidently predict the latter; in the contrary case, however, the influence of Rohinî must be stated as being predominant.

13. Accordingly as the wind happens to be east, southeast, south, and so forth (during the conjunction with

1 Utpala: तथाच गर्गः

# यस्य प्रणमते सारं ते भवन्तिच तां समाम्। येषानु हीयते सारं तेषां नाग्रं विनिर्दिग्रेत्। समानि तु समानि सुस्तुलया तुलितानि तु।

<sup>2</sup> This koça, or rather kosha, is derived from kush, kushndti, in the sense of nishkarsha, i.e. "to weigh." In the Dhâtumanjarî (ed. Bombay, 1865), the example given is: जुणाति खणे खणेजार: with the derivative जोष:. Cf. B. and R. Skr. Dict. under जुण, अनुज्य = अनुत्वयति and अवजुष् = अवत्वयति. Apparently a different word is koça, kosha, "the interior of something, calice, case," which is etymologically identical with English house, whence follows that the orthography and pronunciation koça, though Vedic, is as far removed from the original form as çvaçura, çushka, etc.

Ashâdhâ), the consequences are (successively): good harvest, raging of fires, little, middling, very good rain, much rain, seconded by wind, abundant and good rain.

14. If after the full moon of Ashâdha, on the fourth day of the dark half, at the asterism of Pûrva-Bhadrapadâ, the Rain-god pours his showers, the rainy season is favourable; otherwise not.

[15. If at full moon of Ashadha there is a north-easterly wind at the time of sunset, the produce of the crops will be excellent.]

#### CHAPTER XXVII.

#### The Wind Circle.

- [1. When an easterly wind 1 blows from heaven, rolling on, dashing the tops of the eastern ocean's billows, at the same time clashing with the dense beams of Sun or Moon, then one may be sure that the earth, covered by a roof of dark clouds extending all around, will abound in autumnal field products, and her surface be adorned with luxuriant vernal 2 corn.
- 2. When at the period of the conjunction (with Ashâdhâ) a south-eastern wind, battering the peaks of the Malaya mountains,³ blows at the time the Day-god is about to disappear, then the earth, in continual blaze from the flames sweeping along her surface, emits (as it were) a heap of ashes along with the glowing sighs heaving up from her body.
- 3. When at the said conjunction a very rough, blustering south wind flutters through the leaves of the corypha, the awnings of creepers and trees, making the monkeys dance, then the clouds, rising with great difficulty, and rubbed as

On the day of full moon in Âshâdha, it is to be understood, here and in the sequel.

<sup>&</sup>lt;sup>2</sup> वसन्त in the printed text is an error for वासन्त.

 $<sup>^3</sup>$  An error, committed also by Subandhu, in his Våsavadattå (p. 196, sq. ).

elephants by the sharp points of the Tâl,1 niggardly yield

but few water-drops.

4. When unremittingly a south-west wind hovers at sunset, tossing up and down in the sea heaps of small cardamoms, averrhoas and cloves, then the earth, decked by a heavy load of scattered broken bones of men who have perished by hunger and thirst, appears wild and restless, like a spouse maddened by grief at the loss of her husband.

5. When there is a strong gale from the west about sunset, stirring every now and anon with heavy squalls, and hurling up the dust, then the earth, albeit stored with grain, will have to sustain the battles of mighty monarchs, and show

everywhere an unbroken row of flesh, fat and blood.

6. If at full moon in Ashadha a north-west wind blows about the time of sunset, vehement in his course like an eagle, one may be certain that earth, glad of the briskly-falling drops of rain, and noisy with the loud sounds of the frogs, and showing everywhere the brilliant verdure of the corn-fields, will, for the multitude of pleasures, seem to possess the fullness of blessings.

7. And when, at the end of summer, a northerly breeze is blowing, fragrant with the sweet-scented flowers of Nauclea Kadamba, while the sun's crown of rays is screened by Mount Meru, then the clouds, enraged that by the roaming flashes of lightning all becomes illuminated, will fill, as in a fury, the earth with showers, by which the lunar beams are

concealed.

8. When there is a blustrous north-easterly wind, cool, courted by the gods and scented by the blossoms of Punnâg, agallochum and Pârijâta, then earth, restored to youthful vigour by the abundance of water, will have a profusion of ripe grown corn; the sovereigns will curb their foes and protect the classes of society with the utmost justice.]

<sup>1</sup> The poet quibbles upon tala, "Borassus flabelliformis," and "flap, slap."

#### CHAPTER XXVIII.

## Foretokens of Instant Rain.

- 1. If in the rainy season the Moon, occupying an aquatic asterism of the ecliptic, at the time of prognostication, is on the horizon, or, during the bright month-half, in the fourth, seventh, or tenth mansion, she will presently send forth water, and that in great quantity, if she be looked at by benign planets; in little quantity, if looked at by evil ones. Venus does the same when under the same circumstances.
- 2. If the person inquiring touches any wet object or water, or anything termed after water, or if he stands near water, or is about to do some humid work, or if at the time of consultation the word "water" is being heard, the inquirer may be sure that without doubt it is going to rain very soon.
- 3. When the Sun, in the rainy season, dazzling by extreme splendour, while lingering on the Mountain of Sunrise, shines like molten gold or lustrous beryl, he procures rain on the same day. So, too, when, high in the meridian, he is darting forth most keen rays.
  - 4. The water tasteless, the sky coloured like cows' eyes or crows' eggs, the air serene, moisture of salt, calmness of wind, much tumbling of fishes ashore, repeated croaking of frogs, these are tokens of coming rain.
  - 5. Cats strongly scratching the ground with their nails, rust and a musty smell of iron implements, and dikes made by children in the high road, announce rain to be approaching.
  - 6. Mountains resembling heaps of collyrium, or their cloughs wrapt in vapour, and halos of the colour of cocks' eyes round the Moon, bring rain.

<sup>&</sup>lt;sup>1</sup> Cancer, Capricorn, or Pisces.

<sup>&</sup>lt;sup>2</sup> Comm. gives for examples: ग्रणी मुत्ता ग्रज्ञपालक्षित्रगादि। The dictionaries only mention ग्रज्ञप, Cassia Tora; but pa and palaka are synonymous, and therefore interchangeable terms.

7. Ants shifting their eggs<sup>1</sup> without mishap, snakes copulating and climbing upon the trees, and cows frisking, are signs of rain.

8. Rain will fall very soon, when the lizards on the tops of the trees keep their eyes fixed upon the firmament, and

cows are looking up to the Sun.

9. If cattle are unwilling to leave the house, shaking their ears and hoofs, and similarly dogs, one may state that rain is about to come down.

10. When dogs are standing on the thatches or look steadily up to the heavens, or when lightning at day-time arises from the north-east, the earth's surface will be levelled by exceedingly much rain.

11. When the Moon is hued like the eyes of a parrot or dove, or honey-coloured, and when a mock-sun appears in the

sky, then rain will ere long fall from heaven.

12. When there is thunder at night, blood-red and perpendicular lines of lightning at day-time, and a fresh easterly breeze, rain is at hand.

13. Fall of rain is near, if the shoots of creepers erect themselves aloft, the birds bathe in water and dust, and creep-

ing worms betake themselves to the sprigs of grass.

14. At dawn or twilight clouds showing the same colour as peacocks, parrots, blue jays or câtaka-birds, or having the lustre of roses and red lotuses, and resembling in shape waves, hills, crocodiles, tortoises, boars, fishes, and piled up with manifold breaks, yield water within short time.

15. Such clouds also as, being white at the ends like stucco or moonlight, lustrously black in the middle as collyrium or bees, with many breaks, sleek, trickling, divided in stairs, issue from the east and move to the westward, or after looming up from the west veer eastward, presently send forth plenty of rain upon earth.

16. Should there, at the Sun's rising or setting, be seen a

<sup>1</sup> Thus also in Rajataranginî, viii. 722, where we have to read:

उट्टीकिते गवां वृचमूधीरोहेण भोगिनाम्। पिपीलक्कुलस्थाण्डीपसङ्कान्यैव वर्षणम्॥ rainbow, a cloudy crossing bar, a mock-sun, a red line seeming like a fragmentary rainbow, and lightning, then abundant, imminent rain may be predicted.

[17. If the sky wears the tinge of francolines' feathers, and the crowds of birds warble forth merrily at sunrise and sunset, day and night, the clouds will pour out rain very soon.]

18. The so-called "unerring" sunbeams, stretched upward like the hands, as it were, of the Mountain of Sunset, and clouds sounding hollow as the ground, are important signs of (instant) rain.

19. If the Moon, during the rainy season, stands in the seventh mansion from Venus, and is looked at by a benign planet, or stands in the fifth, seventh, or ninth mansion from Saturn, there is a tendency to rain.

20. Not unfrequently rain ensues at the planets' heliacal rising or setting, their conjunction, and their entering in a new division,<sup>3</sup> or at the end of a half-month, of a half-year, and certainly at the Sun's staying in Ardrâ.

21. Rain falls also at a conjunction of Mercury and Venus, of Mercury and Jupiter, and of Jupiter and Venus. From a meeting of Saturn arises peril from wind and fire, unless they are looked at by, or in conjunction with, good planets.

22. When the planets tend to cling 4 to the Sun, forward or backward, 5 then they will make the earth, as it were, one sea.

### CHAPTER XXIX.

## Prognostics from Flowers and Plants.

1. By observing the prosperous condition of the fruits and blossoms of trees, one should ascertain the cheapness of substances, and the good success of the crops.

<sup>&</sup>lt;sup>1</sup> Cf. ch. xlvii. 20.

<sup>&</sup>lt;sup>2</sup> See ch. xxx. 11, and cf. ch. xlvii. 20.

<sup>3</sup> As mentioned in ch. ix. 10, sqq.

<sup>4</sup> i.e. are about to set heliacally.

<sup>&</sup>lt;sup>5</sup> According to their motion, being slow (near the apsis), or swift (near the conjunction).

2. From (the floweriness of) the Sal-tree (is to be known the happy growth of) Kalama-rice; from the red Açoka, red rice; from the Asclepias,1 yellowish rice; from the dark Açoka, hog's rice.

3. The Indian fig-tree (thriving), indicates (the growth of) barley; 2 by the ebony tree blossoming, the Shashtika-rice will grow; from the holy fig-tree one may know the success

of all crops.

4. From rose-apples are inferred sesamum and peas; from Sirisa-flowers is known the full development of panic seed; from Bassia, wheat; from Echites, the growth of barley.

5. From Dalbergia and jessamine one may predict cotton; from Terminalia, mustard seed; from jujube, Dolichos; from

Karanj, kidney-beans.

6. Linseed may be anticipated from ratan blossoming; Paspalum, from the flowers of Butea frondosa; conch-shell, pearl and silver from the Tilaka-tree; and hemp from Termi-

nalia Catappa.

7, 8. One may foretell (the cheapness of) elephants from Ricinus; of horses, from Vatica robusta; of cows, from Bignonia suaveolens; of goats and sheep from plantains; gold from the blossoms of Michelia champaka; plentifulness of coral, from the Pentapetes Phœnicea; diamond from the flourishing state of red Barberia; and beryl from Tabernæmontana.

9. One has to infer pearl from Negundo; saffron from Carthamus tinctorius.3 By the red lotus is indicated a king;

by the blue one, a minister.

10. Chief merchants are indicated by the flowers of Bauhinia (?); Brahmans by lotuses; court priests by esculent white water-lilies; generals by the odoriferous water-lily. Increase of gold is foreshown by the sunflower (Callotropis).

11. Mangos point to safety; Semecarpus to danger; wal-

<sup>1</sup> The Comm. explains चीरिका to be दुग्धिका.

<sup>2</sup> Otherwise the Comm. यवनः ग्रालिविग्रेषः।

<sup>3</sup> If we follow the reading of the Comm., i.e. karuka, we have to translate, "artisans are indicated by Carthamus."

nuts to healthiness; Mimosa catechu and Mimosa albida to famine; the fruits of Terminalia Arjuna to good rain.

12. The blossoms of Azadirachta and Mesua presage good times; wood apples, wind; Barringtonia, danger from drought; Wrightia, danger from diseases.

13. The blooming of Dûb and sacrificial grass bespeaks sugar-cane; that of the Bauhinia, fires; by the luxuriant growth of Syâmlatâ, courtesans will thrive.

14. Good rain is generally predicted for any tract of country where trees, shrubs and plants show smooth and unimpaired leaves; whereas, these being rough and impaired, little rain is predicted.

#### CHAPTER XXX.

#### The Signs at Dawn and Twilight.

1. The time during which the stars are indistinct, before sunrise and after sunset, is the time of dawn and twilight. The signs of it, which produce effects, are the following:

2. Wild deer, augural birds, wind, halos, mock suns or moons, cloudy bars crossing the solar orb, tree-shaped clouds, rainbows, Fata Morgana, peculiar solar beams, staffs in the air, dense dust, glossiness and colour.

3. A wild beast, repeatedly uttering loud and horrible shrieks, bespeaks the destruction of a village; being blasted <sup>3</sup> by the sun and screaming from the right side, <sup>4</sup> he makes the military forces to be slain.

<sup>1</sup> The expression in the original is, properly, "having half set," i.e. "half the orb still appearing above the horizon."

2 Comm. तथाच गर्गः

# त्रहोराचस्य या सन्धिः सा च सन्ध्या प्रकीर्तिता। दिनाडिका भवेत्सातु यावदा च्योतिदर्शनम्॥

The word jyoti, instead of jyotis, is worth being remarked. Cf. ভথাবৈশ in B. and R. Skr. Dict. The feminine gender of sandhi, too, has not been met with elsewhere, so far as I am aware.

³ i.e. facing the sun, सूर्याभिमुख.

<sup>4</sup> Utpala explains it differently, viz., "from the south."

4. If the animal does so from the left, there will be a battle. If he happens to be on the right side and unmolested,1 an encounter of armies will ensue. Should a great many animals or the wind stand in mixed quarters, during dawn or twilight, then there will be rain.

5. A twilight 2 during which wild beasts and birds, vexed, raise cries from the east, bodes the ruin of the land; one resounding with the screams of animals, blasted by the sun, from the southern region, points to the capture of the town.

6. Ill-omened is the twilight, if a strong wind, raising dust and clods, with great noise shakes dwellings, trees, and

gateways, and vehemently throws the birds down.

7. Auspicious is the twilight, if animals and birds, unafflicted, send forth soft notes, and if there is no wind, or only a gentle breeze by whose rubbing the foliage of the trees is being slightly moved.

8. Sleek staffs in the air, lightning, fish-like clouds, a mock-sun, a halo, a rainbow, straight lines resembling fragmentary rainbows and distinct sunbeams, at the time of twi-

light, bring speedy rain.

9. The Sun's rays being broken off, unequal, dissipated, unnatural, crooked, turned to the leftward, thin, short, crip-

pled, and dimmed, bring war and drought.

10. The Sun's beams being brilliant, clear, straight, long, turned to the right, in a cloudless sky, tend to the weal of mankind.

11. The bright, distinct, unbroken, straight sunbeams that extend from the horizon up to the midst or over the whole of the heavens, are the so-called "unerring" beams. produce rain.

12. Greyish,3 tawny, russet, variegated, madder-hued, greenish-yellow and spotted rays, stretching all over the

# ¹ Comm. शान्तदिक्खे मधुरखरे नार्कामिमुखेच।

<sup>2 &</sup>quot;Twilight" denotes here and in the sequel both dawn and evening twilight.

<sup>&</sup>lt;sup>3</sup> Comm. कल्याघाः पीतगौरक्रष्णवर्णाः।

heavens, are conducive to rain, but produce also, after a week, some danger.

13, 14. Copper-red sunbeams cause the death of a general; yellow and rosy ones, his ill-fortune; greenish-yellow ones, the ruin of cattle and crops; dark purple ones, the loss of kine; madder-coloured rays occasion consternation, owing to the sword and fires; tawny ones, a rain with wind; ashycoloured ones, drought; spotted and greyish rays¹ cause slight rain.

15. If at the time of twilight dust, tinged like the blossom of Pentapetes Phœnicea, or like collyrium powder, goes up to the Sun, mankind will be afflicted by hundreds of diseases. White dust presages men's prosperity and bliss.

16. A compound of solar rays, clouds and wind, in the shape of a staff, is called an (airy) "staff." If seen in the intermediate regions, it is baleful to monarchs; if in the cardinal points, it is so to Brahmans, Kshatriyas, etc.<sup>2</sup>

17. A staff appearing at the beginning, middle, or end of the day,<sup>3</sup> causes danger from the sword and grief. If white, it destroys the Brahmans; if red, the Kshatriyas, etc., and that in the direction to which it is turned.

18. A dark blue tree-like cloud, with milk-white top, in the midst of the canopy, and screening the Sun, as well as clouds with yellow streaks and big at the bottom, procures much rain.

19. If a tree-like cloud arises behind a sovereign on march, he will be killed; if it looks like a young tree, the prince royal or minister will die.

20. A dawn showing the hue of blue lotus, beryl, nelum-

¹ Comm. ग्रवलकलाषाः सितक्रष्णनीलपीतवामिश्रवर्णाः।

<sup>2</sup> The r. द्विजादीनाम् is preferable to द्विजातीनाम्।

³ The word प्राङ्मध्यसन्धिषु is a striking example of inaccuracy, as the author must have meant प्राङ्मध्यान्त or प्राङ्मध्यपञ्चासन्धिषु. This must be inferred from the plural सन्धिषु, which would have been सन्ध्यो:, if only the beginning and middle of the day were meant. Utpala also: उदयमध्याहासमयकालिष्.

bium filaments, free from wind, and brightened by the Sun's

rays, produces rain the same day.

21. Dawn in the rainy season being attended with illshaped clouds, Fata Morgana, mist, dust and smoke, puts a stop to the rain; in any other season, it occasions the raging of the sword.

22. The natural colour of twilight during the different seasons, to begin with the cold season, is red, yellow, blank, variegated, nelumbium-hued and crimson, each of which is favourable in the proper season. Any deviation from this

rule is portentous.

23. A cloud fragment in the shape of a man with a weapon, and tending to the Sun, points to danger from the foe. When a bright airy city (i.e. Fata Morgana) is approached by the Sun, a (beleaguered) town will be taken; when the same is crossed by the Sun, the town will be destroyed.

24. The Sun being concealed by white and far-stretching clouds on the right side 1 bestows rain; so, too, does the Day-god, being covered by clouds resembling tufts of Andro-

pogon grass, and issuing from a quarter not blasted.2

25. A white cloudy bar through the Sun's orb at the time of his rising causes disaster to the king; one of bloody appearance occasions the raging of armies; one shining like gold makes armies prosper.

26. Two colossal mock-suns, one on either side of the Sun, bring plentiful rain; but if mock-suns surround the Sun in

four directions, there will not be one drop of rain.

27. Clouds at dawn or evening twilight, in the form of banners, umbrellas, rocks, elephants, or horses, bode victory; blood-red ones, a battle.

28. Clouds suspended like heaps of smoke from straw fire, and smooth in appearance, make the armies of monarchs prosper.

29. Clouds at twilight hanging down, or tree-like, or

<sup>1</sup> From the south.

<sup>2</sup> About दीम and भानत, cf. ch. lxxxvi. 12, and Ind. Stud. x. p. 202.

rough 1 in appearance and rosy, are auspicious; such as resemble towns, bring good luck.

30. A twilight accompanied with the cries of vexed birds, foxes, and wild beasts, with airy staffs, dust, cloudy bars, and the like, or with daily recurring unnatural solar phenomena, foreshows the ruin of land, king, and welfare.

31. Dawn produces its results immediately; evening twilight the same night, or after three days; halos, dust and cloudy bars show their effects either instantly or a week after. The same with solar beams (of peculiar cast), rainbows, lightning, mock-suns, clouds, and wind. Birds do so the same day or that day week; wild beasts in a week.

32. Twilight sheds its gleam (and shows its effects) over one yojana; lightning illumines by its flickering six yojanas; the sound of thunder extends over five yojanas; no limit can be assigned to the falling of meteors.

33. The circle termed a mock-sun shines three *yojanas* far; a cloudy bar, five; a halo is visible five or six *yojanas*; the rainbow shows its lustre for ten *yojanas*.

## CHAPTER XXXI.

## The Glow at the Horizon.

1. The glow at the horizon, if yellow, presages peril to the king; if fire-red, the ruin of the country; if rubicund and observed with wind from the left, it occasions the loss of the crops.

2. One that makes its appearance with great brilliancy, and distinctly sets off shadow, as the Sun does, bodes great danger to the king; if bloody-red, it betokens the raging of the sword.

3, 4. By a glow in the eastern quarter, knights and sovereigns are to suffer; by one in the south-east, artisans and princes; by one in the south, Vaiçyas and persons of cruel

¹ Otherwise Utpala: खरा। ऋतीव यासावर्णता।

occupations; by one in the south-west, envoys and widows who have re-married; by one in the west, Cûdras and agriculturists; by one in the north-west, thieves and horses; by one in the north, Brahmans come to grief; so do heretics and merchants by one in the north-east.

5. A serene sky, bright stars, and a wind blowing from left to right, combined with a gold-hued glow at the horizon,

is for the weal of people and king.

# CHAPTER XXXII.

Signs of an Earthquake.

1. Some say that an earthquake is caused by some huge animal living in the midst of the waters; 1 others, however, that it arises when the elephants of the quarters, being tired of the earth's load, are taking breath.

2. A wind falling down upon earth with noise, as if struck by another wind, occasions it, say some; 3 others, however,

1 Comm. तथाच काश्यपः

वक्णस्वीपरि पृथी संशैलवनकानना। स्थिता जलजसत्वास संचीभाचालयन्ति ताम्॥

2 Comm. तथाच गर्गः

चलारः पृथिवीं नागा धारयन्ति चतुर्दिशम् । वर्धभानः सुवृद्धश्चातिवृद्धश्च पृथुश्रवाः ॥ वर्धमानी दिशं पूर्वी सुवृद्धो दिषणो दिशम् । पश्चिमामतिवृद्धस्तु सीम्याशान्तु पृथुश्रवाः । नियोगाद्रह्मणो ह्येते धारयन्ति वसुन्धराम् ॥ ते श्वसन्ति यदा श्रान्ताः स वायुः श्वसनो महान् । विगान्तर्हीं चाजयते भावाभावाय देहिनाम् ॥

The names of the elephants differ wholly from those we meet with in Amarakosha i. 1, 2, 5; Hemac. 170.

<sup>3</sup> e.g. Vasishtha.

maintain that it is ordained by unseen powers; other masters again narrate the following.

3. In the days of yore the mountains being winged shook Earth by flying up and down, on which in the assembly of the gods she spoke bashfully to the Creator:

4. "O Lord! the name of firmness, which thou hast bestowed upon me, is put to naught by the mountains stirring. I am not able to bear that toil."

5. As the Creator beheld her face slightly bent, and her eyes in tears, while with quivering lips she stammered forth her speech, he spoke:

6, 7. "Remove, Indra, the grief of Earth; throw thy thunderbolt, in order to lop off the mountains' wings." "It shall be done," quoth Indra. "Fear not," said he unto Earth. "Henceforth Vâyu, Agni, Indra and Varuṇa shall shake thee, in the first, second, third and fourth part of day and night, in order to make known the consequences of good and evil."<sup>3</sup>

<sup>1</sup> Utpala says: সার্থম্ভইন ঘর্মাঘর্মান্ত্রীন; erroneously, so far as concerns this passage. He cites himself the following stanzas of Vrddha-Garga's: নিয়াৰ নৃত্ত্যাৰ্থ:

प्रजाधर्भरता यच तच कमं सुभं भवेतः। जनानां श्रेयसे नित्यं विसृजन्ति सुरोत्तमाः॥ विपरीतस्थिता यच जनास्तवासुभं तथा। विसृजन्ति प्रजानान्तु दुःखशोकाभिवृद्धये॥

It is manifest that अदृष्ट corresponds to सुरोत्तमाः. Moreover, Utpala takes नारित to mean क्रत, which is purely fanciful.

तत्र चतुर्भ चतुर्भागेषु दिवानक्तमनिलानलेन्द्रवर्णणं कम्पन्नमं वि-न्दात्॥ एतत्सप्टतरं गर्भ आह

> क्वता चतुर्धाहोराचं दिधाहो न्थ दिधा निशम्। देवताश्रययोगाच चतुर्धा भगणं तथा ॥ पूर्वे दिनाधे वायत्र आपेयो न्धेतु पश्चिमे। ऐन्द्रः पूर्वेच राज्यधे पश्चिमाधेच वादणः॥

<sup>&</sup>lt;sup>2</sup> e.g. Parâçara.

<sup>3</sup> Comm. पराश्र ऋह

8. The asterisms Uttara-Phalgunî, Hasta, Citrâ, Svâti, Punarvasu, Mṛgaçiras and Açvinî constitute the division ruled by Vayu. The foretokens belonging to it show themselves a week before the event, and are the following:

9. A wind that raises the dust of the earth into a most hazy sky, and bruises trees in his course, while the Sun shines

with faint rays.

10. By an earthquake of Vâyu's, it is said that crops, rain, woods and weeds get damaged; merchants are to suffer by intumescence, heavy sighing, madness, fever, and cough.

11. Handsome persons, men of arms, physicians, women, poets, singers, dealers, artisans, the Surashtrians, Kurus,

Magadhas, Daçârnas, and Matsyas have to suffer too.

12. The asterisms Pushya, Kṛttikâ, Viçâkhâ, Bharanî, Maghâ, Pûrva-Bhadrapadâ and Pûrva-Phalgunî make up Agni's division, to which pertain the following symptoms:

13. The firmament, covered with falling stars and meteors, stands in a blaze, as it were, by the glow of the quarters;

fire, seconded by wind, stirs abroad for a week.

14. By an earthquake ruled by Agni, the rain-clouds vanish, the water-reservoirs become empty, the potentates quarrel, herpes, scab, fever, erisypelatous eruptions and jaundice 1 prevail.

15. Ardent and fierce characters, the Açmakas, Angas, Bahlîkas, Tanganas, Kalingas, Vangas, Dravidas (or Dramidas), and various tribes of Çabara-savages are to suffer.

16. The mansions Abhijit, Çravana, Dhanishthâ, Rohinî,

# चलार एवमेते खुरहोराचिवक्खजाः। निमित्तभूता जोकामामुद्कानिर्घातभूचलाः॥

# एवं चतस्रो वेला इति सिडम्॥

For what purpose a natural day is divided into four parts, and the whole of the lunar mansions into as many portions, will appear from stanza 27.

1 Or chlorosis (?). Comm.: पाण्डुरोग उद्रामय:. Probably the same disease as हृद्योत; Atharva-Veda i. 22. In the text पाएड is, of course, a typographical error for utus.

Jyeshthâ, Uttara-Ashâdhâ and Anurâdhâ form Indra's division; the tokens of it are:

17. Clouds that, bulky as mountains in motion, similar in colour to buffalo's horn, swarms of bees or snakes, emit a

deep sound and lightning, and pour out rain.

18. An earthquake during Indra's division destroys such as are renowned by learning, family and lineage, sovereigns and headmen of corporations. It produces dysentery, influenza, mouth disease, and violent vomiting.

19. It afflicts the Kâçis, Yugandharas, Pauravas, Kirâtas, Kîras, Abhisâras, Halas, Madras, Arbuda, Suvâstu, and

Mâlava, but yields desirable rain.

20. Revatî, Pûrva-Ashâḍhâ, Ârdrâ, Açleshâ, Mûla, Uttara-Bhadrapadâ and Çatabhishaj constitute Varuṇa's division. Its signs are:

21. Thick, soft muttering clouds, showing the dark lustre of blue lotus, bees or collyrium mixture, illumined by light-

ning, and diffusing prickly drops.1

22. An earthquake at Varuna's division hurts the denizens of the seas and rivers, bestows very much rain, and strikes the Gonardas, Cedis, Kukuras, Kirâtas and Videhas; at the same time, however, quarrels cease.

23. An earthquake produces its results six months afterwards; a typhoon after two. According to some authorities, the divisions before mentioned are applicable also to other

portents.2

[24-26. Meteors, Fata Morgana, dust, typhoons, earthquakes, glow at the horizon, storm, solar and lunar eclipses,

1 Utapalar. धाराङ्कर, but clouds can scarcely be compared to seeds, or the fine drops to shoots.

<sup>2</sup> Comm. तथाच गर्गः

निर्घातोत्कामहीकम्पाः स्तिग्धगभीर् निःखनाः।
मेघस्तिनप्रब्दाञ्च सूर्येन्द्वीर्यहणे तथा॥
परिवेषेन्द्रचापञ्च गन्धर्वनगरं तथा।
मण्डवेरेव बोडवाः सुभासुभफ्रवप्रदाः॥

The three stanzas in brackets are taken from our author's Samâsa-Sanhitâ.

unnatural phenomena of lunar mansions and other stars, rain by a cloudless sky, unnatural rain, rain attended with wind, smoke and sparks of flame without fire, a wild beast entering a village, rainbows appearing at night, unnatural signs at dawn and twilight, fragmentary halos, rivers flowing backward, notes of musical instruments in the air; of these, and other phenomena contrary to the common course of nature, the effects must be made known in reference to the same divisions.]

27. An earthquake ruled by Indra annuls one of Vâyu's department, and Vâyu paralyzes one of Indra's. In the same way do the earthquakes arising in the period and department of Varuṇa and Agni neutralize each other.<sup>1</sup>

28. By an earthquake occurring during the division of Agni and the period of Vâyu, or vice versa, renowned monarchs will die or suffer calamity, and the subjects, too, will be vexed

by dread of famine, by pestilence, and drought.

29. By an earthquake happening during the division of Varuna and the period of Indra, or vice versa, there will be abundance of food, happiness, rain, and contentment among the people; the cows will yield plentiful milk, and the kings will put an end to hostilities.

30. As to those omens for which no term is fixed,2 Vâyu produces his effects in four half-months, Agni in three, Indra

in a week, and Varuna the same day.

31. Vâyu shakes the earth to an extent of 200, Agni of 110, Varuna of 180, and Indra of 160 yojanas.3

1 i.e. the influence of an earthquake that is to occur when one of the asterisms in the division or department of Indra happens to be the asterism of the day, is paralyzed in case the period of its occurrence coincides with the peculiar period of the day allotted to Vâyu, and vice versa.

² Comm. देहस्यन्दनिपटकप्रायेषु कालः समयो नोक्तो न कथितस्ति यद्यानिले वायये मण्डले भवन्ति। तदा चतुर्भः पचैर्मासद्दयेन फलन्ति।

वायवे मण्डले नित्यं योजनानां ग्रतद्रयम्। द्शाधिकमथायेय ऐन्द्रे षष्यधिकं ग्रतम्। ग्रतञ्जाभीतिसंयुक्तं वार्षे मण्डले चलेत्। 32. If there be another earthquake on the third, fourth, or seventh day, or a fortnight, month, or three half-months after, it will be deadly to eminent potentates.

#### CHAPTER XXXIII.

# Foretokens from Meteors.

1. Meteors are the dropping fruits of merit enjoyed in heaven, in visible form. They are divided into five kinds: ignescent balls, meteors, thunderbolts, lightning, and (shooting) stars.<sup>1</sup>

2. A meteor (in restricted sense) produces its effects in a fortnight; likewise an ignescent ball; a thunderbolt in three half-months; lightning in six days; a (shooting) star the same.

3. Three out of the five phenomena of meteors have full effects, viz., lightning, meteors, and thunderbolts; a shooting star is said to produce the fourth part of the full effect, and an ignescent ball the half.

1 Comm. गर्गादिभिः पुनरन्यथा कथितम् यथा लोकपाला लोकानां सुभानुभफलसूचनायास्त्राणि ज्वलितान्युत्सृजन्ति तान्येवोल्काः। तथाच गर्गः

स्वास्त्राणि सन्यजन्त्येते मुंभागुभनिवेदिनः । बोकपाना महात्मानी बोकानां ज्वनितानि तु॥ ग्राचार्येण खल्पसंहितायां तदेवोक्तम्

> त्रस्ताणि बोकपाबा बोकाभावाय सन्यजन्युब्काः। केषाञ्चित्पुष्यक्रतां तचीका विच्युतिः खगीत्॥ इति॥

The explanation of these mythological phrases is not difficult. Ullâ, in the most common acceptation of the term, is a "shooting" or "falling star." Now, the notions of star, ray and darted weapons are generally expressed by the same word. One instance may suffice, viz., the etymological identity of Sanskrit war and Greek ǎotrov. Hence an ulkâ may be called an astram. The notion of "shooting" or "shot" finds its expression in उत्पन्न; that of "falling," in विश्वति and पत.

4. A thunderbolt comes, crackling, down upon men, elephants, horses, wild beasts, rocks, houses, trees, or cattle, at the same time wheeling and rending the surface of the earth.

5. Lightning frightens on a sudden animals by its crackling, moves flaming in wide zigzags, and falls down upon

living creatures and faggot piles.

6. An ignescent ball is small, with a short tail, and continues visible over a space of forty cubits or more. It looks like a burning coal, and measures two cubits.

7. A (shooting) star is (apparently) a cubit in extension, and white, red, or of the colour of lotus filaments. It moves in the heavens horizontally, downwards or upwards, as if

being drawn.

8. A meteor (in restricted sense) is large at the top, and increases in size in falling, dragging all along behind itself a very thin tail. Its length (the tail included) is three cubits and a half. There are many sorts of it.

9. Such as resemble spectres, weapons, asses, camels, crocodiles, monkeys, boars, ploughs, wild beasts, great lizards, snakes, and smoke, have evil consequences, as well as such

as have two crests.

10. Such as appear like banners, fishes, elephants, mountains, lotuses, the Moon, horses, glowed silver, or are shaped like the figures called Crîvatsa,<sup>2</sup> thunderbolt, conch and cross, bring times of plenty.<sup>3</sup>

What here is called "tail" (puccha), is not to be confounded with the tail, or rather crest (cikha, cala) of a comet. The former is simply

a result of optical illusion.

2 Utpala r. श्रीवृत्त, about which he remarks that it is well known, (prasiddha). From other passages it appears that he takes श्रीवृत्त to be synonymous with विल्, Ægle Marmelos. Cf. Weber, Fragment der Bhagavatî, pp. 306, 312. The compound यथास्थितन्तर्वापितश्रीवृत्तंत, l.c., is an error for वांक, I presume; whereas Weber proposes to read वांकित. The compound is a Bahuvrîhi, and may be rendered, "whose Crîvrksha-figure possesses the proper marks."

³ 'Comm. तथाच कास्थप:

नरेभतुरगयापमवृचेषुच पतेत्सदा। ज्वलन्ती चक्रवदृश्या लग्ननी रावसंयुता॥ 11. Meteors, dropping in great numbers from the midst of the canopy, are pernicious to king and land. By whirling high in the sky, a meteor presages commotion among mankind.

12. One coming in contact with the Sun or Moon, or issuing from either at the time of an earthquake, causes a hostile invasion, the king's death, famine, drought, and unsafety.

13. A meteor destroys monarchs staying in town or those on march, according to its passing the Sun or Moon to the right. One dropping from the Sun in front of the traveller brings good.

14. A meteor, being white, ruins the Brahmans; being red, the Kshatriyas; being yellow, the Vaiçyas; and, being black, the Çûdras. The members of the four castes are also hurt, severally, by meteors falling upon the head, shoulder, side, and behind.

15. A meteor of coarse appearance brings woe to Brahmans, by falling in a northerly direction; in an easterly direction, to Kshatriyas, and so forth. If it appears sleek, not crooked, entire, and is moving low, it tends to the prosperity of the same.

विद्युत् चासकरी भीमा श्रन्दायनी तटातटा।
बृहच्छीर्षातिमूच्याङ्गी जीवेषुच पतेत्सदा॥
धनूषि दश्या दृश्या सूच्या धिष्ण्या प्रकीर्तिता।
ज्विताङ्गारसदृशी दौ हच्वौ सा प्रमाणतः॥
पद्मताम्राकृतिचैव हस्तमाचायतागता।
तिर्यगूर्धमधो याति सोह्यमानेव तारका॥
उन्का मूर्धनि विस्वीर्णा पतन्ती वर्धते तु सा।
तनुपुच्छा नृमाचा तु बज्जभेदसमावृता॥
त्रायुधप्रेतसदृशी जम्बुकोष्ट्रखराकृतिः।
धूमकृपा तु पापाख्या विस्वीर्णा या तु मध्यमा॥
ध्वजपद्मेभहंसाभा पर्वताश्वसमप्रमा।
श्रीवृषशङ्खसदृशा याचोन्का सा श्विवपदा॥

It is not necessary to point out how closely our author has imitated this passage.

16. One that is grey, rosy, blue, crimson, fire-red, dusky, or ashy, and rough, visible at dawn or day-time, broken and moving in a crooked way, bodes danger from hostile invasion.

17. In hurting asterisms or planets, a meteor is stated to be disastrous to whatever belongs to their department.\(^1\) By dashing against the Sun or Moon at the time of rising or setting, it is deadly for monarchs staying in town or on march.

18. If Pûrva-Phalgunî, Punarvasu, Dhanishthâ, and Mûla are scathed by a meteor, damsels are to suffer. Brahmans and knights come to grief if Pushya, Svâti, and Çravana are

attainted.

19. The (so-called) constant and kind asterisms being hurt, sovereigns are afflicted; the harsh and cruel mansions being struck, thieves are to suffer; whereas artisans will suffer, should the swift and neutral asterisms2 be in the same predicament.

20. By falling upon idols, meteors cause danger to king and land; by coming down upon an image of Indra, they occasion distress to sovereigns; by falling upon dwellings,

they bring affliction to the owners.

21. By hurting the planet of a particular region,<sup>3</sup> a meteor causes suffering to the people in that quarter. If it comes down on a threshing-floor, agriculturists are to suffer. it falls on a holy tree, the beings worshipped there are distressed.

1 As enumerated in ch. xv. and xvi.

<sup>2</sup> Among the asterisms are called constant (ध्रुव): Rohiņî, Uttara-Bhadrapadâ, Uttara-Ashâdhâ, and Uttara-Phalgunî; kind (सौस्य, मृदु): Mṛgaçiras, Citrâ, Anurâdhâ, and Revatî; harsh (उग्र): Bharaṇî, Maghâ, Pûrva-Bhadrapadâ, Pûrva-Ashâdhâ, and Pûrva-Phalgunî; cruel (दान्स, तीच्या, क्रूर): Ârdrâ, Açleshâ, Jyeshthâ, and Mûla; swift (चिप्र, लघु): Açvinî, Tishya, Hasta, and Abhijit; neutral (साधारण, मृदुतीरण): Krttikâ and Viçâkhâ. Cf. ch. xeviii. 6-11; also Weber, Jyotisha, p. 95; and Naxatra, ii. 385.

3 The planets of the eight regions, east, south-east, etc., are the Sun, Venus, Mars, Râhu, Saturn, the Moon, Mercury, and Jupiter.

22. A meteor, if coming down upon a city gate, bespeaks the ruin of the city; if on a bolt, the destruction of the people; if on a shrine of Brahma, it crushes the Brahmans; if on a cow-house, the cow-keepers.

23. If at the moment of a meteor falling are heard such sounds as roaring, claps, instrumental music, song and clamours, they augur danger to the land and its ruler.

24. A staff-like meteor, whose train continues for a long time visible in the sky, is dangerous for the king. So, too, one that appears in the air as though it were drawn by a thread, or one that resembles the banner of Indra.<sup>1</sup>

25. By going backward, a meteor ruins head merchants; by going in a horizontal direction, king's wives; by tending downward, kings; by moving upward, Brahmans.

26-28. A meteor shaped like a peacock's tail brings destruction to mankind; one creeping like a snake, is disastrous to women; a circular one, is fatal to the town; one in the form of an umbrella, to the court priest; one resembling a tuft of bamboo, is noxious to the kingdom. Mischievous also is one that bears a likeness to beasts of prey, or boars, and shows a crown of sparks, or is shattered to pieces, and attended with noise.

29. One that looks like a rainbow, destroys the empire; one that dissolves itself in the heavens, undoes the clouds; one moving against the wind, in a crooked way or backwards, is not auspicious.

30. Danger threatens the king from the quarter from which a meteor is approaching the town or host, but if the monarch marches off to the quarter where a meteor comes down blazing, he will ere long conquer his foes.

# CHAPTER XXXIV.

# Signs of Halos.

1. Halos consist of solar or lunar beams that, reflected by the wind, take a circular shape and show themselves in a slightly clouded sky in various colours and forms.

<sup>1</sup> About the banner of Indra, see ch. xliii.

2. They are crimson, deep blue, pale yellow, dove-coloured, darkish, speckled grey, greenish yellow or white, according to their being produced by Indra, Yama, Varuna, Nirrti, Vâyu, Çiva, Brahma, or Agni.

3. Kubera is the author of one having the hue of a peacock's neck; others produce halos of mixed colours. Vâyu's work also is a halo that ever and anon is fading away,

having trifling results.1

4. A halo shining like the blue jay, peacock, silver, oil, milk, or water, being glossy and entirely round, bestows welfare and plenty, if appearing in its proper season.<sup>2</sup>

5. Mischievous is one that extends its course through the whole firmament, shining, variegated or blood-red, rough,

broken, having the shape of a cart, bow, or triangle.

6. On the appearance of a halo tinged like the peacock's neck, follows much rain; of a varicoloured one, the death of the king; of a dark purple one, unsafety; of one coloured as the rainbow or the red Açoka, war.

7. When there is a glossy, thick halo, which shows the natural colour of the season, and is overcast with stratified clouds, it brings rain on the same day. So, too, does a yellow

one, when the Sun is shining fiercely.

8. A huge, hazy halo seen at dawn, noon, or twilight,

# ¹ Comm. तथाच काम्यपः

सितपीतेन्द्रनी नाभर क्तकापीतवस्रवः। श्वजविद्वर्णाय विज्ञेयासे सुभावहाः॥ ऐन्द्रयाम्याप्यनैर्ज्ञदेखवार्णाः सौम्यविद्वजाः। दृश्चादृश्चेन भावेन वायव्यः सौ प्यनिष्टदः॥

 $^2$  Much more perspicuous is the following passage from Kaçyapa:

शिशिरे चाषवर्णास वसन्ते शिखिसित्तमः। ग्रीको रजतसङ्काशः प्रावृट् तैलसमप्रभः॥ गोचीरसदृशः श्रस्तः परिवेषः श्ररत् स्नृतः। हेमने जलसङ्काशः स्वकाले सुभदः स्नृतः॥

Curious are प्रावृद् and प्रत्, instead of the locative, instrumental, or even accusative case.

while blasted birds and wild deer emit their cries, causes unsafety, and, if hurt by lightning, meteors and the like, it slays the king by the sword.

9. Whenever the Sun or Moon daily, during day and night, looks red, death awaits the sovereign; likewise, when both are repeatedly surrounded by a halo at the time of rising,

setting, or noon.1

10. A halo consisting of two circles is threatening to the commander of the army, though the raging of arms caused by it is not so very violent. Three circles foreshow the raging of the sword; four of them, peril for the prince royal; five of them, the siege of the town.

11. A planet, the moon and a star being inclosed (within a halo, at the same time), there will be rain in three days, or war in a month.<sup>2</sup> A halo surrounding the lord of the horoscope, the lord of nativity, or the birth-star<sup>3</sup> of the king, is

an evil omen for him.

¹ Comm. तथाच गर्गः

दिवा सूर्ये परिवेषो राचौ चन्हे यदा भवेत्।
एकस्मिंसिदहोराचे तदा नग्नित पार्थिवः॥
एतेन विधिना नित्यं सप्ताहं परिवेष्टने।
सर्वभूतविनाशः खात् तस्मिन्नत्पातदर्शने॥

² Utpala: एतदुक्तं भवति । चन्द्रपरिवेषमध्यगते ग्रहनचे यदा भवतस्रा त्र्यहेण दिनचयेण वृष्टिर्भवति । तथाच गर्गः

चीणि यचावरुधेरज्ञचनं चन्द्रमा ग्रहः। ऋहिण वर्षतीन्द्रस मासाद्वा जायते भयम ॥

³ The lord of the horoscope is the planet presiding over the horoscope; the signs Aries, Taurus, etc., are lorded over by Mars, Venus, Mercury, the Moon, the Sun, Mercury, Venus, Mars, Jupiter, Saturn, Saturn and Jupiter. See Brh. Jâtaka, i. 6; Laghu-Jâtaka, i. 8 (Ind. Studien, ii. p. 278). The lord of nativity is the sign the Moon is standing in at the time of one's birth. About the birth-star, see ch. iv. 28, footnote. Utpala: होराधियो जससम्। जसाधियो राष्ट्रधिय:, and in his comment on Yogayâtrâ, iv. 43: यदराष्ट्री (i.e. lunar mansion, here) स्थित चन्द्रमसि जातसाजनसर्चम.

12. Saturn, if shut up within the halo, ruins the lesser grain sorts, occasions rain seconded by wind, and destroys

trees, plants, etc., along with agriculturists.

13. If Mars happens to stand within the halo, young princes, military commanders and soldiers are defeated, whereas fire and sword are threatening. Should Jupiter be encircled, then court priests, ministers and kings are to suffer.

14. A prosperous condition of ministers, trees and writers, as well as a good rain, are the effects of Mercury being encircled. Distress comes to chiefs on march and sovereigns,

and dearth ensues, should Venus be inclosed.

15. Danger owing to famine, fire, mortality, the ruler and the sword, arises from a comet standing within the circle. If Râhu is shut in, there will be danger for the king, danger for unborn children, and sickness.

16. If two planets stand within a solar or lunar halo, one may with certainty expect battles, and if three planets are in the same predicament, danger from famine and drought is

announced.

17. The sovereign, along with his ministers and court priest, falls a prey to death, if four planets are invested. Know that the world cometh to an end, as it were, if five or more planets stand within the circle.

18. The appearance of a halo, apart from a planet or any asterism (being inclosed), may cause the king's death, unless

a comet appear at the same time.2

<sup>1</sup> Comm. चुद्रधान्यानि प्रयङ्गादीनि।

<sup>2</sup> In the latter case the effects of the comet only should be considered. Comm. तथाच काश्चपः

परिवेषाश्चन्तर्गौ द्दौ यहौ यायिनागरौ।
युद्ध भवित चिप्रं घोर रूपं सुदार्गम् ॥
युनावृष्टिचुद्भयनु परिवेषगतैस्त्रिभिः।
चतुभिः परिविष्टेस्तु राज्ञांस्तु मरणं भवेत्॥
मण्डलान्तरिताः पञ्च जगतः सङ्घयावहाः।
पृथक् ताराग्रहस्थैव नचनाणामथापिवा॥
परिवेषो यदा दृष्यस्तदा नरपतेर्वधः।
यदि केतूद्यो न स्थादन्यया तत्फलं वदेत्॥

19, 20. A halo being seen on the first, second, etc., of the month, has baneful results for Brahmans, Kshatriyas, Vaiçyas, Çûdras, in succession. On the fifth, it is fatal to the guilds; on the sixth, to the town; on the seventh, to the treasury; on the eighth, to the prince royal; on the three days following, it is noxious to the ruler; on the twelfth, it occasions the siege of the town; on the thirteenth, mutiny among the soldiery.

21. A halo, showing itself on the fourteenth, makes the queen suffer; on the fifteenth, it afflicts the king himself.

22. A straight line within a halo is to be considered as concerning kings staying in town; one without the circle, as pertaining to kings on march; one through the midst of the halo, as belonging to allies coming to the rescue.

23. Those kings whose special line looks crimson, dingy and coarse, get worsted, but those whose own line is white, bright and sleek, will conquer.

# 10

# CHAPTER XXXV.

# Signs of Rainbows.

1. The rainbow is formed by varicoloured solar rays that, pressed by the wind, appear in the shape of a bow in a cloudy sky.

2. Some Masters¹ say that the rainbow arises out of the exhalations of the serpents of Ananta's family.—A rainbow, if seen by kings on march in front, brings defeat.

3. A thick, varicoloured rainbow, unbroken, reaching to the ground, brilliant, sleek, double, observed behind (the person marching), is auspicious, and bestows rain.

4. One that arises in any intermediate region is pernicious to such classes as preside over that particular quarter;<sup>2</sup> one

1 Amongst others, Kâçyapa.

<sup>2</sup> The classes presiding over the eight quarters are enumerated in ch. lxxxvi. 34, q.v.

being seen in a cloudless sky produces pestilence. Pink, yellow, and dark blue rainbows engender evils from war, fire, famine.

5. A rainbow, appearing in water, produces drought; on the earth, the loss of the crops; on a tree, sickness; on an ant-hill, danger from the sword. If seen at night, it indicates the death of a minister.

6. A rainbow, if shining in the eastern quarter, out of the rainy season, brings rain, but within the season it prevents rain. If seen in the west, a rainbow announces rain at any time.

7. A nocturnal rainbow in the east brings distress to the king; such a one being observed in the south, west, or north, will crush a chief commander, a grandee, or minister

(severally).

8. A night rainbow of white colour brings woe to Brahmans; one of red colour to Kshatriyas, and so forth. It will, besides, ere long, destroy the principal monarch in the quarter where it happens to be observed.

(To be continued.)

ART. XIV.—On the Origin of the Buddhist Arthakathás.

By the Mudliar L. Comrilla Vijasinha, Government Interpreter to the Ratnapura Court, Ceylon. With an Introduction by R. C. Childers, late of the Ceylon Civil Service.

About eighteen months ago I was engaged in preparing an edition of Brahmajála Sutta, and of Buddhaghosa's commentary upon it which forms the first section of the Sumangala Vilásiní. Buddhaghosa's commentary upon Brahmajála Sutta is one of the most important of his writings, since it contains a detailed account of the First General Council, held immediately after Buddha's death for the purpose of settling the text of the Buddhist Scriptures. Intending to publish this work in the same volume with the Brahmajála which it comments upon, I began, and made considerable progress with, a translation of it. At the very outset I met with a difficulty, in the shape of an historical statement in Buddhaghosa's introductory verses which seemed in the highest degree improbable and untrustworthy. The first ten stanzas of the introduction run as follows:—

Karuṇásítalahadayam paññápajjotavihatamohatamam Sanarámaralokagarum vande sugatam gativimuttam. Buddho 'pi buddhabhávam bhávetvá c'eva sacchikatvá ca Yam upagato gatamalam vande tam anuttaram dhammam. Sugatassa orasánam puttánam márasenamathanánam Atthannam pi samúham sirasá vande ariyasangham. Iti me pasannamatino ratanattayavandanámayam puññam Yam suvihatantaráyo hutvá tass' ánubhávena, Dighassa dighasuttankitassa nipunasso ágamavarassa Buddhánubuddhasamvannitassa saddhávahagunassa Atthappakásanattham aṭṭhakathá ádito vasisatehi Pañcahi yá saṅgítá anusaṅgítá ca pacehá pɨ, Sihaladipam pana ábhatá 'tha vasiná mahámahindena, Thapitá Síhalabhásáya dipavásínam attháya,

Apanetvá tato 'ham Sihálabhásám manoramam bhásam Tantinayánucchavikam áropento, vigatadosam Samayam avilomento theránam theravamsappadipánam Sunipunavinicchayánam mahávihárádhívásinam, Hitvá punappunágatam attham, attham pakásayissámi Sujanassa ca tutthattham ciratthitattham ca dhammassa.

"I make obeisance to Him whose heart is tempered with mercy, in whom the darkness of error is dispelled by the lamp of wisdom, the teacher of the world with its men and angels, the welcome Being who is released from the bonds of existence.1 I revere the spotless and perfect Truth, by contemplating which, beholding it face to face, the Enlightened attained to perfect knowledge. I bow my head before the holy Church, that congregation of eight orders of men, true sons of Buddha, who have trampled on the hosts of sin. While thus with a heart full of faith I render honour to the Three Jewels, if there be any merit in the deed, by the virtue thereof may all dangers be averted from my path. The commentary intended to explain the meaning of the noble Long Collection, that scripture distinguished for its long discourses, subtle of meaning, praised by Buddha and his apostles, possessed of the qualities that sustain faith,—the commentary, I say, upon this Scripture was at the first Council rehearsed by five hundred holy elders, and in later times rehearsed again and yet again.2 And it was carried by the saintly Mahendra to the island of Ceylon, and for the sake of the dwellers in that isle translated by him into the Simhalese language. And now rejecting the Simhalese tongue, adopting the graceful language that accords so well with the order of Scripture, not contradicting the faultless conclusions of the elders of the priesthood who dwell at the Great Monastery,3 who are bright lights in the apostolic succession, men of skilful and subtle judgment,-for the edification of righteous men, and to the end that religion may

<sup>&</sup>lt;sup>1</sup> Released from the five Gatis or states of existence, i.e., existence as a deva, as a man, as a preta, as an animal, or as one suffering in hell.

<sup>2</sup> Viz., at the 2nd and 3rd Councils.

<sup>3</sup> In Ceylon.

long endure, I proceed to expound the meaning of my text, omitting all unnecessary repetitions."

We find here a distinct statement that a commentary on that portion of the Buddhist Canon which contains the Brahmajála was rehearsed, and its text settled, at the First Council; so that, unless some explanation of the passage be found, we must suppose that Buddhaghosa, the Augustine of Buddhist divines, believed that a commentary on Buddha's sermons actually existed during Buddha's lifetime, and that its text was settled immediately after his death. After vainly endeavouring to solve the problem, I wrote to my friend Mr. J. F. Dickson, of the Ceylon Civil Service, and asked him whether he could obtain for me from any of his native friends a satisfactory, or at any rate a probable, explanation of the difficulty. After a long delay I received from Mr. Dickson, on the 15th of April, a paper on this subject by a Simhalese native gentleman which seemed to me so able and scholar-like, that, although it was only intended for my perusal, I lost no time in obtaining permission to publish it in this Journal. singular interest attaches to this essay from the circumstance that it is the work of a liberal Buddhist. I print it unaltered, only transliterating the Páli citations.

R. C. CHILDERS.

# On the Sumangala Vilásini, and its allusions to an ancient Atthakathá.

It must be admitted that the point raised by Mr. Childers is one of grave importance as affecting the credibility of Buddhaghosa and the authenticity of all the commentaries on the Tipitaka. From a missionary point of view, the astounding statement that a commentary on Buddha's discourses existed during his lifetime, and was rehearsed along with those discourses at the First Great Council, appears so improbable and unnatural as at once to justify one in discrediting the testimony; and I doubt not that missionary orientalists will hail the discovery as a valuable addition

<sup>&</sup>lt;sup>1</sup> Immediately after Buddha's death.—R. C. C.

to their stock of arguments against the genuineness and authenticity of the Buddhist Scriptures. Indeed I found it difficult at first to obtain the opinions of some of my learned friends of the Buddhist priesthood on this point, as they seemed to regard it as another thunderbolt intended to be levelled against their religion by some enthusiastic missionary; and it was only after explaining to them the object of the inquiry, and the literary character of the gentleman who started the apparent difficulty, that I could induce them to look the question fairly in the face.

I am glad to say that most of my clerical Buddhist friends with whom I have consulted on this subject agree with me on the necessity of giving a wider and more extended signification than is generally allowed to the word Atthakathá as

applied by Buddhaghosa in the passage cited.

The word, as is well known, is compounded of two terms, attha, "meaning," and kathá, "a statement, explanation, or narrative," the dental t being changed to the cerebral by a latitude in the rules of permutation.1 The literal meaning of the compound term would thus amount to simply "an ex-Taking this wider sense of the planation of meaning." word as a basis for the solution of the problem, I think the statement of Buddhaghosa in his preface to the commentary on the Dígha Nikáya is not so hopelessly irreconcilable with probable and presumable facts as would at first sight appear. On a careful perusal of the two accounts given by Buddhaghosa of the proceedings of the three famous Councils in the Sumangala Vilásiní and the Samanta Pásádiká, this view will, I think, be found to be very reasonable. It must be admitted that no actual commentary, in the sense that the westerns attach to that term, and like that which has been handed down to us by Buddhaghosa, existed either in the lifetime of Buddha or immediately after his death. reasons adduced by Mr. Childers, apart from others that can easily be added, against such a supposition, are overwhelmingly convincing. But if we suppose that by the word

<sup>1</sup> Attho kathiyati etdyáti atthakathá, thakdrassa thakdram katvá dukkhassa píjanattho ti ádisu viya.—Tíká of Samanta Pásádiká.

Atthakathá in his preface Buddhaghosa only meant to convey the idea that at the various Councils held for the purpose of collocating the discourses and sayings of Buddha, the meanings to be attached to different terms—chiefly those that appear to have been borrowed from the Hindu system of ascetic philosophy<sup>1</sup>—were discussed and properly defined, then the difficulty of conceiving the contemporaneous existence of the commentaries and the Pitakas would be entirely removed.

This view of the subject will appear still further borne out if we briefly glance over the history of the First Convocation, as narrated by Buddhaghosa himself. The first proposal to hold an assembly of priests for the purpose of collocating Buddha's discourses was made by Mahá Kassapa, the chief of the seven hundred thousand priests who assembled at Kusinára to celebrate the obsequies of the departed saint. Seven days had hardly elapsed after that mournful occurrence, when signs of discontent at monastic restraint manifested themselves, and a disaffected disciple of Buddha named Subhadda openly proclaimed that now their master was no more the ties of discipline should be relaxed, if not broken. The words of consolation offered by this old monk to his brethren in distress are certainly remarkable, as it would be difficult to say whether they betoken more the callousness of his feelings or the depravity of his heart: "Brethren, enough of this sorrow, weep not, lament not. We are well rid of that Arch-priest, having been in constant dread of his declarations, This befits you, this befits you not. Now, therefore, what we desire we shall do; what we do not desire that shall we not do."2 To a sagacious mind like that of Mahá Kassapa it was not difficult to perceive what language like this foreshadowed, and he instantly formed the resolve to congregate the priesthood, and to collect and arrange the laws and doctrines proclaimed by his Master. Hardly two months had elapsed3 before this active mind brought about

<sup>1</sup> See note A.

<sup>&</sup>lt;sup>2</sup> Alam ávuso má socittha má paridevittha, upaddutá ca homa "idam vo kappati idam vo na kappatíti," idání pana mayam yam icchissáma tam karissáma yam na icchissáma tam na karissáma.—Samanta Pásádiká.

<sup>3</sup> See note B.

what it had contemplated, and the result was the Council of the Five Hundred, convoked at Rájagaha, under the auspices of King Ajátasattu, for the purpose of collecting and arrang-

ing the doctrines and discourses of Buddha.

The proceedings of this Council appear to have been conducted in a very orderly and systematic manner, which is the more surprising when we consider that monastic autocracy was about to give place to a form of church government prescribed by the great Founder himself, but which was now to be established and tested for the first time. Mahá Kassapa, whom Buddha indirectly indicated as his equal in point of superhuman mental acquirements, assumed the office of Moderator, and by the unanimous consent of the synod Upáli was elected as the best qualified of their order to repeat the Vinaya, and Ananda the Dhamma; the Council having previously decided that the Vinaya was the most material for the permanence of Buddhism. Now it is important to observe that the catechetical form was used in the collocation of both the Laws and Doctrines. "Afterwards Mahá Kassapa, having seated himself in the presidential chair, questioned the venerable Upali respecting the Vinaya in this wise. Brother Upáli, where was the first Párájika promulgated? My lord, at Vesáli. On whose account? On account of Sudinna, the son of Kalanda. With regard to what offence? To fornication. Then did the venerable Mahá Kassapa question the venerable Upáli on the offence, the cause, the offender, the primary law, the secondary law, the transgression and the non-transgression, relating to the first law enacted And the venerable Upáli explained as against mortal sin. he was questioned."2 Such was also the method employed in the synod in the collocation of the Dhamma:-" Brother

Ananda, where was the Brahmajála delivered? My lord, between Rájagaha and Nálanda," and so on. Though it is subsequently added that "at the conclusion of the questions and answers the five hundred Arhats repeated the texts together in the order in which they had been collocated," it is difficult to believe that all the five hundred rehearsed the long narratives prefixed to some of Buddha's discourses in the same words and style that they are now clothed in. Buddhaghosa's account of the synod is gathered from tradition, which was very probably embodied in the Simhalese atthakathas, and there can be little doubt that the main facts are correct; but that he drew largely from tradition, written and oral, and possibly in some instances from imagination, will I think appear clear to any careful reader of the com-Witness for instance his relation of Ananda's mentaries. mysterious entrance into the assembly: pathaviyam nimujjitvá attano ásane yeva attánam dassesi, ákásena gantvá nisídíti pi eke, "He plunged into the earth and showed himself in his seat, and also some say he went through the air and sat down." He does not say which version is correct, but is quite satisfied with both accounts, and is evidently quite willing to let his readers choose whichever they like. Buddhaghosa throughout all his writings appears to have set one great object prominently in view, namely to inspire reverence for what he considered as supreme authority. When he came to Ceylon for the purpose of translating the Simhalese commentaries, he found a great many extant at that time,2 and out of these commentaries, embracing no doubt various shades of opinion, and representing different schools of thought, he had to expunge, abridge, enlarge, and make a new commentary. Now how could he do all this, and at the same time preserve undiminished among future generations the same reverence and authority in which the older commentaries were held

¹ Puechávissajjanapariyosáne pañca arahantasatáni sangaham dropitanayen' eva ganasajjháyam akamsu.

<sup>3</sup> See note C.

by the Buddhists of that age? The thought struck him, as no doubt it would strike any careful reader of the Buddhist Scriptures, that a large portion of the writings contained in that canon appear to be explanations and definitions of terms used by Buddha, and also that a great many discourses said to have been delivered by Buddha to certain individuals have not been recorded.1 Now what more easy to conceive, or what more probable, than that they formed the nucleus of matter for the formation of a commentary, and that at the First General Council, which lasted seven months, the elders, who had all seen and heard Buddha, should have discussed them, and decided on the method of interpreting and teaching the more recondite portions of Buddhist philosophy? and what therefore if he should say in somewhat exaggerated language, "the commentary on the Digha Nikaya was at the beginning discussed (or composed, or merged into the body of the Scriptures) by five hundred holy elders"?—for the original words may admit of such a construction.2 Nor will this opinion appear merely hypothetical if we carefully peruse the account given by Buddhaghosa of the commentaries in his Samanta Pásádiká. In his metrical introduction to that work, after the usual doxology, he explains the necessity of having a proper Páli Commentary on the Vinaya, and then proceeds to set forth what he is about to do :-

Samvannanam tañ ca samárabhanto tassá mahá-atthakatham sariram

Katvá, mahápaceariyam tath' eva kurundinámádisu vissutásu Vinicchayo atthakathásu vutto yo yuttam attham apariccajanto, Tato pi antogadhatheravádam, samvannanam sammá samárabhissam;

Tam me nisámentu pasannacittá therá ca bhikkhú navamajjhimá ca Dhammappadipassa tathágatassa sakkacca dhammam patimánayantá.

Buddhena dhammo vinayo ca vutto, yo tassa puttehi tath' eva ñáto, Yo yehi tesam matim accajantá yasmá pure atthakathá akamsu

<sup>1</sup> See note D.

<sup>2</sup> Atthakatha adito vasisatehi pañcahi sangita.

Tasmá hi yam aṭṭhakathásu vuttam tam, vajjayitvána pamádalekham,

Sabbam pi sikkhásu sagáravánam yasmá pamánam idha pan ditánam.

Tato ca bhásantaram eva hitvá, vittháramaggañ ca samásayitvá, Vinicchayam sabbam asesayitvá, tantikkamam kañci avokkamitvá, Suttantikánam vacanánam attham suttánurúpam paridipayanti Yasmá ayam hessati vannaná pi sakkacca tasmá anusikkhitabbá. The translation is rather difficult, owing to the complexity and conciseness of the construction, but it may be rendered thus:—"In commencing this commentary, I shall, having embodied therein the Mahá Atthakathá, without excluding any proper meaning from the decisions contained in the Mahá Paccarí, as also in the famous Kurundi and other commentaries, and including the opinions of the Elders,-perform my task well. Let the young, the middle-aged, and the elderly priests, who entertain a proper regard for the doctrines of the Tathágata, the luminary of truth, listen to my words with pleasure. The Dhamma, as well as the Vinaya, was declared by Buddha, his (sacerdotal) sons understood it in the same sense as it was delivered; and inasmuch as in former times they (the Simhalese commentators) composed the commentaries without disregarding their (the sacerdotal sons') opinions, therefore, barring any error of transcription, everything contained therein is an authority to the learned in this priesthood who respect ecclesiastical discipline. From these (Simhalese) commentaries, after casting off the language, condensing detailed accounts, including authoritative decisions, and without overstepping any Páli idiom (I shall proceed to compose). And as this commentary will moreover be explanatory of the meaning of words belonging to the Suttas in conformity with the sense attached to them therein, therefore ought it the more diligently to be studied."

Now, in this important passage, Buddhaghosa make mention of three distinct commentaries, and refers to others then in existence, besides naming another authority called *Thera Váda* (the opinions of the Elders). The three commentaries enumerated are—1, Mahá Atthakathá; 2, Mahá Paccari;

3, Kurundi. Were these three commentaries separate works on the Vinaya, the Sutta, and the Abhidhamma respectively, or did they each embrace the whole of the Tipitaka? It is difficult to answer this question with positive certainty, but there are good reasons to incline to the latter opinion. glossarists (authors of the Tíkás) give but a very imperfect account of these works. However, it will be well to hear what they say of them: -Mahá atthakathá náma pathamamahásangíti-árúlhá mahákassapapamukhehi therehi katá mahámahindena ánetvá Síhalabhásáya katá mahá-atthakathá náma játá, "Mahá Atthakathá is evidently what was gathered in the first great Council. It was made by the elders, with Kassapa as their chief. Having been brought by Mahá Mahinda, and converted into the Simhalese language, it was called Mahá Atthakathá." It is clear, therefore, that this is the same commentary (atthakatha) referred to by Buddhaghosa in his Sumangala Vilásiní. Mahápaccari náma Sihalabhásáya ulumpam kira atthi tasmim nisiditvá katattá mahápaccarí náma játá, "It is said that there was a raft called in the Simhalese language Mahá Paccarí; as this work was composed on that raft, it was called Mahá Paccarí." Kurundattakathá náma Kurundaveluviháro náma atthi tasmim nisíditvá katattá kurundi náma játá, "There is a vihára called Kurundavelu; as the work was composed there, it was called Kurundi." In their remarks on the word ádi in this verse, the authors of the Sárattha Dípaní and the Vimati Vinodaní Ţíkás enumerate two works called Andhakatthakathá and Sankhepatthakathá, but the Vajira Buddhi Tíká gives Cullapaccari and Andhakatthakathá.1

Thus it will be seen that the information furnished to us by the glossarists respecting these lost works is very meagre, and leads one to suspect that at their time almost all traces of them had disappeared, although in the Páli Muttaka (a work written by one of these glossarists) reference is made to all the three commentaries. Mention is also made of the Mahá Atthakathá and another commentary called Múlatthakathá at the end of the Dígha and Majjhima

<sup>&</sup>lt;sup>1</sup> See Preface to Minayeff's Pátimokkha, pages vii and viii, notes 9, 10, 11, 12.— R.C.C.

Nikáyas.1 In the Sammoha Vinodaní (commentary on the Vibhanga), Buddhaghosa states that he composed that work "by taking the substance of the old commentaries."2 It appears pretty clear therefore that all the Simhalese commentaries enumerated by Buddhaghosa were each separate works on the entire body of the Tipitaka. Those comments were probably more or less directed to the elucidation of one or more of the Pitakas, but that each of them purported to be a separate and independent commentary on the entire

Tipitaka I think there can be little room to doubt.

In his introduction to the Samanta Pásádiká, Buddhaghosa uses the following words: "The Dhamma as well as the Vinaya was declared by Buddha, his sacerdotal sons understood it in the same sense as it was delivered; and, inasmuch as in former times they (i.e. the Simhalese commentators) made the commentaries without rejecting their (i.e. Buddha's immediate disciples') opinions, therefore, etc." This passage will, I think, explain the sense in which he uses the word Atthakathá in his preface to the Sumangala Vilásiní. For two things are clearly deducible from the passage, viz., that when Buddhaghosa speaks of the Atthakatha that existed in the earliest days of Buddhism, and almost contemporaneously with Buddha, he only refers to the method of explaining and interpreting the Buddhist Scriptures adopted by Buddha's immediate disciples, and also that Mahinda was not the sole composer of the commentaries, but that there were others who, either jointly with Mahinda or separately, composed comments on the Sacred Canon.3 One of the glossarists in expounding this passage takes a very sensible view of the matter. His words are :- Buddhena dhammo vinayo ca vutto ti pálito ca atthato ca buddhena bhagavatá vutto, na hi bhagavatá avyákatam tantipadam atthi, sabbesam yeva attho kathito, tasmá sammásambuddhen' eva tinnam pitakánam atthavannanákkamo pi bhásito ti datthabbam, tattha tattha bhagaratá parattitá pakinnakadesaná yeva hi atthakathá, "The Dhamma as well as the Vinaya was declared by Buddha; that is, it was declared

<sup>1</sup> Mülatthakathasaram addya, etc.

<sup>2</sup> Pordnatthakathdnam sáram ádáya.

See note E.

by the blessed Buddha in words as in sense, for there is not one scriptural term which has not been defined by the Blessed One: the sense of all words has been truly expounded. Therefore it should be borne in mind that it is by the all-perfect Buddha himself that even the method of interpreting the three Pitakas has been propounded. In fact, the desultory discourses made by the Blessed One here and there, are what is meant by the word Atthakathá." My view of this subject therefore receives additional weight from the exposition given of Buddhaghosa's meaning by his glossarist.

Nor will this view receive less support from collateral facts connected with the life and ministry of the "Great Sage," who gave to the world a creed that has stood the test of time and the progress of the human intellect during upwards of twenty-four centuries. He renounced the world and all its pleasures in the vigour of life, being then in his twenty-ninth year, passed his days for six long years in a wilderness, subjecting his delicate frame to a severe course of mortification and penance, and at length, receiving the light of that philosophy by which he thought himself capable of explaining all the mysteries of nature, he entered upon a career of religious reformation which lasted for forty-five years. During this long period of uninterrupted labour, he not only preached and argued and conversed and travelled, but also legislated, and gave to his disciples a code of monastic discipline surpassed by no other system of monachism either in the East or West. Can it be imagined then that the Tipitaka contains all the words of Buddha? Undoubtedly not. To the followers of that faith it may contain "all that is necessary to salvation," but it assuredly does not record all and everything done and spoken by this almost superhuman intellect. If John could say of the pious Nazarene of Judæa that if all the things he had done should be written every one, the world itself could not contain the books, what length of hyperbole must be used in reference to the doings and sayings of the great philosopher and teacher of India, whose term of unremitted labour so greatly exceeded that of Jesus of Nazareth?

It is a hopeless task, as Mr. Childers says, to inquire into what has become of the old Simhalese commentaries. No trace of them now exists. The early diffusion of the Páli language among the priesthood and learned laity, and the subsequent introduction of Sanskrit literature and Sanskrit verbiage into the once pure Elu, must have so choked that language that it died out early, and its memory was cherished only by the lovers of Parnassus. For all philosophic and religious purposes the Páli and the Sanskritized Simhalese began to be used from a very early period, and continue to be used to the present day.

L. Comrilla Vijasinha.

Ratnapura, Feb. 21, 1871.

#### NOTES.

(By THE AUTHOR.)

Note A.—It is my opinion, although contrary to that of orthodox Buddhists, that the Buddhistic philosophy, in so far as regards its asceticism and self-purification, is derived from the Hindu system of Patanjali. I think a perusal of the Patanjali Yoga and its Commentary by Bhoja Rája will instinctively lead one to this conclusion, taking for granted, as it undoubtedly appears, that the Patanjali Yoga Sútra was anterior to the Buddhistic era. It is quite clear that Buddha's first ascetic teachers, Ālára Káláma and Uddakaráma Putta, were followers of this system.

Note B.—It is evident from Buddhaghosa's narrative of the convocations that the Council of the Five Hundred (pañcasatikasangiti) assembled within two months from the date of Buddha's death. The proposal by Mahá Kassapa to his brethren to go to Rájagaha for the purpose was made fourteen days after Buddha's death:—Atha tathágathassa parinibbánato sattasu sádhukilanadivasesu sattasu dhátupújádivasesu vitivattesu addhamáso atikkanto. After coming to Rájagaha the Theras were occupied during the first month in causing repairs to be made to the monasteries already abandoned by the priests, and afterwards informed the king Ajátasattu that their work was over, and requested him to furnish a hall of assembly (sannisajjaṭṭhánam):—Therá paṭhamamásam sabbavihárapaṭisankharanam kárápetvá rañño árocesum. The king accordingly

<sup>&</sup>lt;sup>1</sup> The old Simhalese Prakrit, still used in writing poetry. The Simhalese now spoken in Ceylon contains a vast admixture of words borrowed from Sanskrit.—R.C.C.

caused an ornamental hall to be built "at the mouth of the cavern Sattapanni, on the slope of the mountain Vebhára." Making an allowance of a fortnight for the preparation of this hall, the First Buddhist Synod may be said to have assembled two months after the death of Buddha.

Note C.—It is evident that Buddhaghosa's task was not a simple translation of the Simhalese commentaries into the Páli language. No great ability was required for this purpose, much less extraordinary talents. In his introduction to the Vinaya Atthakathá, he tells us briefly what he undertook to perform, "to translate, abridge, collate, systematize, etc.," in fact, to make a Páli variorum edition of the Simhalese commentaries. No wonder that the learned Simhalese priests of that period thought it prudent to test beforehand his latent talents by giving him a text from the sacred canon as a subject for a thesis. The result of this test was, as we know, the Visuddhi Magga, embodying the entire system of Buddhism.

Note D.—Ekamantam nisinnassa kho Yasassa kulaputtassa Bhagavá anupubbikatham kathesi, seyyathidam dánakatham silakatham saggakatham, kámánam ádinavam okáram sankilesam nekkhamme ánisamsam pakásesi: yadá Bhagavá añňási Yasam kulaputtam kallacittam muducittam vinivaranacittam udaggacittam pasannacittam atha yá buddhanam sámukkamsiká dhammadesaná tam pakásesi, dukkham samudayam nam sámukkamsiká dhammadesaná tam pakásesi, dukkham samudayam nirodham maggam, "Then the Blessed One related to the genteel Yasa, who sat by his side, an orderly series of narratives, viz.: regarding charity, restraint, and heavenly pleasures; he discoursed on the evil, the vanity, the pollution of sensual pleasures, and the blessing of self-abnegation. Then when the Blessed One saw the genteel Yasa with a mind pliant, tender, unbiassed, jubilant, and complacent, he proclaimed that doctrinal truth originally discovered by Buddhas alone, viz., sorrow, its source, its destruction, its method of destruction."

Note E.—Mahinda came to Ceylon about 236 Anno Buddhæ, and Buddhaghosa about 956 A.B., so that a period of 720 years elapsed between the advent of the former to Ceylon, and that of the latter. During this long interval a goodly number of works on the tenets of Buddhism must have been composed. Perhaps the frequent allusions to the Mahá Aṭṭhakathá and Múlaṭṭhakathá, the "great commentary" and the "original commentary," refer to Mahinda's original work, and the Paccarí, Kurundi, etc., refer to subsequent compilations.

ART. XV.—The Poetry of Mohamed Rabadan, of Arragon. By the Right Hon. Lord Stanley of Alderley.

(Continued from p. 140.)

THE portion of Rabadan's poem given in the present part of the Journal relates the history of Shaibeh or Abdulmutalib, the son of Heshim, and of his son Abdullah, the father of the Prophet. It contains a narrative of the offering up of Abdullah in sacrifice by his father, with regard to which see the following observations of Sir Wm. Muir, vol. i., p. cclix. That writer believes the story, because, as he says, "the simple desire to establish an analogy (between it and Abraham's intended sacrifice), had there been no facts to found the story on, would have led to a very different fiction; for Abraham was commanded to offer up his son, and the Mussulmans believe he acted piously in obeying; whereas they hold Abdulmutalib, who was borne out by no such divine order, to have been wrong both in the vow and in his attempt to fulfil it." These observations are supported by this poem, for Rabadan does not appear to draw any analogy between the sacrifice by Abraham and that by Abdulmutalib, whereas by using similar expressions he seems very clearly to intend to point out the analogy between the Deluge and the end of the world. The opinion which Sir W. Muir describes as the prevailing one with respect to Abdulmutalib's act is here spoken by the sage Ykrama. It was with reference to the incident related in this poem that Muhammad spoke of himself as ابن الذبيحين, or as the son of the two offered up in sacrifice; this is not considered by some as necessarily implying that Ishmael and not Isaac was the son offered up by Abraham, since Isaac might, according

to Arab custom, be spoken of as an ancestor equally with Ishmael. Though it is not expressly stated that Ishmael and not Isaac was offered up in sacrifice, the majority of Mussulman writers believe that it was Ishmael, and consider this view as borne out by the words of Genesis xxii. 2, "Take now thy son, thine only son Isaac."

The latter portion of this part of the poem describes the

marriage of Abdullah with Eminah, and his death.

I hope that in the next part of the Journal the publication of Rabadan's poem may be concluded: it will contain the life of Muhammad, and two short poems, one of which is wanting in the Paris MS.

### ISTORIA DE ABDULMUTALIB, CUYO NOMBRE SE LLAMA JAIBACANAS,¹ HIJO DE HÉXIM: CONTIENE QUATRO CANTOS.

Jaibacanas fué criado En la noble Yazeribá,<sup>2</sup> En custodia de su madre, En buena y santa dotrina; Y luego dió á conocerse Entre aquella gente ynica, Por que su sangre y nobleza Es bien sea conocida. Todos le quisieron mal, Por que es ya regla sabida Que la enemistad se hereda Y la amistad muntiplica.<sup>3</sup> Siendo ya de4 siete años, Fué su fama tan temida, Que sus obras<sup>5</sup> los espanta Y la luz los consumia; Y por do quiera que andaba En altas vozes decia: "Yo soi el hijo de Héxim, El de la linea escogida." Esto es lo que abominaban, Esto es lo que aborrecian, Tanto que ya procuraban El acortarle la vida. Diciendo aquellas palabras, Sucedió acaso que un dia Pasaba un hombre de Maca Y notó lo que decian; Paróse y dixó: "mancebo, Díme ahora por tu vida, Quien eres, de á do deciendes?"

Y él al momento le esplica Su nombre y el de su padre, La parte do decendía, Y dixó mas: "Pues la suerte Ha querido que tu via Fuese por este lugar Lleva esta mensagería: Diles á mis nobles tios Que ¿ por qué en tan pocos dias Olvidaron de su hermano La encomendada alguaçía ?6 ¿ Por qué me han desmamparado? ¿ Por qué tan presto me olvidan? Por qué tan solo me dexan Entre esta gente enemiga, Arredrado de mi patria, Guerfano, sin compañía; Sin saber quien son mis deudos, Ni yo saber donde habitan? Asi el Señor te socorra En todas tus agonias, Que luego en llegando á Maca Aquesta encomienda digas; No los pongas en olvido, Duelate de mi manzilla." Este llevó la embaxada, Y luego al siguiente dia Pusó por obra Almutálib De partir á Yazeriba, En un caballo ligero, Su espada al lado ceñida,

<sup>&</sup>lt;sup>1</sup> Este nombre de Jaiba debe pronunciarse Xaiba شايب, y quiere decir encanecido. <sup>2</sup> يثرب nombre antiguo de Medinah.

<sup>&</sup>lt;sup>3</sup> Multiplica, P. <sup>4</sup> De edad de, P. <sup>5</sup> Sombra, P.

Que la exercitaba bien, Quando menester la habia.¹ Lleva una adarga enbrazada Y pendiente de la silla, Y el arco del fuerte Ismáel Que á él le perteneçia. Este fué él que por sus hechos Alcanzó tal nombradia, Que adonde llegó su nombre, Era su espada temida. Cubierto Îlevaba el rostro Con la toca que traia, Para no ser conocido De los que le conocian; Y por que su intento era Llevar lo que pretendía Por hurto, o como pudiese, Por paz ó guerra reñida. Llegó al fin de su jornada; Y antes de entrar en la villa, Vió los mancebos jugando Quen mil prebas² se exercitan. Estaba Jaiba³ con ellos Y entre otras prebas4 que hacia Era arrojar un gran canto Al que mas trecho le tira; Y como llegó Almutálib, Conoció la luz altiva Sobre la frente de Jaiba Que le dió grande alegria; Y mas que oyó á su sobrino, Quando el canto despidía, Dezir: "anda hijo de Hêxim, Señor de la santa villa." Llamóle aparte Almutálib Con amorosas cariçias, Y diósele á conocer Y dixó á lo que venia. "Mira, dice, si es contento De ir en mi compañia A tu patria, entre tus deudos, A tu principado y silla, Donde vivieron tus padres Y toda tu varonia; Y donde manda el Señor

Que sus suçesores vivan. Mira, pues, sobrino amado, Ques lo que te determinas, Que no he salido de Maca Mas de por la causa dicha." Qual suele el azor que aguarda La seña, y quando le avisan,6 Como la xara aremete Donde la caça divisa; Asi el brioso mancebo Que vió la seña esculpida En la lengua de su tio, Cosa quel tanto codicia, Sin responderle palabra, Con presteza nunca vista, Salta á las ancas, y dice: "Suelto las riendas y pica: Salgamos de entre esta gente, Antes que de mi partida Tenga noticia mi madre Y por suerte nos la ynpida." Asi los dos á caballo, A grande priesa caminan, Contentisimo Almutálib De la ocasion sucedida; Viendose con su sobrino Que mas que á sí lo queria. Pasan por Deluilefata A la quel sol se ponia,8 Y alli tomaron refresco Del cansancio que traian. Y como cerró la noche, Por el monte se metian, Por no topar con algunos Que les estorben su via. Pues quando menos cuidaban, Y con mas cuidado aguijan, Oyeron un gran ruido,10 Grande gente y voceria: 11 Pararonse de su andar Por ver que cosa sería, Y al fin se certificaron Que sus pisadas seguian. Dixó Almutálib a qué haremos Sobrino, en esta agonia?

<sup>1</sup> Le hacia, P. 2 Pruebas. 3 Abreviatura de Jaibacanas. 4 Sic, P. 6 Silvan, P. 7 Dilhuleyfat, P. 8 A quien. 6 la hora que se ponia el sol. 9 Tenian, P.

<sup>8</sup> Es decir: á la hora que se ponia el sol.
10 Oyeron de armas y gente, P.
11 Grande estruendo y voceria, P.

¿ Como nos asconderemos Si esa luz que va influida En tu frente nos descubre Y nuestro hecho¹ publica?" Dixó Jaiba; "O' mi buen tio! Si quieres que no sea vista Mi luz, cubreme la cara Con mi toca y será ynpedida." Asi lo hizó Almutálib, Viendo tan gran maravilla: "Grande es tu hecho, sobrino, No hay para que esté escondida, Que aquel que te honró con ella Será en nuestra compañia. El será en nuestra defensa, Nuestro amparo y nuestra guia; A él solo te encomiendo El te guarde y te bendiga." Estas palabras hablaba, Quando mas con gran vozería, Cargados de todas armas Llegó la caballería: Siempre pensaron que fuesen Los baraganes de estima, De la gran casa de Salma, Que de ordinario tenia Gran gente de parentesco, Y otros que su pan comían; Y que venian por Jaiba Para volvello a su villa; Mas presto vió el desengaño Jaiba que los conocía. Dixo, mirando á su tio: "Malas señas se divisan, Otro es de lo que cuidamos Y aun peor si bien se mira; Al contrario lo juzgamos; Si no me engaña la vista, Estos son mis enemigos Que vienen en busca mia, Que de ordinario procuran Mi muerte y fin de mis dias." Quando Almutálib oyó Lo que su nieto dezía,2 Apretósele el temor, No sabiendo lo que haría;

Mas por su amado sobrino Que por temor de su vida. Llorabale amargamente, Viendo su edad tan florida, Y aquella luz de su cara Que hasta los cielos subia; Y que de sus enemigos Ya escapar no se podía. Del todo desconfiado De poder librar sus vidas, Besabale entre sus ojos Y estas palabras decía: "O' caro y dulce sobrino! Si yo hubiera noticia Destos que aqui<sup>3</sup> te persiguen, Y que tan mal te querían, Nunca te hubiera sacado De dentro de Yazeriba: Mas por Alláh te aseguro Que has de ver aqui tendida Mi persona, en este llano Despedazada y rompida, Primero que vea en la tuya Una minima herida." "Esfuerza, esfuerza, buen tio, No te espantes ni te aflijas! Dixo Jaiba," questa noche Has de ver gran maravilla En el hijo de tu hermano Con el ayuda divina." Ellos estando en aquesto Llegó la tropa enemiga, A vista de donde estaban: Unos á otros se miran. Dixó Alhaçan,4 La ocasion Y el camino que traian<sup>5</sup> Fueron<sup>6</sup> aquellos mozuelos Que con Jaiba conbatian, Tirando el canto ó la barra, Oyeron lo que decian Tio y sobrino, y al punto Luego á sus padres avisan; Y aquella noche marcharon De la Judaica quadrilla Setenta hombres armados, Con la sedienta codicia

6 Fue que.

De ver cumplido el deséo Que guardaron estos¹ dias. Que era ver á Jaibacanas Donde á costa de su vida Pudiesen vengar la rabia Que contra la luz tenían. Al fin llegaron al punto Que deseado tenían, Sobre lijeros caballos, Y lanzas gruesas tendidas, Sus adargas enbrazadas, Armados de brazo² arriba, Y á resistir tantas armas

Tanta rabia, tanta yra,
Sale un muchacho desnudo
Que á los diez años no arriba,
Figura del gran David
Con el soberbio Golías.
Dexa á su tio llorando
Y grande trecho sésvía³
A recebir la canalla
Con gran valor y osadía,
Y antes que á él se allegasen
Con voz humilde y sencilla,
Alzando al cielo sus ojos
Estas palabras decia:

### ORACION.

"Señor, que la escuredad Y las tenebrosas sombras Con tu claredad encubres, Y alumbras á quien te adora. Sabio, que en los corazones Mas encerrados te asomas, Y lo mas oculto sabes, Pues no se te asconde cosa, Oidor de quien te llama En su apretada congoxa; Socorredor de las cuitas, Recebidor de las obras, Ordenador de los plazos Que tus halecados4 gozan; Pues punto no se dilatan<sup>5</sup> De lo que pinta tu hoja.6 Si en tus secretos juicios Adelantaste la obra Esta, que tus escogidos Han gozado siempre y gozan: Suplico á tu gran bondad No permitas questa ora En mi poder se derogue Por ser mis fuerzas tan pocas;7 Sino que arredoblezcas<sup>8</sup> La gracia de que le adornas; Y en el enxalzamiento suba De lo que ha sido hasta ahora. Señor, por el omenaje Desta luz alta y preciosa Con que sellaste mi frente,

Y me ennobleces y adornas, Te ruego que me defiendas Desta compaña alevosa Que quieren matar tu luz Por que su gran prez ignoran. Todas las ayradas manos Ante la tuya se postran, Y las poderosas fuerças Solo á tu nonbre se postran. Pues ¿ como tendré yo miedo A los que en tu ofensa osan Levantar los brazos fieros Con indignacion rabiosa? Si en mi encerraste el secreto Que á tus criaturasº ynporta, Y adelantaste mi hecho, Como esta luz lo denota; Por ella vuelvo à rogarte Que en este paso me acorras Y estos que atajarla quieren, Tu grande poder conozcan. Y caiga el azote sobre ellos De la furia cavernosa: Que Tú á los soberbios hundes. Y á los humildes coronas"

"Por Allah," dixó Almutálib, Que al tiempo questo decia Le alcançaban ya las puntas De las lanças enemigas; Y qual la pelota vuelve

Del suelo hacia quien la tira, O' como resurte, quando Hiere en la pared maçiza; Desta propia suerte fueron Con tal fuerza rebatidas, Como si atras las tiraran Con aquella fuerça misma. Ellos espantados desto, Recio los caballos pican, Pugnando llegar á Jaiba; Mas por demas los herian Que los cuellos encorbados Revuelven y el cuello erizan; Dando bufidos, corcobos,<sup>2</sup> Huyen de espanto y se enpinan. El animoso mancebo Que sin temor se los mira, Corridos y avergonzados, A vozes les dice y grita: "; Ah suciedad de Judios, Canalla torpe y maldita, Naturaleza de ximios.3 Gente ynfame y abatida! ¿ Que os parece del misterio Con que el Señor os avisa, Con que nuestra luz enxalza Y vuestro intento castiga? Quereis amatar la luz Que á los altos cielos fixa4 Y el Señor la especialó Por su gran sabiduria, Para guiar á sus siervos Y acabar la idolatría? Y puesto su grande amparo En<sup>5</sup> vuestra intencion maligna Y han menguado vuestras fuerzas? Por tanto, gente perdida, Volved en paz y seguros,

Por tanto, gente perdida, Volved en paz y seguros, Dexad esa fantasía, Sino rogare ad Alláh Que confunda vuestras vidas." Respondió el capitan dellos Que se llamaba Letia "¡O hijo del fuerte Héxim Dexate desa porfia,

Que nosotros no dudamos Questá la honrra cunplida En vos los de Abdulménef Aquien los demas se humillan; Pero vivis engañados, Segun tu razon publica, En decir que por matarte Salimos de nuestra villa: Antes bien somos venidos Por volverte a Yaciriba A los ojos de tu madre, Questá triste y afligida.<sup>6</sup>] A mas desto tú bien sabes La amistad y cortesia, Con que todos te tratamos; No hay razon porqueso digas, Que tú eres nuestro contento, Nuestro placer y alegria, Candela de nuestros ojos, Regalo de nuestras vidas." "Todos sois mis enemigos, Esto es cosa conocida," Replicó Jaiba animoso, "Ya está vuestra intencion vista. Siempre me quisisteys mal Por que toda vuestra vida Me mirasteys con mal ceño, Siempre con cara finjida, Y todas vuestras razones Son fundadas en mentira; Si no que vuestras cautelas Han salido cuesta arriba, Y no han llegado al 7 efecto A que vuestra intencion aspira; Por que la promesa inmensa De fuerza há de ser cumplida." Y con un desden gracioso, Sin muestra de cobardia, Los dejó y se fué á su tio A dó dexado lo habia. Como lo vieron volver, Los Judios decendian A priesa de sus caballos, Y con una infernal ira Sacan las fuertes espadas

Y á pies les acometian.

Quando los vido Almutálib, De hecho se apercebia Para salir al encuentro; Mas Jaiba se lo impidia Diciendo: "agora veras La segunda maravilla Ruegote que te estes quedo, Estate agora á la mira, Dame tu arco y las xaras,1 Que yo haré la conquista." "No podran," dixo Almutálib, "Tus pocas fuerzas regirla,2 Por que no hay en toda Maca Hombre que á lo tal se atreva, Si no los de Abdulmúnef Por ser de su casa antigua: Por su santa fortaleza. Este es el arco de Ismael Que tu padre lo tenia En Axem, quando murió Y á mí quedó remitido; Con él demandamos agua Y otras muchas rogativas Que su divina bondad Nos tiene ya concedidas." " Damela, pues, dixo Jaiba, "Que esta prenda á mi es debida, Que yo tambien soy de aquellos, Aunque mi edad lo desdiga." Y tomandole en sus manos, Con tal fuerza la impelia, Que casi los dos estremos En uno juntar hacia. Armóla, como si fuera Varon ya de la edad cumplida, Y como sí el arco fuera De verde mimbre cogida. Ya los Judios llegaban, Quando tomando una vira,3 El diestro joven se apunta, Y al mas orgulloso tira; Dióle por el corazon, Y luego en tierra caia, Dando vozes como fiera El alma infernal vomita. Y sin perder ocasion, Otra jara despedida,4

Y otra luego, y tras de aquella La quarta saeta emvia, Tan ciertas que todas quatro Rebataron quatro vidas; Y quando flechaba el arco, En altas voces decia: "Yo soy el hijo de Héxim Jaibacanas me apellidan." Dixo el traidor de Letia:5 "Esa razon averigua, Que no pare la culebra Sino ponzonosas viboras," Y volviendose a los suyos,6 Les dice!" gente vendida! ¿ No heis verguenza que un mo-Vuestro poder afemina?" Salgamos de un tropel todos Y de impetuosa corrida Demos sobrellos con furia, Y mueran de arremetida; Aunque de nos maten<sup>7</sup> diez, Pues les quitemos las vidas, Viviran despues honrrados Los que de nosotros vivan." Esto dixo el enemigo Y hechos todos una piña, Fueron á les embestir; Mas antes que les embistan Temieron de las saetas La fuerza con que venian; Y al fin se determinaron Pedir concierto, y decian A Jaiba, como valiente: " Pidimoste en cortesia Que apartes de nos las flechas, Que tan sin razon nos tiras, Y veremos entre todos El mejor camino y via Que habrá para que te vuelvas Aqui en nuestra compañia. Mira que á todos nos pesa Que salgas de nuestra villa, Por que al claro nos agravias, (En que de nos te desvias);8 Mira que al fin has nacido Entre nosotros, y mira

<sup>1</sup> Jaras, P. 2 Regilla, P. 3 Bira, P. Saeta. 4 Jara despedia, P. 5 Letiata, P. 6 Judios, P. 7 Mate, P. 8 P.

Que todas nuestras mugeres Te han servido de nodrizas: En sus haldas 1 te criaste, En sus pechos te tenian, Y en pago de estos regalos, Y en pago de la agonia Que todos por tí pasamos, Nos tratas de aquesta guisa, Que has muerto de nos quatro De la gente mas lucida; Y todos lo hacemos bueno, Todo se dexa v se olvida, Aunque fueran otros tantos; Entiende que mas se estima De nosotros tu contento, Que quanto hay en esta vida. Dexa á tu tio Almutálib, Vaya en buenhora su via, Y tú vuelve con nosotros A tu natural guarida, Donde viviras honrrado Y á donde es razon que vivas: Y no quieras caullebar La conduelma y gran mancilla De tu madre y de tu aguelo Por tu arrostrada salida,2 Sin dispidirte de naide 3 Y sin que fuera entendida De toda tu parentela O' á los dos dieras noticia. O si los vieses, mancebo, Como los dos se lastiman, Moverte han á compasion Las lagrimas que destilan! Como se razgan sus caras, Como gimen y apellidan! Ea pues, querido Jaiba, Resuelvete y determina, Considera estas razones Que tan de admitir son dignas." Tales las razones fueron Que aquel traidor proponia, Que ya de su buen sobrino Almutálib desconfia; Y dixo, casi llorando; "Ya sabes que mi venida

Solo por ti fué de Maca, Por que en tu ditado y silla Vivas como tus pasados Han vivido 5 en reta linea; Mas veo tantas razones Como estos te notifican, El amor con que te llaman La honrra con que te albrician, La fama en que estás entre ellos, 6 Como todos te acarician: Saben tu claro linaje, Tu estado y caballeria; Si te contenta ir con ellos Ves en la hora bendita. Y quando el tiempo te llame, Siendo ya de edad cumplida, Tú te volveras á Maca. Como tu deuda te obliga." Dijo Jaiba, como te han decebido,7 Y quan presto facilitas Sus razones de estos sucios. Y como los acreditas. ¿ No sabes que son Judios, Canalla torpe y maldita, Malvados v fementidos, Llenos de engaño y falsias? No te ablanden sus razones Que no hay verdad que estos digan, Compañeros de Luzbel, Que siempre siguen su via. Dexalos ir con la saña Del señor, y con la s ira." Holgóse de esto Almutálib, Al punto se apercebia: Toma su espada v adarga Y contra el traidor de Leitia, Se sale como un leon Que el suelo temido 9 pisa. Gritabale en altas voces Y estas palabras decia: "Tú que has echado al ayre Tantas razones fingidas, Embueltas entre cautelas, Entre engaños y mentiras, Dexa el hablar doble y falso

<sup>&</sup>lt;sup>1</sup> Faldas, P. <sup>5</sup> Venido, P.

Y mira si en tu quadrilla Hay quien con mí, mano á mano Acabe nuestra porfia, Salga luego que le aguardo, Ques bien que las obras digan Lo que la lengua blazona, Por que esto ansi se averigua." Dixo Letia á los suyos: "Ya veis que nos desafia Este quen su genealogia Alcanza mas nombradia, Capitan de los taquies,1 Flor de la baragania, Reprobado 2 en toda Arabia En sus ciudades y villas, Y nadi vencer le puede Ni su fuerza resistilla; Y si á él vencer podemos Y le quitamos la vida, Muerto es su sobrino Jaiba, Y su luz esclarecida. Ea guerreros famosos, Que el que le quite la vida, Le mando cien datileras Nuevas, tiernas, femininas." Respondió el uno de aquellos Que Chemio se decia,3 "No quiero de ti otra cosa Que me des si le vencía Mas de que me afranquezcas La deuda que te debia." "Plazeme, dixo el traidor, Y mas otro tanto encima." Asi fué contra Almutálib Que á recibirlo salia, En cuyas valientes manos Dió la vida descreida: Hendíóle hasta los pechos Y luego díxo Letia: "Muerto es el Chemio: 4 salga otro Salió, y por la misma via

Y tú te estés á la mira? Salta tú al campo con él, Que solo con tu salida Fenecerá la contienda; Por que es cosa conocida Que su fuerza entre tus manos Al punto será rendida." Dixo el traidor: "yo saliera, Sin que nadi me lo diga, Si no por el gran respeto Que á su madre le tenia Y á toda su parentela : Y por que Zalma no diga Que yo le maté á su hijo: Pero pues va tengo vista Vuestra voluntad, saldré Pues la ocasion lo pidia." Alteróse 5 el enemigo, Mostrando grande osadia; Quedáron en unas blancas ojas De fino acero lucidas, Sus fuertes miembros armados: Persona grande y fornida Con una adarga embrazada, La espada al lado ceñida,6 Saltando qual suelto gamo Quel mirar lo atemoriza, Diciendo; "Llama á tu nieto, Que salga en tu compañia, Para que los dos á una Me entregueis aqui las vidas" Llama, responde Almutálib, A tu cobarde quadrilla, Que te libre de mis manos; Pues antes que venga el dia Heis de morir todos juntos Sin quedar persona viva." Ansi los dos se toparon Con fuerza tan sin medida, Como si fueran dos peñas O' como quando martillan Los herreros en el yunque. Ansi con tal osadia Se daban tan fuertes golpes, Que no hay lengua que lo diga. Los Judios esforzaban A su caudillo y su guia,

Muchos Judios murieron,

Hasta que dixo uno de ellos:

¿ Quieres que nos mate á todos

"Letia, esto mal se pinta.

De la gente mas lucida,

<sup>1</sup> Justos.

<sup>4</sup> Chemi, P.

<sup>2</sup> Dos veces probado. 5 Ahorrose, P.

<sup>3</sup> Chemio, P. 6 Variante, alzada y sallida.

Y admiranse que Almutálib Tanto se le defendia. Asi mismo Jabaicanas Que á su noble tio mira, Comiendose de coraje De ver que se sostenia Un hombre solo á su tio, Lo que muchos no podian: Pone la vira en el arco, Sin poder regir su ira, Y al traidor de Leitia apunta Y con tal fuerza la embia, Que le dió por las espaldas Y le pasó á la barriga. Quando los Judios vieron Muerto al que los defendia, Movidos de grande rabia Contra Jaiba acometian; Si no que les puso pausa Una grande vozeria Que vieron venir tras ellos;

Y vueltos á dó la oían En una gran polvoreda Vieron como relucian Armas, espadas y adargas, Grebas, brazaletes, picas; Grande tropa de caballos, Gente esforzada y lucida, En sudor y polvo embueltos. Llegaron á grande prisa Quatrocientos caballeros; Enmedio de ellos venia Zalma, su padre y parientes, Por que tuvieron noticia De los traydores Judios El intento que traian; Y en el punto que llego Todo la Caballeria Sin admitirles palabra, K la canalla maldita Los degollaron á todos, Sin quedar persona viva.

#### SEGUNDO CANTO DE LA ISTORIA DE ABDULMUTALIB.

Muertos todos sus contrarios, Y cesando el grande estruendo, El suelo corriendo sangre, Cubierto de cuerpos muertos; Cansado de combatir En tantos fieros encuentros, De descargar tantos golpes Y dividir tantos miembros; De sustentar la batalla Toda aquella noche en peso, Que quando de bronze fuera, Quedara roto y deshecho; En su caballo arrimado Y desaogado el aliento, Que suspendido le tubo, Mientras duro el vencimiento; Estaba el fuerte Almutálib Apercebido de nuevo, Las armas al fuerte brazo Y el animoso denuedo Contra los que le ayudaron, Como fieles compañeros: Que no es socorro el socorro Baxo de interese hecho. Si á su sobrino le piden

Quiere morir defendiendo Su opinion, sin admitir Mas razones y conciertos. Toma la flecha en la mano. Y contra los quatrocientos Que vinieron en su ayuda Apuntó el agudo yerro. Dixo Zalma en altas voces, Que bien los dos lo entendieron: "Quien ha sido el atrevido Que sin mas comedimiento, Sin darme parte ninguna, A sus parientes ni deudos, Que me han sacado mi hijo De mi casa, y mi sosiego?" "Yo soy," responde Almutálib, Quien lo ha traido á este puesto, Y el que pretende l'evarlo A cumplir mi justo intento; Al estado de su honrra, A la silla que tuvieron Todos sus antecesores, Sus padres y sus abuelos, A ser señor de la villa Que tuvieron todos estos,

Y al mas noble potentado<sup>1</sup> Que hay en todos los imperios: Y por si acaso me ignoras En las señas de mi gesto, O' finges que no te acuerdas De aquel ya pasado tiempo; Almutalib es mi nombre, Del fuerte Curax 2 soy nieto: Hijo soy de Abdulmunef, De los de Curax deciendo.3 Hermano de tu marido Héxim el del cumplimiento, Quien siempre le acompañó Mientras vivió en este suelo. Soy quien te casó con él, Que si bien te acuerdas de esto, Mucha sangre agena y propia Vertimos por tu respeto; Tio carnal de tu hijo, Y padre en todos mis hechos; Quien mas que tú le desea Vida, salud y provecho." Quedó Zalma tan contenta Que con el rostro risueño Miraba al buen Almutálib, Estas palabras diciendo: "Pues, como, querido hermano, Cupo en ti tan grande yerro, Sin decirme á mi palabra, Sin mas hacer cumplimiento Con esta que lo ha parido, Con mi padre y con mis deudos, Sacarlo de mi ciudad Y ponerlo en tanto riesgo, Que si no por esta gente Hubierades sido muertos? Y tú radiante hijo mio, Que te olvidabas tan presto De los pechos de tu madre, Qual si fueras hijo ageno, Puedes creer una cosa Por el Señor que te ha hecho, Que si no tuviera aviso De estos traidores sedientos, Que por matarte venian. No fuera en tu seguimiento,

Por que en venir con tu tio Por averiguado tengo, Que vas con la mayor honrra Que te puede dar el suelo; Y pues que al fin has sallido De junto mi lado diestro, Y yo he venido á este punto Con este acompañamiento, Presente está aqui tu tio, A tu discrecion lo dejo, Que escoja la compaña Que te diere mas contento. Si quieres irte con él Tu voluntad no la tuerzo, Y si con mi quies volver, Ya sabes lo que te quiero." Abajó Jaiba los ojos Y estubo un rato suspenso, Que le cobija la cara Aquel vergonzoso velo: Mira una vez á su madre Y aquel pecho blando y tierno Que lo llevó nueve meses Y le dió el primer sustento; Otra vez mira á su tio Y aquel tan debido deudo Que le obligaba á seguir El mandamiento paterno: Al fin respondió á su madre Con un singular respeto: " A tanto merecimiento, Querria seguir mi tio, Si á ti no desobedezco; Temo ad Alláh si te enojo, Y por tanto me resuelvo Que iré donde tú quisieres, Supuesto lo que he propuesto." Como conoció Zalma A do el principal deseo De su hijo caminaba, No quizo mas detenerlo; Antes bien con grandes muestras De amor y contentamiento, Lo bendice, abraza y besa Y luego se despidieron Della con gran reverencia,

<sup>1</sup> Esta sin duda por potentazgo siendo aqui substantivo y no adjetivo, como pudiera parecer. Es como si dijera: "al mas noble señorio," etc.

2 Cucay, P.

3 Curag, P.

Y grandes ofrecimientos, De la una y otra parte, Y su camino emprendieron. Ella se fué á Yaziriba Y ellos á Maca se fueron, Y andando por el camino Almutálib, muy contento, Dixo á su caro sobrino: "Escucha lo que te advierto, Si te preguntan quien eres Tendras tu nombre en secreto, No digas ques deudo mio, Sino dirás que es mi sierbo, Y mira que si en Yaziriba Traidores te persiguieron, No menos en esta villa Hay de la sangre de aquellos: Y en el inter que no seas Para rejir este pueblo No combiene que se entienda Tu linaje ni aun por señas." Ansi entraron por Maca Con este apercebimiento, Aunque de la luz los rayos Entraron los delanteros. Quantos á Jaiba miraban Tan hermoso, lindo y bello Que relumbraba su cara Como cristalino espejo, Preguntaban: O' Almutálib! ¿ Do traes ese mancebo? Respondió: "es mi criado, Que lo traigo de otro Reyno Para mi casa y servicio." Y dióle nombre de sierbo. Aqui se permutó el nombre De Jaiba por que creyeron Ser criado de Almutálib, Y asi por este respeto Fué llamado Abdulmutálib, Dexando el nombre primero: A quien la Ciudad amaba Y le honrraban por extremo, Que su luz los incitaba A bendecillo y querello. Con que en todas sus congojas Rogaban al Rey del cielo; Con ella pidian agua

1 Siempre, variante

En tiempos fuertes y secos, Y en todas las demas cuitas Que consigo trae el tiempo, Y siempre fueron oidos Del Señor todos sus ruegos, En nombre de aquella luz, De su patron y heredero. Estendióse su renombre, Su hermosura y grandes hechos En Maca v toda su tierra, En los de cerca y de lejos; Y como siempre los tales, Quanto mas justos y rectos, A veces tienen mas ciertos Los emulos emvidiosos, Los enemigos secretos. Que al bueno nunca<sup>1</sup> persiguen Si no un traidor y otro reo; Este los tubo continuos, Pues desde su nacimiento Le fueron buscando modos Para acabarlo y perderlo. Era en este tiempo en Maca Un hombre allegado en deudo, De este Abdulmutálib primo, Del buen Abdulmunef nieto, Hombre grave y muy altivo, A quien guardaban respeto Por su linage y riqueza, Gran regidor de consejo. Tenia á Maca á su mando, Era el todo en el gobierno, Y todos se le humillaban Y á todos tenia sujetos, Ques la imbincion grande madre De cargos y cargamientos; Y como ya Abdulmutálib Llegó á ser hombre perfecto, Casado va, con un hijo, Aunque sin la luz y herencia, Olvidaron á su primo, Como si ya fuera muerto. Ningun caso dél hacian En cosa del regimiento, Ni á su mandado atendian, Antes bien á Jaiba dieron Las llaves de la Ciudad, Y las cosas 2 del consejo,

<sup>2</sup> Variante: Y de la casa.

Los archivos y escripturas, Y el señorio del templo. Hicieronle adelantado, Caudillo y capitan de ellos. Y todos le obedecian Con grande amor y contento, De lo qual nadi ha sentido. Enojado de ver esto, Lleno de rabiosa imvidia, De ambicion y de ira emvuelto, Buscó ocasion por do asirse De razones con su deudo, Y acaso un dia lo tubo Lleno de colera, ciego,  ${f Y}$  con indignado pecho Delante de alguna gente Le dixo tales denuestos: " A donde quieres llegar, Mozo, con tus pensamientos, Y dí quien pretendes ser Que ansi desplegas al viento Tu necedad vana y triste, Sin raiz de buen cimiento? O' di por ventura piensas Que aqui no te conocemos? Aver veniste á esta villa Desnudo, pobre y mozuelo, Que estabas en Yaziriba Algaribo, y entre hebreos, Y aqui entre nos has sido Mozo de los mozos nuestros: Aqui te habemos honrrado Y te habemos dado asiento, Y tú quieres entonarte

Con tu caudal tan pequeño, Que no tienes ningun hijo Ni es hombre para tenerlo. Pues por que te ensoberbeces Con nosotros, conociendo Que no te da el Señor hijos, Solo por no merecellos." Abdulmutálib corrido De aquel decir tan soberbio, Mostrando el valor altivo Y su enojo reprimiendo, Respondió, algo turbado: Sino por el parentesco Que el Señor puso entre nos, A lo qual miro y atiendo, Yo te cruzaba esa cara, Descarado y sin respeto, Y te hiciera desdecir El blazon tan torpe y ciego, Pues por tener solo un hijo, Pudiendo tambien tenellos, Que es poner taca en mi honrra Por que solo un hijo tengo. Omenage ad Alláh hago Y ante su deidad lo ofrezco, Que si diez hijos me diese Sacrificaré uno de ellos En su alcorben 2 y holocausto, Y para confirmar esto Se fué á la casa enxalzada Y en la santa alcaba puesto, Trabado de las acitras,3 Lo dicho afirma diciendo.

#### ORACION.

Las suplicaciones justas, Como Universal Señor Que riges, gobiernas, juzgas: Tú que solo es él que sabes El conto de tus criaturas, Y de sus madres los sacas Del talle que las figuras; Tú que de tu divina esencia Las buenas nuevas relumbras,

Señor del alarx granado, Que desde su grande altura Estas mirando los hechos De la una y otra adunia,<sup>4</sup> Tú que estas en toda parte Y ningun lugar ocupas, Y donde quieren te hallan Los que demandan tu ayuda; Tú que á ti solo se deben

الغريب Estraño, peregrino, forastero: es palabra arabiga. الغريب.

<sup>2</sup> Sacrificio. القربان.

<sup>3</sup> Cortinas que rodean la Alcaba ó casa santa.

الدنيا . Mundo

Y las nocientes y adversas Cambias, truecas y mudas; Tú que sabes que me afrentan Por lo que no tengo culpa, Pues solo lo que tú quieres Se hace y es bien se cumpla; Si por lo que en mi encerraste 2 Me menosprecian é imputan, Justo será que á mis faltas Tu divina gracia supla. Señor, si me das diez hijos Que á tu santa lev acudan, Y á ti solo reverencien Como tus sierbos se aunan; Desde aqui vuelvo á ofrecerte Cumplir sin ninguna duda

Lo ofrecido á tu servicio, Sin faltar en cosa alguna." Fué la oracion tan contrita. Y su hablar tan sincero. Que su divina bondad Satifizo á su deseo: Diez hijos le dió varones, De seis madres procedieron, Todas de nobles linajes: Y el menor de todos ellos Sacó la luz escogida, A quien por nombre pusieron Abdullah, lindo v hermoso, Gallardo y de bellos miembros, A quien el Cielo bendijo, Y quien alegraba el suelo.

#### TERCERO CANTO DE LA ISTORIA DE ABDULMUTALIB.

Tanto debe ser tenida La dedicación y oferta, Quanto en provecho resulta, Si en el efecto se acierta; Que quanto en provecho sube Ante la bondad inmensa, Tanto desmerece y pierde Si dedicada la dexan. La promesa es voluntaria. Pero despues que está hecha, Poniendo al Señor por medio, Es como que la preceptan; Y derogarse de aquello, Supuesto quel tal no peca, Pierde el credito de siervo,3 Su palabra y nombre afea; Y asi es bien lo considere Quien dedica una promesa, Ques lo que hace y por quien, Antes que lo tal emprenda. No se arroje de improviso, Haga despacio su cuenta, Y ajuste lo que promete Con lo que sustentar pueda; Y hecha su resolucion, Afirmela de manera Como que á cumplir le obliga Su mas estimada prenda, Por que en las cosas deidosas

Hase de hablar siempre veras, No burlas, que no se sufren Aun en las cosas terrenas. Virtud es muy conocida El que en su salud entera Por ver las cosas divinas Al mundo los ojos cierra, Quando su libertad priva Y su voluntad refrena, Quando su gusto reprime Y su apetito sujeta. Esto es lo que mas afirman Nuestros alimes 4 y aprueban, Quanto á los divinos ojos Mas aplace v mas contenta; Pero entre las buenas obras La que escogen por mas buena Es la ofrecida, que a Dios Y á sus angeles alegra; El voto es superlatibo Que nada con el se allega: Quando la lengua lo dice Y el corazon lo cimienta, Quando para confirmalle Se junta la vehemencia, Y hacen un mismo consorcio Los sentidos y potencias; Entonces se graba en el pecho, Entonces se desapega

<sup>- 2</sup> Ordenaste. 1 Naciones.

<sup>3</sup> Es decir siervo de Dios, que le acata y obedece.

<sup>4</sup> Sabios y doctores.

Del mundo, y graciosamente Pone sobre si esta deuda. Bien es verdad que seria Mejor, que nuestra vivienda Fuese tal que no tuviese Necesidad de estas pruebas; Mas como tan quebradiza Fué nuestra naturaleza, Rompese á veces, y es bien Que se solde con la enmienda. Evitemos la ocasion Del vicio, por que con ella No se graba la oblacion, Que casi viene por fuerza. Ya que ocasion tengamos, No seamos causa de ella, Por que la causa que es justa, Es justo se salga á ella. Ocasion tuvo quien duda Que no fué grande la afrenta Que recibió Abdulmutálib, Que en la pasada contienda Grande fué sin duda alguna Quando por salir de aquella, Ofreció al Señor de un hijo La vida que tanto cuesta. Era en aquel tiempo en Maca Y en todas las demas tierras Tenido el hombre sin hijos Por hombre de baxas prendas; Y es cierto que si otra cosa Su contrario conociera Que mas afrenta le hacian, Otra peor le dixera; Por qué en tales ocasiones Suele la colera ciega Provocar palabras tales Que, á quien las dice, afrenta; Y á un hombre de tanta estima, Como Abdulmutálib era, Fué desconcierto muy grande Tratallo de tal manera, Por tomar lo que era suyo, Su patrimonio y herencia, Y aquello que le venia Por tan derecha linea. Y asi no podrá decirse Quel fué la ocasion primera, Por do despues le obligase

A satisfacion tan fiera; Pero fué mucho arrojarse, Derogó su gran prudencia; Que fué temeraria cosa · El ofrecer vida agena, Cosa incierta de cumplir; Y en caso que la cumpliera, A todos sus descendientes Daba ejemplo de crueza. Ejemplo que tanto obliga A dar ejemplarias muestras A los que para dechado Los puso Dios en la tierra; Aquellos que tras de si Los ojos del vulgo llevan, En cuyos hechos miraban Y á cuyas obras se apelan.

Ya sus diez hijos tenia De edad cumplida y entera, Padres con hijos, algunos Casados y con haciendas, Quando de verlos á todos Mas se contenta y se huelga; Y quando mayor regalo Le causaban sus presencias, Y quando mas descuidado De su pasada promesa Está, que el tiempo vario Mueve su inconstante rueda, Recordóle la memoria (Que Alláh es al fin quien remiembra Los hechos de sus amigos Por que su gloria no pierdan) Aquel alto ofrecimiento Que él hizo a la suma alteza De sacrificar un hijo, Si á los diez sus hijos llegan; Y al punto que fué acordado Con aflijida conduelma, Sin dar una ora de espacio, Que la dilacion no es buena, Antes con las cosas tales Mejor quanto mas se abrevian, Llamó á sus hijos queridos Y puestos en su presencia, A todos diez les declara Lo que el señor ofreciera.

Ellos quedaron suspensos, Que nadie mueve la lengua, Abaxadas las ciervices, Los ojos puestos en tierra: Mirabanse unos á otros, Alteranse y titubean, Que la muerte enmedio de ellos Les quajó la sangre nueva. Ninguno nada responde, Por que cada qual rezela La suerte del sacrificio, Que no es mucho que la tengan; Y al fin, rompiendo el silencio, Con cara alegre y serena, Abdullah, el menor de todos, Dió la siguiente respuesta: "Cierto, carisimo padre, Que has ofrecido una empresa Que jamas en tiempo alguno Ha sido por nadie hecha; Pero pues que ya la heciste, No hay para que mas se atienda, Mas de cumplir lo ofrecido A su divina obediencia; Y jamas Alláh permita Que entre nos haya otras señas, Que aspiren mas de á servirte En quanto mandes y quieras, Todos diez somos tus hijos, Todos damos la obediencia Al señor que nos crió, Y al padre que nos engendró; Todos somos muy contentos, Todos sus vidas entregan, Y yo por todos ofrezco Mi garganta la primera. Volvióse el padre á los otros, Por ver si lo dicho aprueban, Y todos le respondieron De aquella propia manera Diciendo; "no solo el uno, Mas si te place que mueran Todos, todos moriremos Con voluntad muy sincera." Quedó tan agradecido De la humildad y nobleza, Con que todos se ofrecian,

Sin dar muestra de flaqueza, Que mil veces les bendice, Deshecho en lagrimas tiernas; Y dixoles: "hijos mios, Pues asi quereis que sea, Y tal esfuerzo me dais, Quando la mañana sea Taharareis 1 vuestros cuerpos Y vestireis ropas nuevas, Encomendaos ad Alláh Como el que á morir se adreza; Despidios de vuestras madres Y hijos el que los tenga, Ireis al alcaba santa, Y por que nadie se ofenda, Echaros-hé á todos suertes Y el que Alláh mande, que muera. Aquel será el escogido Al sacrificio y deguella. Todos ansi lo hicieron, Y al tiempo que el alba quiebra, Se levanto Abdulmutalib Y á lo dicho se apareja: Tahara su cuerpo, y luego A su Señor se encomienda; Vistese<sup>2</sup> ropas preciadas, Reliquias de los profetas, Toma un alfanje de Alhinde<sup>3</sup> Y luego al hecho se apresta. Salió á llamar á sus hijos, Y todos con gran presteza Salieron sin detenerse, Y ante el padre se presientan. Solo Abdullah se tardaba, Aunque al salir no empereza; Si no que su madre triste Lo detiene y no le deja. Salió abrazada de él Y él por desasirse de ella, Niega aquel materno amor Que enterneciera á las piedras, Diciendo: "dexa me ir A dó mi padre me espera, No me noteis de cobarde O de alguna negligencia, Que mas me obliga aquel deudo

1 Taharar es alimpiar 6 purificar.

3 De Hind 6 Hindostan.

<sup>2</sup> Variante, viste sus.

Que quantas lagrimas echas. Dexame, que si el Señor Ordenara que yo muera, Yo mereceré la palma Questa mi alma desea, Y libraré á mis hermanos Y á mi padre de esta deuda; Y si no yo volveré Si Alláh se sirva que vuelva." En esto llegó su padre A llamarle con gran priesa, Y vuelta Fátima á el Toda en lagrimas deshecha, Y dice; donde has hallado, En qué parte ó en qué tierra, En qué escritura has leydo Que el Padre, que un hijo engendra, Lo deguelle por sus manos, Sin que nadie le haga fuerza? : Hay crueldad que se iguale, Quando de ti el mundo entienda Que degollaste tu hijo, Por un enojo siquiera! Y si acaso no se escusa De hacer esto que intentas, Toma de los nueve el uno, Y este mas pequeño dexa: Duelete de su niñez Su hermosura considera; Mira la luz de su frente Que hasta los cielos clarea; Mira que en solo su muerte Esta triste vida cuelga Y es cierto que no tendre Mas vida que la que el tenga." Respondió Abdulmutálib: "No dudes que á mi me pesa Quitalle solo un cabello De encima de su cabeza, Quanto mas dalle la muerte. Siendo de mi luz candela; Mas la ofrenda del Señor No es razon que yo la tuerza, Por su beldad y tu duelo, Ni quanto el mundo sustenta; Yo le soy mas piadoso, Yo le quiero con mas veras Que todos quantos le quieren,

Ni quantos duelos le muestran: Yo le llevaré al alcaba Y quizá en la mente eterna Será juzgado en que viva Con su piedad inmensa; Y si le diere la suerte, Habremos de obedecella, Que no hay que torzer el juicio Dél que nos manda y devieda." Esto dixo Abdulmutálib, Y luego el hijo se adreza; Despidese de su madre Y ella lo bendice y besa Diciendo tales palabras, Que hicieran llorar las piedras. O' hijo! á quien el Señor Ordenó que en mi presencia, Tu padre te degollase, Y que estos mis ojos vean Refregar tu hermosa cara En la sangre de tus venas! O' hijo, que en solo verte Remediabas mis conduclmas, Y agora me da tu vista Congoxa, pena y tristeza! Hoy se acaba mi contento, Y mi amargura comienza; Por que ya no habrá consuelo Que dentro mi pecho quepa! Hoy pierde Maca su lumbre, Hoy se escurecen sus venas, Por que en faltarles tu luz Se cubren de duras nieblas. Acompañen hoy mi lloro Quantos en ella se encierran, Y acudan á ver mi duelo Las comarcas extrangeras.1 O' hijo! que en tu rescate Mi propia vida pusiera, Si con ella se apagara Y algo de importancia fuera; Voy buscando tu remedio Entre mis flacas quimeras, Y no hallo medio humano Por donde librarte pueda. Correrán mis ojos agua, Mientras lo sufran sus telas; Y quando aquellas se rompan, Sangre les haré que viertan,

1 Variante, y riberas.

Y de hoy mas ningun descanso Quiero que conmigo sea, Pues el que hasta aqui he tenido Será mi pasion perpetua." Esto Fátima decia. Llorando con tantas veras, Como si viera á su hijo Degollado á su presencia. Abdulmutálib lloraba Comvertido en tierna cera. Que lagrimas tan ardientes No es mucho que le enternezcan. Al fin mandó á su hijo Sin buscar mas detenencia, Ni dar audiencia á mas lloros, Se salió la puerta afuera, La triste Fatima sigue Tras de ellos como la oveja, Que el tierno hijo le quitan Y con él le hacen señas. Asi llorando camina, Turbada y en agua emvuelta, Que sus haldas la acongojan En ellas mismas tropieza; Derramase en la comarca En Maca y toda su tierra La nueva, y ansi vinieron Quantos oyeron las nuevas. Llegóse tanto gentio A ver esta gran tragedia, Que en la Ciudad no cogian Su gente y la forastera. Vinieron los adevinos De aquella gente perversa, Que siempre á los de la luz Fueron armando cautelas; Por que siempre estos traidores Tenian cierta sospecha, Que el Patron de aquesta luz Acabaria sus sectas, Y mas que en sus relicarios Estos malditos profetas, Tenian una camisa Que fué con la sangre emvuelta Del justo Yahiye, y decian Sus escripturas y letras, Que al tiempo que aquella aljuba Gotease sangre espesa, Se acercaba la venida

De la espada de su guerra. Y como nació Abdullahi, Vieron patentes las señas, Que á toda prisa la sangre De la tunica gotea, Y por aqui conocieron Que su perdicion se allega. Y á esta causa juntaron En las ciudades y aldeas Los barraganes mas fuertes, Dandoles orden expresa Que matasen á Abdullahi Por donde quiera que puedan. Asi llegaron á Maca, Con la codicia sedienta De haberlo puesto en la lista De la ofrecida deguella; Y por si acaso la suerte Daba á su gusto la vuelta, Se ofrecieron grandes dones, Grandes joyas y preseas. Llegó, pues, Abdulmutálib A la casa reverenda, Y sus diez hijos delante, Y las suertes luego ordenan, Segun entonces se usaban, Y al sortero las entregan. Dióle tambien sus diez hijos, Y luego en el alcaba entran Dos mancebos, y el sortero, Quedando el padre defuera Con el alfange en la mano Que al delgado filo tiembla; Que alterado al fin era-De esta compostura humana, Fundada en tantas flaquezas. Y antes que las suertes echase A las acitras se allega, Y asido dellas rogaba Ad Allah, que en su deguella Reciba con la aficion Que lo hace y lo desea. Rogó tambien que Abdullahi Libre de la muerte sea, Y que la suerte cayese Sobre los otros que quedan; Por que este solo cuidado Era el que mas le apreta, Por que mas á este amaba

1 San Juan Bautista.

Que si tuviera cincueinta. Acabada su oracion. Luego las acitras dexa, Diciendo al sortero que eche Las suertes y no se detenga. Estaba este justo entonces Puesto en publica almoneda, Tanto mirado de todos Y con tanta deferencia. Estaba todo el gentio En torno de la ancha puerta, Aguardando que saliese El que la suerte condena: Alli estaban sus amigos, (Sus parientes alli eran) Sus emulos y contrarios, Que lo persiguen y aquexan: Los unos se compadecen De su trabajo y conduelma, Que el bueno tiene de ser Como el suyo, es bien lo sienta: Otros quisieran mas verle En miserias mas estrechas, Quel malo mas mal concibe Que el que por defuera muestra. Los unos al padre llaman, Los otros mal le desean; Los unos al hijo aman, Los otros ya le condenan. De esta manera la turba De la gente estaba puesta, Condicion del vulgo vario Que nunca lo bueno aprueba. Las tristes madres presentes, Que cada qual teme y piensa Dar á su hijo tal suerte, Y esto la turba inquieta; Sus blandas manos torcian, Gimen de cuidado y tiemblan Por aquel trago que aguardan Entre congoxa y tristeza. Asi de esta suerte estaban, Mirando la santa puerta, Tantos ojos sin moverse Las pestañas y las cejas; Unos por cima de otros Se levantan y enderezan, Sobre las puntas se empinan, Se alargan y el cuello infiestan;1 2 Esta por "desatina." 1 Alargan, levantan.

Quando la puerta se abre, Y vieron salir por ella Al sortero y tras de si Al buen Abdullahi lleva: Una toca al blanco cuello Dada por él una vuelta, Sin luz su cara amarilla, Temblando sus carnes bellas; Y tras dél sus nueve hermanos Llorando, y por él vocean El sentimiento excesivo, Como si en ello se vieran. Quando lo vio Abdulmutálib, Vino á dar consigo en tierra, Si no quel animo fuerte De su prosapia lo esfuerza. Alzó la gente un ruido, Gimen, suspiran, lamentan, Viendo el mas gallardo mozo, Que crió naturaleza, El cuchillo á la garganta, En la edad mas tierna y bella. Que diremos de su madre, Quando su cierta sospecha Vió patente y á la clara Averiguada y derecha! Considerento las madres Que una llaga muy pequeña De sus hijos las destina,2 Las aflije é impacienta! Qué hará la que lo mira Como al toro en la trinchea?3 Esta tenia otro hijo, Mancebo de grande cuenta, Hermano de padre y madre Dél que está en la deguella: Abutálib se llamaba El qual con cara serena, Incitado y conmovido De aquella bondad inmensa, Que de sus antecesores Tiene por linea reta Ante su padre se humilla, Y dice que le conceda La rogaria que al señor Quiere hacer en la defensa De la vida de su hermano, Poniendo la suya en trueca. "No osaré, dixo su padre, <sup>3</sup> Trinchera. "Hacer otra en contra de esta, Que al Señor no ha de volverse. Su servicio y obidiencia." "Pues para que en nada faltes, Replico Abutálib, echa La suerte segunda vez; Veremos si a mi endereza, Que yo rogaré al Señor, Que esta mi rogaria aceta Sea de su gran bondad, Que al fin oye á quien le ruega." Y diciendo estas palabras, En el *alcaba* se entra, Y asido le las *acitras*, Implora de esta manera:

#### ORACION DE ABUTALIB.

"; O Señor de las naciones Que tus secretos criaste. Donador de las mercedes. Formador de los alarjes! Has juzgado sobre nos Aquello que á ti te place, De lo qual somos contentos Nosotros y nuestro padre. Que prometió una promesa Harto fuerte y harto grave, Pues ofreció nuestras vidas Antes que nos engendrase. Cumplistele su codicia En lo que fué á demandarte, Y aora viene á cumplir Lo que ofreció consagrarte. Echónos á todos suertes Por que ninguno se agravie, Y ha caido al mas tenido Como tú, Señor, bien sabes: Es luz de nuestro contento, Consuelo de nuestros males: Claredad de nuestros ojos, Espejo de su linaje. Señor, si eres servido, En mi alcorben apagarte, Y libertar á mi hermano De la suerte que le cabe; Y digo que muy contento, Si tu quieres acetarme, Por redimir a mi hermano Daré mi vida en rescate; Y por piadad que del tengo, Por el amor entrañable Trueco mi aroh 2 por el suyo, Y su sangre por mi sangre.

Señor, redime á mi hermano, Habe piedad de su madre, Y aceta mi peticion, Pues ya mi designio sabes." Y dejando las acitras, A su padre dice y ruega, Que en su garganta ejecute El debito de su oferta. Y para desengañarle La segunda suerte echan. Y dieron sobre Abdullahi. Como la suerte primera. "Juzgado está ya este hecho: No hay buscar otras arengas, Sino cumplir lo juzgado Por su santa providencia;" Y tomando al justo hijo Con muy grande diligencia, Le puso en aquel lugar, Digno de tal adahea.3 El mancebo, que ya estaba Sin luz su cara tan bella, Esforzaba á su buen padre Diciendo: "padre, no temas; Ata mis pies y mis manos Con fuerza ligera y presta, Que al tiempo de hacer el hecho No te embarace ni enpeza; Y si quando el crudo hilo Atravesara mis venas Te movieres á piedad, Apreta y los ojos cierra, Apresurando el cuchillo Para que no te enternezcas. Desnudate de piadad. Y de paciencia te arriedra,

<sup>1</sup> Plural de alarz que significa el trono de la magestad divina.

<sup>2 79</sup> alma.

<sup>3</sup> Victima sacrificatoria.

Que obedeciendo al señor, Harto consuelo te queda: Yo soy contento y gozoso, De que en edad tan pequeña, El señor con mi se apague Y sea bastante prenda Para redemir la causa De dó tu congoja cuelga. Adviertote que desvies Tus ropas, por que no sean Goteadas de mi sangre, Que te causará tristeza; Y por que no se apasione Mi madre quando los vea, Y á ti en algo te culpe Si fundara justa quexa; Consolarla-as, padre amado, En su llanto y en mi ausencia, Que al fin es madre piadosa, Femenil de entrañas tiernas. Alláh sea en vuestro consuelo Y esparcie vuestra conduelma, Y concluye el mandamiento Y tu alcorben delibera. Al tiempo que el tierno joven Inclinó el cuello y cabeza, Despidió su hermosa frente Rayos que á los cielos llegan De aquella luz relumbrante Que entrerompe las esferas. De las celestiales cortes Hasta la esfera setena, De donde los almalaques Aquellos quel alarx llevan Daban vozes de humildanza. Al señor de la nobleza, Diciendo: "Señor piadoso, Habe piedad y clemencia De estos justos, pues bien sabes Sus entrañas tan sinceras." Dijo Alláh: "todo lo veo; Todo pasa en mi presencia; Soi tarduo, no me apresuro, Ni hay cosa que me somueba, Yo reprobaré á mis siervos El muelle de su firmeza, Y libraré á quien me llama Y á quantos de mi se acuerdan." Quando va Fátima vido La luz de sus ojos puesta Al agudo y cruel cuchillo, Sin remedio su dolencia; En tanto que Abdulmutálib Apreta las duras cuerdas En los delicados miembros Y al efecto se apareja, Sale denmedio la gente Que mas no aguarda ni espera, Como la leona brava Quando á su hijo le agenan; O' como la vaca fiera Que le quitan la becerra; Gime, rabia y se lastima Brama, apellida y vozea, De calle en calle corriendo, Llamando de puerta en puerta, Que vengan á socorelle Y de su hijo¹ se duelan, Y que á su hijo rescaten Por armas ó como puedan. Eran tantos los clamores Y los alaridos que echa, Que toda Maca retumba, Sus calles plazas y vegas; De cuyo dolor movidos Los hombres que estan en ella, Digo los de su prosapia, De su casa y parentela, Y los demas que en tal caso De gente noble se precian, Acudieron con gran furia Y aquel tumulto atropellan Con las espadas desnudas Haciendo ancha carrera. Llegaron á Abdulmutálib, Al mesmo punto que afierra El cuchillo á la garganta Y el sacrificio acelera; Y con un pecho furioso Y con denostanza honesta, Le quitaron el cuchillo Que tiene en la mano diestra, Reprendiendole su intento, Diciendole: "ten verguenza De matalle á esta muger Su hijo á fuerza violenta, Sin darte ocasion ninguna.

1 Variante, duelo.

¡ Hay semejante crueza! Asi pués tener por cierto Que antes que en tus manos veas Ese cuchillo tenido En esa sangre inocente, Que todos los que aqui vienen Moriran en su defensa; Y no habemos de permitir Esa crueldad que intentas." Dixóles Abdulmutálib "Por que quereis que yo tuerza El juzgo de mi Señor, Y que le desobedezca? Señor! juzga entre mi y estos Este caso, que me fuerzan Y me impiden el servicio Que debo á tu gran nobleza." Ellos estando en aquesto, Quando oyeron que de fuera Venia un hombre gritando Señando que se detengan Quel dará la traza y modo Por dó cese su contienda. Asi se sosegó el ruido Y al punto que el hombre llega, Mirando á Abdulmutálib, Le dice de esta manera: "Tú eres caudillo de Maca Y regidor de sus vegas, Y el mayor adelantado; Todo por ti se gobierna, Y podrá ser que algun dia, Si ese tu hijo deguellas, Algunos te vituperen Y te culpen y repreendan, Por que querran imitarte Los que despues de ti vengan, En sacrificar sus hijos Pues esto tú les enseñas: Cosa que sobre los Reyes

Há de parecer muy fea, Y esto sera á cargo tuyo. Si acaso en culparte yerran, No dudes, Abdulmutálib, Que un hombre de tantas prendas Como tú, dar mal ejemplo Mal parece y muy mal suena." Respondióle Abdulmutálib, Será bien que desfallezca La ofrenda del que me ha hechó Por quanto en el mundo se encierra? Respondió el buen Ygrama, Que asi su propio nombre era. "Yo te daré buena traza, Si quieres valerte de ella: Aqui en tierras de Alchihes,1 De nuestra comarca cerca, Vive una muger muy docta Que á semejantes querellas Da muy bastantes remedios Y aplaca muchas conductmas. Vamos allá, si tu quieres, Que tengo por cosa cierta Quemos de tener remedio De lo que tanto te aquexa." A todos pareció bien Lo que Yqrama² aconseja, Y parando el sacrificio. Determinó de hacer pruebas Si por ventura habrá medio, Sin que al deudo contravenga, Para librar á su hijo; Y asi su jornada ordena, Adó estaba la muger, Que siempre él que está en tinie-Confia que ha de salir Do vea la luz Febea.

#### QUARTO CANTO DE LA YSTORIA DE ABDULMUTALIB.

¡ O' llaga corrupta y fiera, Ynfernal tosigo amargo, Cancer que acabas las vidas, Sin valer de medio humano, Embidia que á tantos buenos Consumes y das el cabo: A quantos nobles abajas Y enzalzas á tantos malos! ¿ Que hiciste del justo Hébil?³ Y si mas atras tornamos, ¿ Quien destronizó á su padre De aquel sumo potentado?

<sup>&</sup>lt;sup>1</sup> Hechaz ó Hechez, province de Arabia.

<sup>&</sup>lt;sup>2</sup> Yquerama, P. <sup>3</sup> Abel

¿ Quien á Jacub dió tristeza? Quien á Yuçuf hizo esclavo. Quien lo puso en la cisterna? Quien á Daniel en el lago? Quien á David en destierro. En vez de ponerle un lauro, Y? quien le abrevió su curso Al gran monarca Alexandro? ¿Quien al mancebo Abdullahi Tiene puesto en tal estado El cuchillo á la garganta Y atado de pies y manos? Quien al buen Abdulmutálib Hace andar peregrinando, Buscando para sus males Algun consuelo ó reparo: Inquieto, afligido y triste, Sus deudos con tal cuidado: Unos culpando su ofensa, Otros su intento culpando; Puesta Maca en competencia, Si fué bien ó mal mirado? i O' quanto mal sufre un bueno Y quanto mal hace un malo!

Quando fué el tercero dia Del sacrificio contado, Que no le dió mas lugar Aquel profundo cuidado, Parte el buen Abdulmutálib, A do le fué aconsejado Por el valiente 1 Yqrama, Varon insigne y muy sabio, Con ochenta caballeros Que le van acompañando, Nobles de nobles linages, Deudos suyos muy cercanos, Que á todos les da la pena De su caudillo el trabajo, Y la muerte de su hijo Les causa mayor quebranto. El qual dexaron en Maca, Que no quisieron llevarlo. Acabada su jornada, Quando á la muger llegaron, Despues de muchas saludes<sup>2</sup> Y joyas que presentaron, Con grandisimas caricias Que cada qual por su cabo 1 Prudente, P.

Le ofrecia largamente, Si por ventura ó acaso Les daba buena esperanza De aquello que van buscando: Ella con muy grande amor Los recibe y dice: "hermanos. Holgad de vuestra venida, Que si querrá el soberano, Mañana os daré soltura De lo que me habeis preguntado." Pasaron toda la noche, El claro dia aguardando, Y quando fué la mañana, Despues que la saludaron, Les dixo: "noble compaña, Señores de alto estado, Moradores en la casa Del perdon asegurado: Volved en paz y contentos, Siempre en Alláh confiados, Que os ha de dar de sallida De su piadosisima mano, Y para que el sacrificio En nada quede menguado. Tomareis muchos camellos Y en el lugar señalado Los pondreis, que estén presentes Con el mozo señalado; Y echad sobre los diez de ellos La suerte, y en entretanto Que caiga sobre el mancebo De diez en diez, yd juntando La suma de los camellos, Y siempre la suerte echando, Hasta que sobre ellos caiga Y tomareis todos quantos La suerte lleve y comprenda, Y en alcorben degollaldos: Que con su sangre de aquellos Será el Señor apagado." Con esto se despidieron Della, y á Maca tornaron Contentisimos y alegres, Y algunos se adelantaron A demandar las albricias A Fatima, del espacio Quen la deguella traian, De que todos se alegraron. Quando llegó Abdulmutálib

2 Variante, promesas.

Y los que le acompañaron. Saliólos á recibir Abdullah v sus nueve hermanos. Y dixo: " en el alma siento Este afan que te has tomado, Que yo muy contento fuera Que cumplieras lo mandado; Empero hazme á saber, Si por ventura has hallado Descanso á tu afligimiento, Questo es lo que yo mas amo." Dixole su padre entonces, Tomandole entre sus brazos: Besandolo entre sus ojos: "O' hijo y dulce regalo, He hallado confianza Para cumplir mi holocausto; Quizá sin el daño tuyo, Aunque á costa de mis algos, Que aunque todos se atreviesen Pensaré comprar barato, Lo qual probaré mañana, Quando el pueblo esté juntado Ante tu misma presencia Con licencia del Rev alto," "A todo estaré obidiente, Quanto sea tu mandado, Ordenalo como quieras, Respondio el mancebo honrrado. A esto llegó su madre, Que aun de llorar no ha cesado, Abarrancada su cara, Sus ojos apestañados, Diciendo: "Abdulmutálib No repares en los algos, Que yo y mi madre tenemos Mil camellos aprestados En rescate de mi hijo: Todos puedes degollarlos, Y si mas querrá el señor, Daremos de los ganados, Carneros, vacas y ovejas, Los que fueren necesarios; Y si mas questo pidieren, Yo daré de muy buen grado A todos los alhijantes 1 Mesa franca en ancho y largo; Y si de esto no se paga, Nuestro tesoro te damos,

Axoreas de plata v oro. Lo por labrar y labrado: Y si todo esto no basta. Mis parientes me han mandado Que pondran en su remedio Camellos y oro guardado: Y si no fueren bastantes Iré à los Reynos extraños En Aliaman y Axem, Y á los Perlados romanos. Y trastornaré este mundo A la una y otra mano; Y si todo será poco Y no podré contentarlo Sin la vida de mi hijo, Sea por siempre loado: Cumplase su voluntad A cuyo juzgo me llamo. Y á cuyas obras me apelo." Respondióle Abdulmutálib: "Por cierto que me holgado De tu grande ofrecimiento; Empero estoy confiado Seran mis algos bastantes, Sin echar del tuvo mano." Mandó luego á sus pastores Que todos quantos rabaños De ganado apacentaban En las montañas y llanos, Camellos, cabras y vacas Traigan al punto asignado; Y él tomó luego su alfanje, Las cuerdas y el aparato, Su hijo delante dél Y en llegando ad aquel patio, Que há de ser Allah servido, Todo el pueblo congregado Y los camellos presentes, Grande copia de ganados, Tomó al humilde mancebo Y con un valor sobrado Lo tendió sobre la tierra, Atado de pies y manos, Y hizo atar diez camellos Tras de su hijo amanados, Y él se entró en el alcaba Y las acitras trabando, En altas voces decia A su Criador llamando:

"Señor, lo que á ti se ofrece Es debito preceptado, Y tu juicio es derecho Que se ha de cumplir forzado: No hay salir de tu reismo, Tuyos somos y á tí vamos. Señor, el siervo es tu siervo Y el algo es tambien tu algo, Si el siervo quies, elo aqui Humilde y aparejado; Si con el algo te apagas, Tu voluntad solo aguardo." Y mandó lanzar las suertes, Como habian comenzado, Y sobre Abdulláh salieron Y luego al momento ataron Diez camellos con los otros, Y otra vez la suerte echaron; Y salió sobre Abdullahi Y con los veinte juntaron Otros diez que fueron treinta, Y las suertes continuando, Salieron sobre el mancebo, Y sin poner mas espacio, Fueron otros diez camellos Con los treinta señalados; Y siempre la dura suerte Seguia su acostumbrado, Asi mismo los cinquenta Y todos quantos echaron Hasta llegar á noventa; Y el buen mancebo, aunque atado Estaba sobre la tierra, Dió vozes algo enojado Diciendo: "hasta do pretendes Rellebar¹ el tiempo en vano, Echar al ayre las suertes Que yo estoy avergonzado De ver que á contra derecho Trocas lo que tu has mandado. Veo mi obra menguada Y mi lugar abiltado, Desfalleces mi servicio, Y ha de ser menos preciado, Que no pertenece al siervo Ser remiso ni arrimado, Que el señor quiera una cosa Y él porfia lo contrario; Y pues ya vez claramente

Tan patente el desengaño, Allegate á mi, si quieres; Acaba lo comenzado, Y cumple el apagamiento Del Señor que está á tu cargo."

Aqui cayó gran bullicio, Grande lloro y grande llanto, En todó aquel gran contorno Quando oyeron lo hablado; Dixo el buen Abdulmutálib En su intincion afirmando, Siempre él que á una puerta

llama Confia ser apiadado; Allegando los camellos Al numero centenario, Alzando al cielo su cara Dixo, "Señor soberano, Rey de la casa ensalzada, Ordenador de los plazos, La redemision recibe Por tu piadoso amparo; Por la gracia de esta luz Con que nos has ilustrado, Criada ante que criaste Los espiritus humanos, Corriendo por los varones Mas limpios y mas honrrados, Hasta que nos la entregaste Por tu saber encumbrado, Por cuyo prez y homenage Pido tu divino amparo." Y dichas estas palabras, Siempre al Señor invocando, Mandó al sortero que echase Las suertes con gran cuidado; Y toda la demas gente, Digo los de pecho sano, Rogaban á su Hacedor Se contente y sea pagado. Y Alláh el poderoso inmenso Que á sus siervos mas amados Por su saber los estrecha Hasta el mas estrecho paso, Siempre por su beneficio Y para que su dechado Exemple los deste suelo, Que ya su piadosa mano

1 Gastar.

Los crió de tal pegaja,1 Tan perfectos y afinados, Que á todas las tentaciones Tienen ya su yugo echadas; Y como ya el Señor sabe Sus pechos tan acendrados, Y que por ninguna fuerza Tienen de ser denunciados, Alumbra á los hijos de Edam Con la luz de sus trabajos, Considerando que fueron Hombres los que les pasaron Que jamas á nadi apreta El Señor en ningun caso De lo que la suficencia De que lo tiene dotado. Asi fué con estos justos Que estaban determinados De cumplir su ofrecimiento, Y vinoles el espacio De la mano poderosa, Quando ellos menos cuydaron Cae sobre los camellos La suerte que alegró á tantos: Y de dentro del alcaba Salió una voz sonorando, Que jamas en este suelo Otra mejor no ha sonado Diciendo: "ya es recibida La redemision en pago De la ofrenda á mi debida, Ya es el tiempo allegado Que salga y alegre al mundo Muhamad el deseado." En diciendo esto la voz, Aparecieron los rayos, De la luz esclarecida, Tan relumbrante y claro De la frente de Abdullahi Que cielo y tierra alumbraron. Quien podrá significar El contento tan sobrado, Las alabanzas sin cuento De toda la gente, quando Vieron declinar la suerte A lo que todos codiciaron?  $\mathbf Y$  quando la voz oyeron Con tanto gusto y regalo; Unos tiran con gran prisa,

Corriendo y antecuitados A desatar al mancebo; Otros muy apresurados A degollar los camellos Que estaban aparejados: Unos á otros se encuentran De muy alegres turbados. Dixoles Abdulmutálib: "Poco á poco, sosegaos, Que por ventura el sortero En la suerte se ha engañado, Que habiendo dado diez veces Sobre mi hijo á una mano, No será bien que una tuerza Lo que diez han afirmado: Volvamos á echar las suertes Que si del cielo es mandado. Aunque ciento las echemos, Que tuerza será excusado. Conocieron su razon Y al punto se sosegaron, Y aquella vez y otras dos. Por que llegaron á quatro, Dieron sobre los camellos: Y en siendo certificados Que va de su ofrecimiento Era el Señor apagado; Aunque quiso echar mas suertes La gente no le dejaron: Levantaron al mancebo, Paciente, humilde y honrrado, Y á desatar sus liganzas Corrieron sus nueve hermanos. Tomólo su amada madre Con muchos besos y abrazos, Dando al Señor loaciones Por que se lo hubo librado; Y no quedó hombre ninguno De quantos alli se hallaron, Ni muger en toda Maca Que todas no le abrazaron, Y llevandole á su casa, Dixo su padre: "dexaldo, Que quiero que esté presente Al hecho redemisario, Y alli, en su misma presencia, Sin mas punto dilatallo Acotaron cien camellos, Y siendo despedazados,

<sup>1</sup> Variante, figura.

Mandó que se repartiesen A todos en igual grado, A ricos y principales, A los parientes y estraños, A pobres y á pasajeros, Peregrinos y acuitados. Y las aves y animales Todas sus carnes gustaron; Despues fueron á su casa Contentos y descansados, Alabando á su señor Que los libró del quebranto.

HISTORIA DE ABDULLAHI, HIJO DE ABDULMUTALIB Y DEL DISCURSO DE LA LUZ DE MUHAMAD SALAM TRATA LOS HECHOS DE ABDULLAHI PADRE DEL ANNABI ALEHISALEM HASTA SU MUERTE: CON-TIENE DOS CANTOS.

Cosa comun es del mundo, Y por muchos aprobada Ser á los malos ponzoña Lo que los justos alaban; Y todo lo que abominan Los buenos huyen y apartan, Aquello buscan los malos Y lo veneran y acatan; De suerte que lo que alegra Unas sinceras entrañas, Esto á los málos consume, Los entristece y enfada, Como en la ocasion presente Se muestra muy á la clara. Los malditos adevinos De aquella gente judaica, Viendo libre de la muerte, A quien ellos deseaban Que fuese muerto, y perdida Aquella luz de su cara; Y viendo que no salia La suerte que ellos aguardan, Llenos de rabiosa yra Se abrasaron sus entrañas, Buscando malditos medios Incitados de la zaña. El almalaque maldito, Que siempre les acompaña, Hicieron junta entre todos Y dieron orden y traza De matar á Abdullahi, Aunque les cueste muy cara. Y viendo el grande contento Que á la sazon celebraban Todos los de Abdulmutálib, La fiesta y las alabanzas;

Al tiempo que todos juntos Los hijos y el padre estaban, Tan colmados de alegria Por la tristeza pasada, Embianles un presente, Una engañosa vianda, Muy hermosa al parecer, Muy cubierta y almizcada. Llevaronla unas mugeres Compuestas, bien arreadas, Cubiertas con blancos velos El rostro y todas las caras, Y con grande reverencia, Con muestras de gran crianza, Dixeron: "sabed que somos De vuestro linaje y casta, Y de los grandes comvites Que hicimos por vuestra causa, Del contento recibido, De vuestra buena libranza, Nos pareció daros parte De las mas aventajadas Viandas, que habemos hecho En todas nuestras liadas." 1 Ellos les agradecieron La voluntad cortesana, Y admitieron el presente, Y sin hablar mas palabra Se volvieron las mugeres, Que mas mercedes no aguardan. Descubrieron el presente De la corrupta substancia, Donde pareció tan rica Quanto dentro emponzoñada: Y luego el padre y los hijos Todos las manos alargan,

<sup>1</sup> Excursion campestre.

A principiar la comida, Llenos de tanta ignorancia. Este fué el primer misterio Que tuvieron testiguanza, De los señales famosos Del gran caudillo Muhamad; Y fué que el presente mismo Les dixo con voz alta y clara: "No comais de mi, escogidos, Volved las manos a zaga; Mirad que en mi confection Vuestra muerte esta mezclada." Ansi fueron todos libres, Dando al Señor muchas gracias Que los libró del engaño De aquella gente malvada; Y como cayó en vacio Esta cautelosa traza, Volvieron á juntarse, Buscando nuevas marañas: Que los que el Ebliz gobierna, Ni se enverguenzan, ni cansan; Y juntos todos los sabios De aquella creencia falsa, Fueron al mayor de todos Al quellos daban mas fama, Y como los vió venir, Dabanle la bien llegada; Y despues de saludarse Con la cerimonia usada, Le dicen: "ya, Señor, sabes Quen nuestra escriptura se halla Que ha de ser este mancebo, O' aquel que tras de este nasca, Vertidor de nuestra sangre, Sacador de nuestras tachas: Rayo de nuestras congojas, Principio de nuestras ansias. Por tanto, sabio famoso, Venimos á que nos hagas Saber, como amataremos Este fuego, antes que arda." Dixoles el sabio viejo: "Sabed, que cierto os engaña El que pretende estorbar Aquello que el Señor manda, Por que al fin se ha de cumplir: No hay á su querer ampara, No hay buscar inpidimentos.

Que no hay á su ser mudanza Al hecho de su caudillo. Tened por cosa muy llana, Que ha de ser sin faltar punto, Como su luz lo señala: Fué su nombre adelantado Por la soberana gracia Ordenado ante abinicio Sobre la nacion humana. Será, Señor, en su tiempo Patron de las ybantajas, Confundidor de los ydolos, Vencedor de las batallas; Confundirá vuestros sabios, Desbaratara sus trazas, Segun que lo profetizan Nuestras escripturas sacras. Este tendra un compañero De su mismo tribu y raza, Primo hermano carnal suyo, Cuya valentia sobrada Hará temblar á los Reyes De toda nuestra comarca. Este será su avudante, Su caballero y su guardia; Llevador de su estandarte, Con seña insigne y alta: Invencible y vencedor, A quien rendiran las armas Todos quantos le conozcan; Por tanto, gente engañada, Dexad esas pretenciones, Torpes, inciertas y vanas; Que ya no hallo camino Que a vuestro provecho salga." Quando overon las razones Quel sabio les denunciaba, Quedaron muy espantados: Todos se turban y pasman, Pirdiendo ya los estribos De su vana confianza, Que es la verdad gran cuchillo Con que los males se atajan. Y dexando el viejo aparte, Ellos por si se juntaban Para ver qué orden darian En su confusion tan brava. Dixo el mayoral de todos Que se llamaba Huibata; 1

"Este viejo ya caduca, No dice verdad en nada; Y ansi lo que me parece, Aunque mas nos desengaña, Es que si el arbol cortamos No floreceran sus ramas. Si el hijo de Abdulmutálib, Que tan tenido es en Maca Matamos, es cierta cosa Que su luz sera tallada Y no nacerá su hijo, Que tanto nos amenaza." A todos les pareció bien Lo que les aconsejaba, Dandole gracias por ello: A su parecer se allanan. Dixo mas: "pues si os parece, Tome cada qual su espada; Y abrevela de ponzoña, Y dadme vuestras palabras Que hareis mi mandamiento En quanto yo diga y haga, Que yo os lo daré en las manos Y vengareis vuestras sañas." Todos ansi lo ofrecieron, Y un dia acaso lo aguardan. Que en su caballo salia Solo con su arco á caza. Ellos salieron tras dél Con acemilas cargadas, Como que iban de camino Por la parte que él cazaba. Llevaban con el requaje Mucha gente en retaguardia, Y todos apercebidos A las señas que se hagan, Por qualquiera de las partes. Todos con sus fuertes armas Debajo de sus manteos, Cubiertas y acauteladas, Con esta orden marcharon; Y como al monte llegaban Repartense en dos quadrillas: Los unos en emboscadas, Y los otros monteando, Poniendose en atalayas; Y al tiempo que el buen mancebo En un hondo valle entraba. Corriendo tras de una corza; Quando despues de alcanzada,

De su caballo se apea, Le salieron á la cara Con grita y gran voceria: Muera, muera! apellidaban. El valeroso annebi Que vio la fiera canalla, Conoció á lo que venian, Segun ellos publicaban En aquella tierra angosta, Quebradiza, infiesta y aspera; Y ansi dejó su caballo Y á pie vuelve y hace cara, Tomando el arco en las manos; Y á la una y otra banda Despide apriesa saetas Y á los quatro de ellos mata. De lo qual se acobardaron Y con humildes palabras, Dixo Haibuba! o mancebo! Por qué, di, tan mal nos tratas? Sin saber á qué venimos,  ${f Y}$  sin mas consideranza Nos matas como á enemigos Y no te debemos nada? "Pues; quien sois vosotros, dijó, Que con espadas sacadas Contra mi corriendo aprisa, Venis con tanta algazara." Dixeron? "no nos conoces Que de la nacion hebraica Somos mercaderes ricos Y sabe que esta mañana Se nos ha huido un cautibo Con muchas joyas preciadas: Habemos salido á buscarle Y como en estas montañas Te habemos visto, pensamos Ser nuestro esclavo sin falta; Mas quando te conocimos, Hicimos punta y parada. Perdonanos nuestros yerros, Que en nuestra parte fianza Te hacemos las quatro vidas, Que has quitado con tus xaras; Todo te lo perdonamos, Como si no fuera nada, Por que por amor de ti Todas son bien empleadas." Respondióles Abdullahi, Movido de enojo y zaña:

: Malditos seais de Allah Sobre la que os tiene dada! Qué señas visteis en mi Qué talle ó qué semejanza, De que fuese vuestro esclavo? "Por ventura vino á caza, Salió á caballo huyendo? ¿ Decid: qué señas llevaba." Dixeron, ha nos turbado Esa claror de tu cara, Perdonanos; ó mancebo! Y de esta nuestra ignorancia No le deis parte á tu madre, Pues nos pesa en las entrañas. Vuelvete en paz y seguro, Salvo y honrrado á tu casa, Que nos te acompañaremos, Si quies te acompañen, mandas." Satisfizose Abdullahi De aquellas falsas palabras: Cabalgando en su caballo, Toma la via de Maca, Y los judios con él, Qual si fueran de su guardia. Ya que fué en el estrecho A donde las dos montañas Vienen á cerrar el valle, Corriendo las dos compañas De los ocultos Judios Que estaban en la emboscada, Y tomanle la salida Frente a frente y cara á cara: La otra en que iba Haibuba Acude por las espaldas, Y llamando á los cautivos Que las acemilas guardan, Vinieron todos corriendo Con sus espadas y lanzas; Y viendo el buen anabi Aquella traicion tan brava, Quizo jugar el caballo; Mas luego de una lanzada Le barrenaron el vientre, Y él que en la tierrá se hallá Subese la cuesta arriba Y enmedio la cuesta para, Jugando el arco y las flechas Furiosas y apresuradas; Y quantas xaras emvia Tantas vidas arrebata,

Rodando los cuerpos muertos Sin las infernales almas. Mientras duraron las flechas Furiosas y apresuradas, Y luego en siendo acabadas, En falta de las saetas Peñascos terribles lanza. Y nunca despidió peña Que no vomitase un alma. Hasta que ya amontonados Muertos sobre muertos daban. Al fin se vió en grande aprieto, Aunque tanto se esforzaba. Sin punto de cobardia La batalla sustentaba: Que á librarle con la vida No bastaba fuerza humana, Estando en todo este aprieto, Un gran ruido sonaba. De gente que parecian Que entre los avres volaban; Los hombres medio desnudos Sin sayos, calzas, ni capas; Llenos de sudor y polvo, Qual nubes que rayos lanzan. Llegaron echando fuego Los barraganes de Maca, Los hijos de Abdulmunef, Los de Alabes v de Hamza: Los hermanos de Abdullahi Con otra gente esforzada, Amigos y valedores De la esclarecida casta. Fué la causa de este aviso Que en el instante que estaba El anabi en mas aprieto, Segun Alhasan señala, Se acerto á oir las vozes Que aquellos traidores daban. Guahab, noble caballero, Tio del buen Jaibacanas, Hermano del fuerte Héxim; Y como vió que escusada Era su ayuda, temió Sin osar decir palabra; Mas picando su caballo Dió de presto la embajada, Y en el punto que llegaron Al lugar do peleaban, Se rindieron los Judios

Y les quitaron las armas; Y no quisieron matarlos Por que jamas se preciaban De matar ningun Judio En el campo ni en batalla. Y asi sobre sus camellos De pies y manos los atan, Y en Maca los entraron Y en las calles por do pasan, Las mugeres y muchachos Les apedrean las caras. Al fin los aprisionaron Dentro de la mesma casa, De Guahab, aquel que fué A dar el aviso á Maca. Quisieron remunerarle, Dandole esta honrra en paga, Bien atados y amarrados Como su maldad demanda. Este tenia una hija, Muy hermosa, noble y casta, Dotada de perficiones Que Emina se llamaba, Y Alláh que nunca se olvida De quien le sirve y alaba, Le puso en los corazones Para que mas satisfaga A Guahab su buen intento, Pues sus prendas tanto alcanzan, Casen al buen Abdullahi

Con esta donzella honrrada. Asi se puso por obra, Y estando en la propia casa, Tratando del casamiento Ovó una grande algazara; Acudieron al ruido Para ver quien es la causa, Y hallaron los Judios, Tirando piedras pesadas, Todos libres, desatados De los lazos y ligarzas, Por derribar las paredes, Por donde Abdullahi estaba, Pretendiendo ansi matarle, Pues ellos no se excusaban De morir todos á una; Y ansi con furia indignada Rompieron las ataduras Y el aposento cercaban, Donde está su enemigo; Mas como que se engañaban Que con la fuerza que tiran Las mismas piedras tornaban, Y en vez de dar al contrario Ellos mesmos se mataban. Asi fueron todos muertos Por sus manos y pedradas, Sin que ninguno les diese Herida ni cuchillada.

# SEGUNDO CANTO DE LA YSTORIA DE ABDULLAHI.

Despues que los adevinos Y todos sus avudantes Se mataron ellos mismos, Sin que nadie los matase: Justicia del cauteloso, Que al fin temprano ó tarde Permite Dios que el traidor Su misma traicion lo mate: Asi sucedio á Aman Con sus pribanzas tan grandes, Y los mismos que a Daniel Quisieron al lago echarle. Estos traidores lo afirman Que en tan disolutos trances, Despues de tantas traiciones No quisieron castigarles, Pues la justicia faltaba

Para tantas fealdades, Sus manos fueron verdugos De lo que estaban culpantes. Admirabase Guahab De ver cosas semejantes; Mas los demas no se admiran Ni tienen de que admirarse, Que ya sobre la luz vieron Otros misterios tan grandes. Y por que fuese castigo A los del falso linaje, Afrenta y mas vituperio, No permitio Abdulmutalib, De como cayeron muertos Ninguno los menease, Hasta que toda su casta A la mañana mirasen

Quen la boda de su hijo

Todos salieron á punto Sin que ninguno quedase,

Todos presentes se hallen:

El abatimiento suvo Y de la luz su omenaje. Asi lo aceto Guahab. Y luego antes de acostarse, Avisaron á los deudos A la una v otra parte, Para que en su casamiento A la mañana se hallen, En la vega y fertil sitio Donde para cosas tales Era lugar diputado, Vistoso y muy agradable. Y asi todos se aprestaron Y en platicas importantes, Pasaron toda la noche; Y al tiempo que el rutilante Febo sus rayos tendia, Dorando montes y valles, Que la misma tierra echaba Claredad á todas partes, Mostraronse esta mañana Muy admirables señales De contento y alegria Dignos de mucho estimare: Quatro pendones se vieron En quatro montes tronales, Que entorno el gran patronicio1 A donde habian de juntarse: Otro en el alto zimborio Del alcaba que hizo Ybráhim, Bordados de mil colores,2 No hay quien pueda semblanzarles.Grandes, al viento tendidos Sus dorados tafetanes: Andaban encima de ellos Revolando muchas aves. Haciendo dulce armonia, Cantando diversos cantares; Y todas las alimañas El mismo consorcio hacen Asomados por los visos Mansos sus fieros corajes.3 Ya estaban todos á punto, Los deudos y principales De la ciudad, y á mas de esto Por que nadi se quexase, Se dió bando general Por Maca y todas sus calles,

Que á tales bodas es justo Que todos les acompañen. Salieron pues las compañas Mas honrradas é importantes, Que hasta entonces nacieron<sup>4</sup> Ninguno que les iguale; Salia el gentil mancebo Mas hermoso que diamante, Enmedio de sus hermanos, Y al lado de su buen padre; Gallardamente vestido Con aquel antiguo trage Que sus pasados salian A semejantes solazes. Por otra parte salia En bien concertado alarde Guahab y todos sus deudos, Gente autorizada y grande; Y en el punto que salieron Las dos compañas reales Desplegaron los pendones Sus tafetanes al aire; Todos cinco á un mismo tiempo, Sin que nadi los tocase. Misterio sobre misterio Tantos y tan admirables. Llegaron, pues, de esta suerte A donde habia de tratarse El mas alto casamiento Quen las pasadas edades, Quen las presentes se hizo Ni jamas fué á concertarse: El mas perfecto y mas limpio Que pudo comunicarse En las naciones del mundo; Dedó tiene de engendrarse La mas alta criatura Que nació de carne y sangre. Y como toda la gente Acabó de congregarse, Sentado sobre la yerba Levantóse en pie Abitálib, Mancebo de grande aspecto, Prudente, cortés y afable, Del dichoso desposado

Variante, labores.

 Variante, solazes.

Hermano de padre y madre; Muy paladino de lengua, Y con gracioso semblante, Fué á hablar y antes que hablase Mandó Alláh que los pendones De su movimiento paren; El aire blando asi mismo, El revolar de las aves, Sus cantos y su armonia: Y las fieras y animales Encojen sus corbos cuellos, Que el aliento apenas laten. Todos prestaron oido, Sin que nadie menease Las cejas y las pestañas, Y en un silencio tan grande Soltó la voz de este modo, Mirando á los circunstantes: "La loacion es ad Allah, Rev de todos los alarjes, A quien la loacion se debe Y los limpios homenages. El que nos ha especialado Con yvantajas tan grandes, A donde encerró el provecho De la honrra venerable: Loado es El que nos puso En estado contentable, Pobladores de su casa Y en la Ciudad morantes. Hizónos libres y exemptos Del fornicio y de sus males, Licito el ajuntamiento De las conyugalidades, Para que el fruto que diese Fuese limpio y perdurable, Y para que produciese La gente, y multiplicase En su obidencia y servicio, Y lo bendigan y alaben. Loado y ensantecido Sea aquel que en esta parte Dio lugar, que en este dia Tanta gente se ajuntase. Sabed, honrradas compañas, Quel intento que nos trae Y á lo que habemos salido De Maca y de sus umbrales

Es á pidir en casamiento Nosotros por nuestra parte, En nombre de nuestro hermano Mandado por nuestro padre, A quien todos conoceis, Presente está aqui delante: Abdulláh tiene por nombre, Hijo es de Abdulmutalib, A Guahab pide su hija, Emina para casarse, Cumpliendole á vuestro gusto En arras y en acidaque. Esta es la venida nuestra, No hay para que mas me alargue; Pues sabeis ya nuestro intento De donde procede y nace, Responded, qual se confia De vuestras honrradas faces, Supliendo la falta mia En lo que he sido ignorante." Adelantóse Guahab, Antes que ninguno hablase, Como parte principal A quien la respuesta cabe: "Alhamdulillahi responde, Gente noble é ilustrante, Contentisimos y pagados, Satisfechos y albriciantes Somos de vuestra alleganza,2 Y sin arras ni acidaque Mandamos á nuestra hija Y ella y nosotros, sus padres, Serviremos de alhadia 3 Y lo demas que nos mandes Y loo4 ad Alláh por ello Que tanta merced nos hace, Que mi codicia no estriba En lo que podeis mandarme De interese ni de hacienda, Solo en querer y allegarme A vuestro gran merecer, Ques el mayor delitaje 5 Que yo puedo desear, Ni vosotros podeis darme." Y asi quedó concluido, Y en el punto que Abdullahi Abrazó al querido suegro, Dandose amorosas pazes,

2 Parentesco.

Variante, y todos los.

Tremolaron los pendones  $\mathbf Y$  los cantos de  $\overline{}$ las aves Tazbihando y bendiciendo A quien les dió tal lenguaje. Asi volvieron á Maca Con gozos muy singulares, Donde fué el ajuntamiento Mas limpio y clarificante Quentre varones y hembras Quizo Alláh que se juntasen.1 Amanecio á la mañana Emina muy relumbrante Con la luz que tantas frentes Tuvieron aquel engaste, Y en ella mas relumbraba; Que como llegó al remate Con mas fuerza reverbera, Por que no pasó adelante. Dice Alambez 2 que esta noche Cayeron de sus altares Quantos idolos habia En Maca y sus lugares; Y todos los adevinos Dieron vozes espantables, Diciendo: "Ya es engendrado Muhamad," y en el instante Quedaron enmudecidos Y todos en tierra caen. Por otra parte llamaban De las cortes celestiales:3 "Engendrado es el caudillo De la promesa fincante." Esto decian las fieras, Y publicaban las aves, Y vozeaban los antros Y las aguas de las mares, Y á Emina la albriciaron Con albricias semejantes; Y estas voces retumbaban Su casa por todas partes. Y como ya su preñado A siete meses llegase, Con uno y otro regalo Con albricias y omenajes, Avisó el padre á su hijo Diciendo: "hijo, ya sabes

La obligacion que tenemos, No es bien que mas tiempo aguardes, Parte luego á Yaziriba Y para tu esposa trae Joyas preciosas y honrrosas, Y trae pasas y datiles Para quando el engendrado El mundo alimpie y aclare." Partióse al siguiente dia, Y al cabo de su viaje En entrando en Yaziriba. Quiso el Señor atajarle El corriente de esta vida, Y en su gloria colocarle. Murió sin volver á Maca, Y todos los almalaques Reclamaban ad Alláh, Llorando sin detallarse "¡O' Señor! ¿como permites Que en el vientre de su madre Quede engendrado tu siervo<sup>4</sup> Guerfano, solo y sin padre?" Dixo Alláh; "siervos queridos, No teneis que suplicarme Que yo soy padre piadoso Mas que su padre bastante: Yo lo puse en aquel vientre, Y vo seré él que lo saque; Yo solo y el que á mi mando No hay cosa que no lo allane. Mirad si hay otro poder Que con mi pueda igualarse, Ni quien mejor le defienda, Le crie, conserve y guarde." Y asi aplacaron sus vozes Y declinando sus fazes, Volvieron á sus tasbihes, Sin mas razon replicarle. Emina con su preñado Pasó su tiempo adelante, Hasta que Alláh fué servido Que el fin y el tiempo llegase, Y lo que fué de su parto El nuevo canto 6 da parte.

1 Variante, efectuase.

ART. XVI.—Proverbia Communia Syriaca. By Captain R. F. Burton.

"The genius, spirit, and wit of a nation are discovered in its proverbs." - BACON.

A writer remarks, "If men at the lowest as well as the highest stage of civilization enunciate the same truths, the fact goes to prove that these truths are unimportant." I can hardly assent to the conclusion, even were the premiss correct, whereas it is not. Those familiar with proverbial literature have remarked that some aphorisms are common in matter, and a few even in actual manner and form, to almost all nations and languages. The Syrian, for instance, will say, "The egg of to-day, not the hen of to-morrow;" and "A live dog is better than a dead lion." On the other hand, the points of difference are far more important. aside the sayings which "bear the stamp of their birthplaces, and which wear the colouring and the imagery of their native climes," we find that there are proverbs peculiar to every race—proper to it, as are its syntax and its idiom; that each people speaks out the truth or the half truth which is in it, and, consequently, that for the most part neither the idea nor the wording bear comparison. Moreover, were it a fact that all enunciate the same truth, it by no means proves the latter to be unimportant, except to the few. The student of the nineteenth century will not, for higher thought, consult proverbs or proverbial philosophy, or other saws and instances; but he will treat not a few of them as chapters of anthropological and ethnological history; showing how truth arose in the silent education of the world; how the experience of every-day life gradually took shape and status; how the appreciation of experience became concrete in the pithy

aphorism, till at last the "wisdom of many" gained life by the "wit of one." In it he sees the process of a pencil of light stealing into the child-like savage brain, slowly but surely dispersing the fatal glooms of ignorance and prejudice, of falsehood and barbarism; assuming various degrees of illumination, and at last becoming the perfect day of wisdom and judgment, of truth and civilization. No wonder, as Count Lucann observes, that proverbs have ever been so

popular with the human race.

As regards these Proverbia Communia. The labours of Pocock, Erpenius, Freytag, and others, have introduced to Europe the repertories of classical Amsál (العنال), in which the Arabs delighted from the days of the Khalifah Ali to those of El Maydani. My object is not so high. Returning to Western Asia, and resuming the studies which had been interrupted by long service in Africa and South America, I at once recommenced them at the commencement—the alloquialisms of a people new to me. Presently I remembered Burckhardt's Amsal el Masr (Arabic and English, 1830), which aimed at illustrating manners and customs from proverbial sayings current at Cairo, and it appeared to me that the same might be done for Syria.

The modern dialect of Syria retains distinct traces of the old Aramæan, and, as may be expected in a land where men live much at home, every great city—Damascus, for instance—preserves peculiar words and phrases. And without living interpretation it is impossible to master sayings of purely local use and unfamiliar allusion, further mystified by proverbial sententiousness and conciseness. They must, however, be learnt, and even committed to memory, before a stranger can feel himself at home with the people. Here proverbs have not passed from the learned to the vulgar tongues; they are in universal circulation, amongst all degrees, from the ignorant to the man of highest cultivation; and the apposite use of aphorisms is, like wit and eloquence, a manner of power. Some of the sayings are mostly confined to women, and the

<sup>1</sup> His "Amsal el Arab," in four vols. octavo, is an excerpt from the vast collection of El Maydani.

nursery; not a few of them have some popular tale whose point they resume. Many are quoted only in part, the rest being suppressed for some obvious reason. So we, for instance, might say "facit per alium." As will be seen, the peculiar vagueness inherent in Arabic speech allows them an immense range of application, and permits them to be used in a variety of senses, which require from us a certain amount of study. Nor is the labour of studying them for their own sake in vain. It is highly interesting to observe the modern succedaneum for the old aphoristic philosophy of Syria, which in some form or other has overspread the civilized world.

Of all the races known to me, the Syrians and certain West African tribes are those who delight most in proverbs. The Spanish type, immortalized in Sancho Pança comes next; the Portuguese loses much of the characteristic; and the Brazilian, his descendant, has wholly lost it. When visiting Goruba I was so much struck by the speeches and harangues—mere conglomerates of quotations—that I persuaded Messrs. Tinsley to publish, in 1865, a collection of 2859 proverbs, popular amongst seven Negroid and Negro The volume, which bore the title of "Wit and Wisdom from West Africa," was not so successful as the Adagia of Erasmus, and of course brought out the remark that the "sparkles of wit were few and faint, and the wisdom of the mildest order." This was to be expected. But my object was to make the people describe themselves, to put them, as it were, in the witness-box upon their racial trial. Pace the critics who differed from me, I cannot but think that the idea of the compilation was good. At any rate, it obtained the approval of one whose opinion in such a matter is worth a thousand cavils of men, who, ignorant of the subject, must borrow from the book itself the arms with which they would assail it. I need hardly mention the name of Mr. William Stirling, now Sir William Stirling Maxwell, of Keir.

This little repertory of proverbs, which I hope soon to supplement with others, was supplied to me by Mr. Hanna Mish, honorary dragoman of H.B.M.'s Consulate, Damascus.

#### الذي زوجها معها بتدير القمر باصبعها 1.

"She who hath her husband with her, shall turn the moon with her finger."

# جيبوا بنات ولا تقعدوا بطّالات 2.

"Bring girls, and sit not to no purpose."—It is better (for a woman) to bear girls (if she cannot have boys), and not to remain childless.

### بنيّه على بنيّه ولا حائل سنيّه 3.

"Girl upon girl, and not retaining (barren) for a year."—Meaning the same as No. 2.

# ستى من غير وحام مريضة . 4.

"My lady without (the) queasiness (of pregnancy) is unwell."—Said of a woman who affects to be an invalid; to be delicate, to be interesting.

# الحب والحبل والركوب على جمل لا يختفوا 5.

"Love and pregnancy, and riding upon a camel, cannot be hid."—Similar to the Persian "Musk and murder cannot be concealed."

### كل شي تشتغل السمرة لا يكفيها خطوط و حمره 6.

"However much the brown woman works, it will not pay for her eye-paint and rouge."—Applied to men and women who spend more than they make. So the Turkish proverb, Fantasia chok, parah yok.

## دور الدوره واو دارت وخد بنت البيت واو بارت .7

"Go the round way, though (it be) long, and marry the daughter of a house (i.e. good family), though she be stale (or has lain fallow, from

# تتكنّى القرعة بشعر بنت خالتها 8.

"The scald-headed woman prides herself on the hair of her (maternal) aunt's daughter."—Said about a small or a bad man who boasts the greatness or the goodness of his relatives.

# العمار يتكنى بان العصان خاله .9

"The ass prides himself upon the horse being his (maternal) uncle."—Meaning the same as No. 8.

### مثل اليهود على اخف الصنايع 10.

"Like the Jew who (ever) chooses the meanest work."—Said of one who neglects important for trivial matters.

# مثل فقرا اليهود لا دنيا ولا اخره 11.

"Like Jew beggars, who enjoy neither this world nor the next."—Said of a man who fails in life. So they also say Misl el Fawákhireh (plur. of Fakhúri, a jar-maker) wa la dunyá wa la ákhireh. The jar-maker is proverbially a rascal, and his calling is a poor one. The first three words are generally found sufficient; and to make it more offensive to the Jews, Moslems say, Misl el yahúd.

# تفشفشي يا خاله كل الدعاوى بطاله 12.

"Be wroth, O aunt! (here means a stepmother) for all thy curses are in vain."—Said to any one who curses or uses bad language. Fishfish imeans literally "vapid wine."

### الف دعوى ما شقت قميص 13.

"A thousand curses never tore a shirt."—So our adage, "Hard words break no bones."

# لا الفارة طاهرة ولا دعاها مستجاب . 14.

"The mouse is not pure, nor is her prayer answered (by heaven)."—Said to a bad man who curses.

# طب الجرة على فمها تطلع البنت مثل امها .15.

"Turn the jar mouth downwards: the daughter will turn out like the mother."—The first half is merely for the purpose of rhyme. Li ummihá is also said, instead of Mislummihá.

يا بنت من علاكي عزَّت و بيت حماكي 16.

"Girl, who raised thee (so high)? Thine honour (i.e. husband) and the house of thy mother-in-law." (Bayt Hamá, the husband's family; Hamu, father-in-law; and Hamá, mother-in-law.)

# رقعه شنعه ولا لحم بصال 17.

"(Let a man wear) foul rags, but not show (a naked) skin."
—Said, for instance, to woman. Meaning that though poor she may be honest.

#### يا بنت لا تفرحي بثوب عرسك يا ما وراه من الشقا .18

"Girl! don't exult in thy wedding dress. Ah! how much trouble is behind it."—Said to a man enjoying himself without thought of the future.

### لا تروح بين القبور ولا تشم رايحة المنتنة . 19

"Go not amongst the tombs; nor smell evil odours."—Said to one, for instance, who wishes to meddle in troubles which do not concern him.

### لا تقول للمغنى غنى ولا للمصلى صلى 20.

"Say not to the singer, sing, nor to those praying, pray."
—Meaning, it is useless to ask a man to do what he is compelled to do; he will only make excuses, and perhaps refuse.

#### بدل أن تقول للدجاجه كش أضربها واكسر رجلها 21.

"Instead of saying to the hen Kish (pst! be off), strike her and break her leg."—Spoken by one asking a favour from another; and when the latter, who can grant it, makes excuses and puts him off.

#### رافق الديك وشوف وين يوديك 22.

"Befriend the cock, and see where he bears you." Evil communications corrupt good manners. (Shuf for shuf: others say , the owl.)

### كل عنزه معلقه بكر عوبها 23.

"Every goat is stuck to her circle."—Said after giving good advice to a man who will not take it.

#### كل الدروب توصل للطاحون . 24.

(Or, Kull ud durub ala 't 'Tahun.) "All the roads lead to the mill."—Spoken to a man who tries roundabout ways, when he can go straight to the point.

# مافى طلعه حتى قَبالها نزله 25.

"There is no rising up without a falling down in front of it."—Meaning, that any man will have his turn of good and bad fortune.

ما يجي الترياق من العراق حتى يكون ملسوع الهوام فارق . 26.

"The tiryak (Mithridate) will not come from Irak (where it is made) till the man bitten by the snakes is released (by death)."—Said by a man whose important business is deferred. Others say, Malsu' el hawá, i.e. the victim of love.

# على قد بساطك مد رجليك 27.

"According to the size of your carpet stretch your legs."— The same as our "Cut your coat according to your cloth."

# لسانه مثل مقص السكاف لا يقص الا التجاسه . 28.

"Like a cobbler's scissors, which cut nothing but the impure (leather)."—Spoken of a foul-mouthed man. Often the first half of this proverb is found enough.

# كل الكلاب احسن من حَيمور . 29

"Every dog is better than Haymur (proper name of dog, generally pronounced Hammur)."—The speaker is supposed to declare his dog worse than all others. Said by a man who complains of his wife, children, friends, and so forth.

#### مثل الكلاب شبعه او جوعه . 30

"Like dogs, full or empty (it is all the same)."—Benevolently said of a poor man, or of one who wants everything.

# النذر للدّير و الوّحُم على سمعان 31.

"Gifts to the convent and filth (polite people prefer libeled, toil and trouble) for Samaan (proper name of the convent servant)."—Said of a servant or a slave working for his master.

# كل الديوك تصبح والصيت الى ابو قونبره 32.

"All the cocks crow, but honour is given to the crested cock (Abu kumburah, a bird with feathered tuft, and there-

fore more remarkable)."—Spoken of a man who carries off honours or profit from those more deserving.

"Everything is soap to the Arab."—Meaning, all is fish that comes to his net.

"Hanná, son of Manná, who lived a thousand one hundred years, and never enjoyed himself."—Said to one complaining of a little misery. The Spanish Ommiad Khalifet el Nasr, "the heir of prosperity," was more easily contented; he owned to the happy days in a reign of fifty years and seven months.

"When the Hauran (plain) fails, Hijaneh (the swampy region east of Damascus) supplies (provision)."—Popularly said in praise of Hijaneh.

"My rump is my rump, and the land is the Sultán's."— Spoken by a man, for instance, when another would turn him out of his place or property.

"The tassel of a saddle-bag, which cannot straighten nor incline (the saddle)."—Applied to a ne'er-do-weel, a useless fellow, a man of no consequence.

"A loaf for a loaf (i.e. lend him a loaf), and let not thy neighbour remain hungry (for he will return thy loan)."—
Meaning, assist thy brother man, and he will assist thee.

"If your bread be greater than our bread, shame us with a loaf!"—Said to one from whom a favour is wanted, and who boasts that he can do it.

#### جارك القريب ولا اخوك البعيد 40.

"Your neighbour who is near, and not your brother who is far."—Meaning, your neighbour who does you good is better than a brother who does not. Also, a live dog is better than a dead lion.

#### العين ما ترتفع فوق اليحاجب 41.

"The eye cannot rise above the eyebrow."—Said by an inferior to a superior, who would do him more honour than he deserves.

## العين ما تقاوم منحرز . 42

"The eye does not oppose a collyrium needle."—Meaning, you are too cunning of fence for me to fight you.

#### البومة لوكان فيها خير ما فاتها الصيّاد . 43.

"If there were any good in the owl, the hunter would not pass her by (but would have shot her)." Spoken thus, a man would buy an article; he hears that it has been seen and not bought by another whose judgment he values, and then he applies the proverb. Also, it means that the value-lessness of a person or thing is his or its safety.

#### بمصريّة گرفس ما بهينک يانفس 44.

"One para (misriyeh) worth of watercress (is enough), and I won't dishonour you, O myself!"—Better be contented with humble fare (etc.) than support an obligation.

#### شهر الذي ما منه فايدة لا تعد ايامه 45.

"Of the month which does not profit you, count not the days."—Meaning, take no useless trouble about what will not do you good.

#### يا ويل الذي ما له اضافرويا ويل الذي ما له ظهر . 46

"Wee to him who has no nails, and wee to him who has no (one to) back (him)."—The man who has no nails cannot enjoy King James's greatest pleasure, and the friendless man cannot prosper.

# كل ديك على مزبلته صياح 47.

"Every cock crows loudly on his own dunghill."

"The stone in its place is a kantár (hundredweight)."—The same as No 47. Also they say, Hasweh saghireh tasnud khábiyeh kantáriyeh. "The little pebble supports (upright) the jar that holds a kantár (hundredweight)."

## الذي يخفف راسه يتعب رجليه 49.

"He whose head is light soon tires his feet."—Meaning, that the foot is always running about; or said of a man who does a thing without reflection, his bolt is soon shot.

"Speech is of silver, silence is of gold."—An old proverb in Syria; a comparatively new saying amongst us.

# فرس الاصيله لا يعيبها جِلالها 51.

"A thorough-bred mare is not disgraced by her (bad) saddle." They also say عدته iddat-há, "her packsaddle." The Jilál is the flat pad, the Sarj is after the Frankish fashion.— Spoken, for instance, of a rich man in a bad hat.

## مصفايه ما بيعيقها ثقب . 52.

"The cullender is not hindered by a hole (more or less)."
—Applied, for instance, to a man who habitually lies.

## كل شي على بابه يشابه اصحا به 53.

"Every thing in its place resembles its race."—There is a similar saying, Kullu aná yunzhah (ينشي) má fih. "Every pot pours out its (own contents)." Good trees bear good fruits.

"Quoth the merchant to his son, look at the habitual buyer (the pratique), and deal to him accordingly."—Meaning, treat every man as he deserves.

# وقعت الفارة من القف قالت لها السقطة الله .55 جوبتها انت ابعدى عنى وانا بالف خير من الله

"The mouse fell from the ceiling, and the cat cried 'Allah.' The mouse replied (generally kálat liha el fárah), 'go far from me, and I am with a thousand blessings from Allah.'" Allah, is ejaculated when a man stumbles or falls. Said to a man who is getting into the hands of those who will harm him.

#### وقعت البقرة وكثرت السلاخين . 56.

"When the cow falls, the knackers flock (to her)."—Meaning, when a man gets into trouble his enemies collect to injure him.

مستهزى الرجال برأس لفت يُقتل . 57.

"He who despises men will be killed (for the sake of) a turnip."—Meaning that if a man oppose one stronger than himself he will be lost by the least faux pas.

#### لو ما جراده ما وقع عصفر . 58

"Had there not been a locust, the bird would not have fallen."—This alludes to a long story about a bird following a locust into a house, and being trapped. The king was anxious to take a young woman called Jeradeh (the locust) from her old husband named Usfur (the bird); and the latter managed to escape by using the proverb. It is applied to a person who ventures too much. Also it means, "If I had not bribed him, I should not have won my cause."

یا ما اکثر اصحابی عند ما کان کرمی دبس ویا ما اقل اصحابی .59 عند ما صار کرمی پیس

"Oh! how many were my friends when my vines produced syrup; and oh! how few were my friends when that same vine dried up."—Familiar to all, Donec eris feli multos numerabis amicos.

## مثل الدجاج دايمًا يهدس بالغرابله 60.

"Like the fowls which always think of the broken (or spoilt, corn, poultry food)."—Said to a man always talking shop, about money, or women, for instance.

#### ما دامك على هل حصيرة لا هي طويلة ولا هي قصيرة

"As long as you lie on this mat, it will become neither longer nor shorter."—Meaning, whilst you are so lazy and inactive, you will do no good, you will not prosper.

"What is the bitter to one (who has tasted) the more bitter?"—Said when misfortunes or sorrows come one after the other.

"Let not the eye discover what pains the heart."—Meaning, wink at small annoyances. Also, the heart does not grieve at what the eye does not see.

## مثل الدجاجه ما تملك على بيضها 64.

"Like the hen who is not mistress of her own eggs."—Said to a man of property who is not master in his own house.

"Every worm-eaten (corn-)grain has a blind (others say one-eyed) measurer."—Reproving a servant, for instance, who buys a bad article. Also, *Toute fadette a son fadet*.

"Lying is the salt (goodness) of men, and shameful (only) to one who believes."—Said to a great liar, whose lies are, like salt, required for all kinds of food. It is also used in a literal sense, even as Bacon declared that the mixture of a lie doth ever add pleasure—only a little less usually than the Syrian adage. The first half is often said without the second, and then it becomes a curious index of material thought.

"Blame not the absent (who is doing your work) till he shall appear."—Similar to our *De mortuis*, etc. Les absents ont toujours tort.

#### مثل المرابعين يفرح بفتم العدال .68

"Like the Murábain (hired labourers) who rejoice at the opening of the grain-bags (which benefit the master)."—Spoken to or about a man who works for another's advantage.

## الحق الكذّاب لباب الدار 69.

"Follow the liar to the house-door (i.e. to the end of his lies)."—Said of a "promising" man, push him as far as possible.

الذى يلاعب القط يحتمل خراميشه 70.

"He who plays with the cat must suffer her claws."—Addressed to one, for instance, who is insulted after speaking to a rude fellow, who has touched pitch, and has been defiled.

## من كثرة بناته صار الكلب صهرة . 71.

"From the number of his daughters, even the dog (in the streets) has become his son-in-law."—The man with many (plain) daughters must make presents to every one in order to get them off his hands.

# مثل حمار الزبال يمشى عايق و محمّل وخم . 72.

"Like the dustman's donkey, who paces swaggering, and yet carries only dirt."—Spoken of or to a pretentious fellow. Also they call him *Himar Muhammal Asfár*, "ass laden with books."

## من يعتاز الكلب يقوله صباح النحيريا خالى .73

"He who wants the dog says to him, 'Good morning, O my uncle,' (or, Sabahak el khayr haji kalb, 'Good morning, Mister Dog).'"—So the people of Trinidad wittily say,

Dêrr chein, cé chein ; Devant chein Cé, "Missier Chein."

اليد الذي ما تقدر تعضها بوسها و ادعى عليها بالكسر .74

"The hand which you cannot bite, kiss it, and pray that it may be broken."—Same meaning as 73. They also say, "He kisses the hands and he laughs at the beards."

## جهنم و بين البوابيج 75.

"Hell and amongst the slippers?"—Meaning, for instance, that when you condescend to visit your enemy you expect to be civilly treated, and yet you are not—adding insult to injury. Also, don't let people say that I am in hell and also disgraced; I am lost in both worlds.

"Every one has stung him, even the horse-fly."—Said about a man who suffers from every one.

"The crooked furrow is (the work) of the big bull."— Meaning that the fault is from the great man. A saying often used about the rulers, who, of course, should set the best example.

ما عُمرة مقسِّم دخل الجنه . 78.

"Never in all his life shall the divider (arbitrator) go to heaven."—Because the arbitrator in these lands is always a rascal; he gets the best portion—the oyster, not the shells.

"Get rid of the *Badawi* (wild man) with a cloak, and not with the whole cloak-market."—Meaning, sacrifice a little to save much.

اذكر الذيب وهيّ القضيب .80

"Speak of the wolf, and make ready the club."—So our adage, "Talk of the Devil," etc.

# ابن الحلال عند ذكره يبان . 81.

"The honest man appears when he is spoken of."—Said as No. 80. Also about a man who does good.

# لاتستكثر اولادك على عزرائل ولا مالك على الظُلَّام . 82

"Do not boast of thy many children before Izrail (the angel of death), or of thy wealth before the tyrants."—The first half of this phrase is the more used.

#### لا تقول فول حتى يصير بالمكيول 83.

"Do not say 'beans' before they are in the measure."—So our proverb about counting chickens; the vision of Mirza, etc.

# حساب الحقّلة ما بيجي على حساب البيدر . 84.

"The estimate of the field (whose crop is still in grass) does not agree with the estimate of the thrashing-floor."—Same signification as 83.

## يا حواجبه يا عَينيه على المغتسل بائن .85

"O his (fine) eyebrows! O his (fine) eyes! they show upon the mughtasal (place where the Moslem dead are washed)."—This is especially a woman's proverb, meaning, it is useless to praise a thing which is before your eyes. They generally say, Ya hawajibhu, ya uyunhu, etc.

#### شد النحيط ومطه الذي عليه شي بيحطه 86.

"Tighten the thread and draw it close; whose has a share let him put it down (contribute it)."—Said, for instance, to a shareholder, one of a picnic, etc., who grumbles.

## عشرة حُلّبية تحنك وشرب مويه .87

"A friendly party of Aleppines laugh, jaw, and drink water."—Our "tea and turn out." Tahannak from hanak, a jaw; in low language, as we say, to jaw, to chaff.

# ديك الفحيح من البيضة يصيح .88

"The clever cock crows from the egg."—Alluding to a sharp boy: also meaning that the boy is the father of the man.

### كل الجمال بتعارك ما عدا جملنا بارك . 89

"All the camels are fighting together, except our camel, which is kneeling."—Said by a man to himself when others are working round him, and he does nothing. Jamal-kum is used if applied to another. It also means all are employed except myself.

## مثل الحمام حنية بلا رضاعه . 90

"Like the pigeon, fond (of her young) without suckling (them)."—Spoken of a man who is civil, but who will not spend his money.

انظريا حمار حتى يطلع الربيع 91.

"Wait (for grass), O donkey, until spring comes."—Said to a man who works without getting his wage. *Unsur* is for *intasir*.

هل اقرع عمرى ما جمّرت .92

"This scald-head all my life I never cured (cleaned)."—The akra is always supposed to be a quarrelsome man. The saying would mean, I never met with such a tiger; I never interfere in this matter, and so forth. Tajmir is especially applied to burnishing gold and silver.

# مثل شحمة قرد ما بيسلى ولا بيذوب . 93.

"Like the monkey's fat, which does not soften (bi-yash) and does not melt (bi-yadúb)."—Said of an impracticable or avaricious man. wilu means becoming semi-liquified.

# احترت فیک یا اقرع کیف اداویک . 94.

"I marvel at thee, O scald-head! how I shall cure thee?"
—Said when a man will not consent to anything. Like
No. 93.

الكيمل احسن من العما .95

"Kohl (collyrium) is better than blindness."—Meaning, better to have a little than to lose all; because the use of kohl for a month may save the eye. The better form is el ramad, (ophthalmia) is better, etc.

# كل ما شفت اعمى طبه ما انت اخبر من ربه . 96

"When thou seest the blind man beat him down; (for) thou art not greater than his God."—Punish the bad man, because he cannot do good. The Creator made the blind man blind. Also said of an ungrateful man. They tell a tale of the Prophet Jonas, who prayed the Lord to heal a blind boy, whereupon the latter began to stone him; the prophet quoted the proverb as above.

كنيسة القريبة ما بتشفى 97.

"The church which is near does not cure."—Said of a man, for instance, who buys (or consults a doctor, etc.) from afar, when he can buy as well near. Also of near relations, one's cousins, for instance. Opposed to the Scotch idea of blood being thicker than water.

#### حس الطبل يوذي الى بعيد .98

"The noise of the kettledrum goes far."—Report flies abroad: the end often omitted is wa juwwáthu fárigh, "and she is empty inside." That would be said of a windy boaster, etc.

صوت الطبل غطّا النايّات .99

"The sound of the (big) drum drowns the flute."—Said of a great man when a greater appears. Also in the form  $Aj\dot{a}$  (has come) el Tabl, etc.

جمل مطرح الجمل يبرك . 100

"The camel kneels on the place of the camel."—Spoken, for example, when dismissing a servant; another can soon be found. "There are as good fishes in the sea," etc.

كنت اصلَّى حتى يحصلي لمَّا حصلَّى بطلتُ اصلى ١٥١.

"I used to pray till I obtained (what I prayed for); but when I obtained it, I left off praying."—Meaning, for instance, women fawn and flatter till they get what they want.

#### المعروف مع غير اهله ضايع 102.

"Kindness is wasted on the undeserving (the ungrateful)."

خذ الاصيل ولو انه على العصير 103.

"Take the noble, though (sleeping) upon a mat."—Meaning, in marriage (or in hiring servants, and so forth) prefer blood to money.

الجمل لو شاف حردبته لوقع فك رقبته 104.

"If the camel had seen his hunchback he would have fallen and broken his neck."—Corresponds with Burns' lines about the "Giftie."

# قالوا للعميان غلى الزيت قالوا هذا الهم لا يعنينا . 105

"They said to the blind (men), 'Oil is dear!' They replied, 'This is a sorrow which does not touch us!'"—The blind not wanting lamps. The saying is applied to those who spread reports that do not concern the hearer.

"Whose tries the tried his intellect is belied."—Meaning that he is a fool.

## حط قردک علی قرده ، 107.

"Put thy monkey upon his monkey."—Meaning, if a man will not hear you, din it always into his ears; or try who is the better man. A favourite proverb with the Jews.

## لا تدعى لصاحبك بالسعاده تعدمه 108.

"Pray not for the prosperity of thy friend, lest thou destroy him."—Meaning, that when prosperous he will forget you. Said to a friend who has waxed rich.

## اذا انعاق مرسالك استبشر فيه . 109

"If thy messenger delay, hold it (a sign of) good news."—As we say, "No news good news."

# لا تكثر الزيارة على الملوك اذا كانوا اهلك يكرهوك 110.

"Visit not often the kings (i.e. the great), for even if related to you they will hate you."—Said to a tuft-hunter; also an excuse popularly made to one who reproaches you with not visiting him often enough.

# كن بعيد وانتظر الذي تريد 111.

"Remain afar and await what you want."—Equivalent to "Await the opportunity." Almost same signification as 110.

"Too much tying loosens."—Meaning that man loses by pushing too fast.

# ان كان ماشى على هل درب خيط منظر مسلم 113.

"If he (the muleteer, etc.) be walking upon this road, let him sew with another pack-needle."—Said, for instance, of one who asks an impossible favour, deeming it easy, "Let him take some other thought;" this pack-needle can do no good.

## البير الفارغ لا يملاه الندا . . 114

"Dew fills not upon an empty well."—Said to a person who lives beyond his income.

#### هذه المِصفاة لا يملا ظروف 115.

"This filter will not fill the (water-) skins."—Same as 114.

#### من يدق الباب يسمع المجواب . 116

"Whose knocks at the door hears the reply."—Similar to our "Knock, and it shall be opened to you."

#### لا ظرف انخزق ولا زيت اندلق 117.

"No skin has burst, and no oil has been lost (lit. poured out)."—Used when a man wishes, for instance, to decline a contract.

# انا دقیت علے باب و ما فاتحوا لک فتش علے عرضک ورح . 118

"If thou knock at a door which is not opened to thee, consult thine honour and go."—Said when a favour is asked of one who makes excuses.

# لا فاطمه بالعلم ولا حسن بالكُتَّاب . 119

"Is not Fatimah (my daughter) at her task? Is not Hasan (my son) at his school?"—Meaning "What matter to me?" Kuttåb in low language means a school.

#### لا من الذين آمنوا ولا من الذين كفروا . 120

"He is not of those who believe, or of those who disbelieve."
—Said of a man who does not care for anything. (Quoted from the Koran.)

#### مثل حمار المطران عاقل شيطان 121.

"Like the archbishop's ass, a clever devil."—Applied to a slippery fellow. They also say, Misl himar el khákhán, "Like the ass of the Rabbi."

"When you hit, hurt (i.e., let him feel it): when you feed, fill."—Our Age quod agis.

"Either the thing is good, or to leave it (undone) is good."—Same signification as 122.

"Pass by thy foe hungry; but pass him not naked (so that he can see you)."—Meaning that if you ask a favour of an enemy, do not let him see that you want it.

#### العما ولاهذه الدوله . 125

"Blindness, and not (rather than) this government."— Said when an enemy gets into power. They tell a tale that the bear, the fox, and the monkey were in conversation, and the former expressed a desire to be Wali (Governor-General) of Syria. "What will you do for me?" said the fox. "I will make you my Kihaya (secretary)," was the reply. "Strike me blind," cried the monkey, "before I see such a government!"

#### خس تعرفه ولا سعد تتعرف به 126.

"An unlucky man whom thou knowest, and not (rather than) a lucky man whom thou dost not know."—Meaning, if you dismiss a servant, or drop a friend, you will probably take one worse. For Sa'ad some say Jayyid (noble). They also say, A'l Usman marhimin bi yeji wahid anhas min el sani, "The sons of Usman (the Ottomans) are pitied, (because) he who comes is worse than the other (preceding him)."

#### س غير دف بيرقص 127.

"Without the timbrel he dances."—Said of an excitable, passionate, fidgety man.

## قالوا للاعمى ايش بتريد قال جَوز عيون 128.

They said to the blind man, "What dost thou desire?" He replied, "A pair of eyes!"—Said when you offer a thing which you know is wanted.

#### الذي ما هو من ظهرك كلما جنّ افرحله 129.

"He who is not of thy loins, however mad he be, be glad."
—Because his madness does not concern you. A rascal proverb, and great contrast to the *Homo sum*, etc.

## حبيبي مليح واجأه هبة ريح 130.

"My lover is handsome, and a breath of wind came to him (and made him love me the more)."—Meaning, he was glad (or grieved), and now he is the more gladdened (or grieved). To whom much is given, more shall be given us.

#### حبيب بحبّه ولو كان عبد اسود 131.

"I love my friend, though he be a black slave."—Said when a man blames you for liking what is not worthy.

#### مثل معلم الاولاد حاضر الدقن وعايب العقل - 132

"Like the teacher of boys, whose beard is there, but whose wits are nowhere."—Said to an absent man, one cupo concentrate, etc. There are the usual multitude of stories against schoolmasters. It is enough to quote part of this proverb, e.g. Házir el dakan.

# عزيمة الحمار للعرس يا للحطب يا اللموية . 133.

"The invitation of the ass to a wedding is to (carry) wood or water."—Said, for instance, of a man who has no right to be in a distinguished assembly; of one who works without pay, etc.

# بلادى ولو جارت على عديّة واهلى ولو شَحو اعلّى كرامة . 134

"(It is) my country (home), although comfort has fallen out with me: (it is) my family, although they fail to be friend me."—Used, for instance, when advising an exile to go home.

#### لو ما كان الوطن قتّال كانت بلاد السؤ خراب 135.

"If (one's) birth-place were not deadly, the poor lands (of the world) would be deserts, (as no one would go abroad)."—Almost the same as No. 134.

#### الذى ما بده يجوّز بنته يغلى نقدها 136.

"He who wisheth not to marry his daughter asks much (ready) money."—Nakd is the same as Mahr, the pre-nuptial settlement made upon the Moslemah. Said of one, who not wishing to sell, asks a ridiculous price. In Syria, men do not refuse to part with an article to a superior, but demand something unconscionable, as £100 for a dog.

#### بيحكى من كل وادى عصا 137.

"He talks a stick from every valley."—Said of one who talks much nonsense. A favourite proverb with the peasantry; not used in the city, but of course intelligible.

#### كما ستى كما سيدى 138.

"Like my mistress, like my master."—Supposed to be said in the language of a black slave girl. Applied to a man who cannot get satisfaction from or content any one. It would also mean, "There is no good (to be got) from my mistress or my master." Amongst Syrian Moslems the grandchildren address their grandparents Sidi and Sitti. The Christians for Sidi would say Jaddi.

## ما يبحك بدنك الاضفرك . 139.

"No nail can scratch (thy body) but thine own."—Advising a man to do his own business, and not to ask the aid of others.

"The (live) coal burns only its place."—Meaning the heart knoweth its own bitterness, etc. Said to those who administer useless pity.

## الذى تخدمه طيعه والذى ترهنه بيعه 141.

"Obey the man thou servest, and sell the thing thou pledgest."—Because it is useless to keep it. The proverb means, finish off your business—Age quod agis.

## بيت الذي رباني ما بينسأني . 142.

"The house which brought me up will not give me up (forget me)."—Although you will not assist me, others will.

# كل شي ترتبه ينفعك الابني آدم يقلعك 143.

"Every thing (which) thou plantest will profit thee, save the son of man, who will uproot thee."—Ingratitude is apparently the rule in Syria.

# جبناك يا اقرع توانسنا كشفت قرعتك وخوفتنا 144.

"We brought thee, O scald-head! to be company with us; thou didst uncover thy scald-head and frighten us."—Said of a friend whom you summon to your aid, and yet he goes against you.

## من تزوج من غير ملته يموت بغير علته 145.

"Whose marries out of his faith, he dies a living death (lit. he dies of a disease besides his own disease)."—The signification is evident. The proverb is also said to one who meddles with what does not concern him.

# من آمنک لا تحونه ولو کنت خوان 146.

"One who trusts thee, deceive not, though thou be a deceiver."

## ان ضاعت الامانة اعمل مخزنك عُبك 147.

"If trust be broken make thy pocket thy store."—Spoken to a man when you lose confidence in him.

## يقتل القتيل ويطلع في جنازته 148.

"He kills the killed (man) and goes to his funeral."—Applied to a man who tricks you and pretends sympathy or friendship.

# هلی بدّه نے ما یقول اے 149.

"He who wants nah (goodies), says not Ah."—Meaning, who wants to be a rich or great man must not show funk or doubt.

In Syria, and especially in Damascus, there is a child's language, which may perhaps number a hundred words, and which has found its way into literature. Witness the following rather pathetic "Rubai" of the Shaykh Abd el Ghani el Nablusi:

طعمیتک النم و نمنم وتے النے وسقیتک انبو والبستک حریر الدے وتطلب النس منی ما اقدر اقل لک ہے الیوم یا منیتی انا البعبع و غیری الدے

"I fed thee with the nam (goodies) and the nam-nam (goody-goodies);

And I gave thee drink (unbu), and I clothed thee in silk the dah (nice);

And when thou askest a tip (tiss) I could not say thee bah (there is none);

But to-day, O my beloved! I am the bugbear (bu'bu'), and another man is the nice (dah)."

In the proverb nah is a child's word for sweetmeats. Ah is the exclamation when eating something too hot, or when wanting to be led to the closet; in the latter sense kikh and kukh are used by the nurse. Daadah means "walking," du, "falling," 'a-'a (ti), "going near something dirty." The camel, the horse, the ass, all have their nursery names, and these are sometimes by no means easy to write.

#### خاص التجارة لا مكسب ولا خصاره 150.

"The specialty of trade is not to gain and not to lose."—Said to a man when disappointed of a great profit.

## مثل الذى اسلم الظهر ومات العصر عيسيل تبرّ منه ومحمد .151. ما عرف فيه

"As one who Islamized at noon, and died (before prayers) in the afternoon; Jesus got rid of him, and Mohammed has not learned him."—Between two stools you fall to the ground.

كلشي عند العطار الاحبني غصب ما فيش 152.

"Everything is (to be found) in the druggist's shop, but 'love-me-by-force' is not there."—Applied to one who would force his friendship upon another.

# لا نحلتك ولا تعقصني 153.

"(Give me) not thy bee, and do not sting me."—Said to a treacherous man who pretends to be friendly or who talks "honey-mouf."

#### الذي يموت يوصيك باولاده 154.

"He who dies bequeaths to thee his children."—Quoted of a person who has not done the good you expected him to do. Some end the proverb—yamútú min al jua, "they (the children) die of hunger."

#### لبس العيرة ما بيدقي 155.

"The borrowed cloak never warms."—Spoken by a man to whom a favour is done ungraciously.

شغل الذي ما بيطلع من القلب عناينة صعب 156.

"The thing which comes not from the heart; its assistance is hard."—Almost the same as 155.

## دق المأ وهي مأ 157.

"Beat the water, and (still) it is water."—Meaning a pigheaded man who agrees to nothing.

الذي ما تتعب به الايادي ما بتحزن عليه القلوب 158.

"What the hand has not toiled for, the heart does not moil for."—We say, "Soon won, soon lost."

#### كبر البيدر ولا شماتة الاعدا . 159

"The greatness of the thrashing-floor, and not the exultation of thine enemies."—Meaning, he works hard in order to disappoint those who would revel in his misfortunes.

# المجنون ما له الّا اهله 160.

"The madman has none (to care for him) but his own (people)."—Said to a man who is friendly, and from whom you want a favour. Also meaning, "No one will have patience with your illhaps but a relative." A similar saying is, Má li yahinn al 'al úd illa kishruh, "No one sympathizes with the lute except its wood" (its shell). Applied to the wife taking the part of her husband, etc.

# تَعلُّم من العشق كلمة اوحشتنا . 161

"He has learned from love (only) the word Auhashtaná,"
"(You have made me sad by your absence," "it is long since
I saw you)."—He learns only that, and he pretends to know
much. Applied to a man who would be a sage, a doctor, a
merchant, etc.

المولّى ما له صاحب 162.

"The departed (from this world) has no friend."—Spoken of a man always changing his friends during life.

## يوم الله يعين الله 163.

"On God's day, God helps."—Said, for instance, to a person who predicts your failure.

# ارض الواطية تشرب مأ ها ومأ غيرها . 164

"The lowland drinks its own water and the water of the other (upland)."—Meaning, he keeps friendly with all.

# الذي يا خذ امي يصيرعمي 165.

"He who marries my mother becomes my (step-) father."— We must be resigned to those who govern us. *Amm* is the paternal uncle, the step-father, or the father-in-law.

#### ما يكفى المية موته بل عصبته بالقبر . 166

"Death is not enough for the dead, he must be squeezed in his grave."—Meaning, a man not only dies, his family must spend money on his funeral. Said also, when, for instance, a man has too much to do, and more business comes. A similar saying is khurkah (for khirkah) fauk el khurduk, a wad or rag upon the (charge of small) shot; and Shankuleh fauk el himl, a package upon the load—the last straw that breaks the camel's back.

#### قلنا لك شويه ما قلنا لك احرقه 167.

"We said to thee, 'cook it,' not burn it."—Pas de zèle.

## انفنحت الطبل و تفرقت العشّاق . 168.

"The timbrel burst and the lovers were scattered."—Quoted when offence is taken in company and all part displeased.

#### كل جديد له بهجه و كل عتيق له دفشه 169.

"Everything new brings joy: everything old brings repulse."—The new broom expels the old.

#### احفظ عتيقك جديدك ما بيبقا لك 170.

"Preserve thy old; (for) thy new will not last thee."— Opposed to the former. In Syria also these sayings are in pairs.

#### قلبه من الحامض لاوى 171.

"His stomach from (eating) sour things is crude."—Said when trouble (or business) comes upon trouble, etc.

## كثير الغلبة راح ليجهتم قال العطب اخضر . 172

"Much meddling went to hell (and) said, 'The fuel is green' (there)."—Of course it is useless to tell those there what the state of the fuel is. Ghalabah is mostly applied to excessive talking, e.g., Lá takassar el ghalabah! in Persian, Fuzuli ma-kun.

#### من ذكرني بَغطمه كنت عنده عظيم . 173.

"He who remembers me with his bone, honours me with his bone."—Meaning, he shows that he remembers me. The play of words is upon Azm and Azim; induh kalb azim is said by the baser sort.

"Seek the good of thy neighbour, and thou wilt find good at home."—Benefit yourself by benefiting others.

"He is no good; neither to the guest, nor to the sword, nor to the treachery of time."—Said of a man utterly worthless.

#### نفع ما منه دخانه بيعمى 176.

"There is no profit from him, and his smoke blinds."— Spoken of one utterly worthless, and harmful withal.

"If Yais be thy cook, take no thought of thy squeamishness."—Yais was a notoriously unclean cook, who put too much water in his *marak* ("kitchen"-pound on rice, etc.). The saying means expect no good from a bad workman.

"The number of cooks burn the food."—"They spoil the broth," as we say. A similar proverb is, Kisrat el ruasa bey agharsik el markab, "Too many captains sink the ship."

"The key to the belly is a bit (to eat, a mouthful), and the key to quarrel is a (hot) word."—Used when people are to be dissuaded from quarrelling, or when persuading them to eat.

"Your (hell) fire, and not another man's heaven."—Meaning, I prefer a poor gift from you to a rich one from another.

#### وعيل الكبيريساع الصغير 181.

"The big vase contains the small one."—That is to say, "Be patient, you are a greater (or wealthier) man than he is."

لا بد يذوب الثلج ويبان الوخم 182.

"The snow must certainly melt and show the filth" (also is). Spoken of a man who makes much fuss about business of no importance.

مثل دجاج داريا بيترك القمحة وبيأكل الخريه 183.

"Like the hen of Dárayá (village) that leaves the wheat and eats the filth," which explains itself.

#### القثاية عوجة 184.

"The cucumber is crooked."—Meaning, you can't make the cucumber straight, or the liar a truthful man. So they say, Zanab el kalb aawaj wa lau hattuh alf sanat li'l kálib, "The dog's tail is crooked though you put it in the mould for a thousand years." Applied to bad government, etc.

#### ما شفت ولا قشعت ولا بعرف ما شفت

"I have not seen, and I have not perceived, and I don't know."—It is said that this is the first sentence of the catechism taught to the Jewish child at Damascus.

## كل فعل جائز وكل مطلوب حرام 186.

"All (things) done are lawful; all (things) asked for are unlawful."—Used when encouraging a man to act upon his own responsibility.

#### مثل خورى عين طينه 187.

"Like the priest of Ayn Tinah." They relate that the parishioners having complained of their tyrannical parson to the Moslem authorities, found him sitting amongst and in high favour with the latter. A kind of Vicar of Bray. Said of one from whom you cannot escape.

ART. XVII.—Notes on an Ancient Indian Vase, with an Account of the Engraving thereupon. By Charles Horne, F.R.A.S., late of the Bengal Civil Service.

This curious and, I believe, unique relic of antiquity is in the form of an ordinary Indian lotah, and measures as follows: Total height,  $6\frac{1}{4}$  in.; diameter,  $5\frac{1}{2}$  in.; ditto at neck, 2 in.; with a projecting circular lip of  $\frac{1}{2}$  in. It is apparently wrought in some fine alloy of brass, copper, and spelter (?), the brass prevailing, and has resisted corrosion in a very remarkable manner; for the date which I would, from external evidence, assign it is between 200 and 300 a.d. It has evidently been treated with the greatest care; for we do not find upon it any signs of the constant polishing with sand and ashes which the lotahs of the natives undergo when in constant use, and which in a few years wears them quite thin.

Before I enter upon any description of the engraving upon it, I may as well mention how and where it was found. 1857 Major Hay, then in Political employ in the Kûlû country, which comprises the districts of Lahoul and Spitî, in the Himâleh, happening to be near Goondlah, heard that some curious ancient vessels had been found near the junction of the Chandra and Bhagûr rivers not far distant. It would appear that upon the spot had formerly stood a Buddhist monastery, and that owing to a great landslip a vaulted chamber or hollow had been laid bare, in which were found this brass vase, and some dishes of kassa, or mixed metal. There were some, doubtless, of the more precious metals, but these had disappeared before Major Hay could reach the spot. He was, however, fortunate in being able to secure the object now under notice, which he has kindly placed in my hands for description, and that, if possible, it might find a resting-place in some museum.

The whole of the exterior, with the exception of a part of

the neck, is covered with engraving, effected with a graving tool or fine chisel. The upper part is occupied with six spaces of geometrical ornament running around it, consisting of crossings, lines, circles, and the like. This may take onethird of the space, whilst the lower two-thirds are filled with

a spirited representation of a royal progress.

We have first a young prince in a chariot or car drawn by four horses abreast, attended by his chowrie-bearer (a female) and his charioteer. The style of the chariot and the drawing of the steeds, perspectively, is most decidedly Greek; whilst the harness of the latter is very peculiar, and I have not been able in any work to meet with similar headstalls or bridles. In the sculptures from Amravatî there are many harnessed horses, but all their headstalls are square in character; as are those from the Nineveh sculptures. The passing of the reins through a "terret" or ring on the withers of the horse exactly resembles the manner of the Romans, as well shown in a plate in Hope's "Costumes of the Ancients," as does the breastband before alluded to. In the Nimroud sculptures the horses' heads when abreast only just project before one another; but here we have nearly half the shoulder visible. There is no slavish conventualism, and the horses of the mounted men are each in a separate attitude—the one prancing with arched neck, whilst the other is trotting very high. In no case have they any martingale, although almost every horse at Sanchi is shown as having one. The breastbands are set with large studs, probably bosses of metal; whilst the crupper strap is also shown to be ornamented. A large tassel hangs from the shoulder at the junction of the ornamented girth and the breastband. The manes appear to be plaited, and the tails of the chariot horses tied up; whilst those of the steeds of the horsemen are flowing free, being combed out.

Whilst on the subject of the horses, I would draw attention to the representation of colour, both of the riders' horses being fleabitten or grey, whilst those in the chariot appear to be pure white. On the head of one is manifestly a grand plume of feathers, and on the other a strange kind of ornament, with backward flowing streamers, surmounted by,

perhaps, the tied-up top-knot. The horses all appear to be stallions. But the most curious point is the introduction of stirrups. These are either of rope or of bamboo, but most probably of the latter, from the stiffness with which they stand out.

Even in so small a matter as this is the skill of the artist shown; for in the prancing horse the foot pressing heavily bends the stirrup to its shape, whilst in the case of the trotting one the foot lightly placed does not spoil the curve

of the bamboo or rope.

The saddle-cloths do not cover any saddle, and are, doubtless, ornamented pads, which are even now much used in the East. No girths are shown in the drawing. In the Sanchi representation, all the horses are saddled, although nowhere are stirrups to be found. The Greeks and Romans, as far as my knowledge extends, did not use them, for I have never seen them figured; although, perhaps, on the same principle that the nude was preferred to the highly-clad figure for representations, the horses were drawn as far as possible without trappings, as in the Elgin marbles.

The action of the animals is well represented when we consider the rough tool with which the incising has been effected. They have a large tassel hanging at the ear, and a species of horned erection of, perhaps, plumes on the forehead or top-knot, as has been used for State by all nations in all ages. Each is driven with two reins, four being held in one hand by the driver, and four in the other. chariot is of a rather uncommon form, very large, and has none of the angularity so general in those of Greece and Rome. From the marking it almost looks as though the upper portion was made of basket-work. The front is ornamented by perpendicular lines of work, probably of wood; and there is a hand-rail upon which the young prince is leaning. It, however, much resembles in its general form one represented in Plate xxxiv. of Tree and Serpent Worship, from the bas-reliefs at Sanchi; and still more so one spoken of as the only one at Amravatî, and figured in Plate lxxvi. of the same work. This, however, has only two horses.

There is no connexion between the reins and the mouths of the horses, but the arrangement represented would seem to imply some species of bit. These were, doubtless, in use at the time to which I would assign the work, long after the time of Arrian, whose remarks are quoted by Mr. Fergusson.

Over the prince, held in the left hand by his chowriebearer, is a very large umbrella of bamboo, neatly made, presenting no peculiarity, but very much resembling those now in use in most parts of the East. He wears no clothing above the waist, except a light scarf thrown over the shoulders. whilst the lower part of his body is covered with a dhotî, or waistcloth, as far as can be seen; neither has he any ornaments on his arms or wrists. Around his neck is a mala, or necklace, made of gems, probably of amber or turquoise, of the shape of truncated cones strung transversely through the thick end, and he would appear to have had his ears lengthened and split, as in the order of his kamphati, or, perhaps, caused to present that appearance, in consequence of the former wearing of heavy earrings, now abandoned, as we so often see in figures of Sakya Muni. Some may, however, hold that the elongation represents rings worn in the ear. I, however, think that they do not. He appears to have no head-dress, but merely his long locks twisted up into masses around his head in a neat manner.

At his left hand stands his charioteer, a character often alluded to in the four predictive signs shown to Sakya before he finally left the Palace at Kapila! This person, whether male or female, for there is little to distinguish the sex, and the dress and ornament rather seem to indicate a woman, may possibly be his wife Yasodavâ. He (or she) appears to be speaking to the Prince, who looks sad and thoughtful. He wears heavy bangles, a necklace much resembling that of the master, and immense lobes or earrings almost reaching to the shoulder. Besides this, he has a fine gold chain, similar in character to that worn by the musicians, which rather favours the presumption of the charioteer being a female. A grand Turkish turban crowns his head, such as Bishop Bigandet speaks of as being worn by men at the time of

Sakya in his Life of Gautama. As before stated, four reins are held in each hand, and the right also carries a long stiff

whip without any lash.

Behind the Prince stands a female attendant, with the large umbrella supported with her left hand, whilst the right grasps a chowrie, or fly whisk of hair. She wears the same prodigious lobe or ear ornaments as the charioteer, with similar bangles on her wrists. Her hair is most elaborately done up in two horns, with a streamer coming through the midst of each erection, and hanging down far below the waist, whilst many (five are shown) others float on the breeze from the back of the head. Her body is bare to the waist, as was common at the date to which I would attribute this vase; whilst below, a sart, or petticoat, tightly girt round the hips, flows freely by reason of the rapid motion of the vehicle.

The whole forms a very complete and carefully drawn

group, and tells its story quite graphically.

It might well represent Phralong when he saw the first of the four "signs" as he drove to his gardens in state, with his four beautiful white horses, accompanied by guards and musicians.

Immediately behind the car rides a horseman wearing no ornament whatever. He has long slit ears, with his hair curiously twisted up about his head, and a light scarf over his shoulders, the ends of which stream behind him. Below this is a *dhoti*, or waistcloth, which completes his clothing.

In his right hand he carries a very curious highly-finished weapon, somewhat resembling a halberd, consisting of a long staff tipped with a spear-head. A little below the head on one side is a sharp projecting recurved instrument like a reincutter; and on the opposite side, still lower down, is an axehead. I have in my researches found one or two representations of a spear with an axe on one side of the staff, but never one with this strange hook, which cannot possibly be used as an ankus, or elephant goad, the staff being too long. There are some celebrated tridents, one in Gurwhal, 21 feet high, which has the axe-head on one side; and another at

Gopeswarâ, 16 feet high, with a similar appendage, which slightly reminds one of the Roman fasces carried by the Lictors; and upon a Bactrian (?) coin, shown me by Mr. E. Thomas, we found a weapon possibly similar, but very indistinct. The handle is neatly finished off at the bottom, and the weapon would seem to be one of the State insignia.

The second horseman has rings in his ears of a moderate size, and a scarf of another pattern, wearing only a *dhotî* in addition by way of clothing. His head is, however, covered by a handsome turban, unless, indeed, his hair is so neatly done up as exactly to resemble one, which I much doubt. He is closely followed by another Prince, or noble person, mounted on an elephant, which steps nimbly along. A male attendant sits behind him on the pad or *guddî*, for there is no howdah, the elephant being very small, holding an umbrella over him of exactly the same character as that used by the principal person, with his left hand, whilst in his right hand he grasps a *chowrie*, or fly whisk, with which he fans his master. As it is, he sits in a most uncomfortable position, and it is not clear how he balances himself.

The driver of the elephant, evidently some great man, has elongated slit ears, without earrings, like the Prince, one of the horsemen, and another attendant not yet described; and the same wild arrangement of hair as the second horseman and the chief Prince. The scarf, necklace, and dhoti are all the same. In his hand he carries a very long ankus, or goad, and he wears no bracelets. The elephant he bestrides, which is evidently reduced in size for the sake of the picture, has short ears with a prodigious trunk, which is adorned with lines of paint, and a frontlet carrying bells, which comes over the ears at the side of the head. His tail is tied up very curiously by a rope under the belly to the head. This is often done to prevent its being moved when one is getting on to the beast's back thereby, at the present day; and it would almost seem to indicate that this was a portrait of an elephant which needed to be so treated. The arrangement of the hair of the attendant is different from that of any other person in the

<sup>1</sup> Vide J.A.S. vol. v. p. 482.

picture, and two short streamers hang down from it behind. These streamers deserve a word, for they are probably the same as the ornament carried in the hand of the priest, the utpala padma, or "water-lily jewel and tree leaf put together in the form of a nosegay," mentioned by Alexander Csoma Kôrôse, in J.A.S. vol. vii. p. 143, marking the subdivision of Buddhism, to which the people belonged, viz., the Rahula (sgra-gchan-hdsin), the son of Sakya, and helping to fix the date as very early. This man also probably wears earrings of no great size, and hence not very distinctly portrayed.

Following the elephant is a priest or Sramana of some rank, holding in his left hand the ornament above described. The right side certainly, and probably the whole front of the head, is shaven, as shown by the little bristles; whilst the hair from the back is made up into two great rolls, and brought forward on the left side. The slit-elongated ear also marks this man, who has not an article of ornament upon him. He wears the scarf and the long flowing dhoti, and,

like all the others, goes barefooted.

Behind him come the two female musicians. Their dress is rather difficult to describe. Around their heads are fine turbans with flowing scarfs and pendent ornaments, above described as the utpala padma. They wear prodigious earrings or lobes, almost resembling dice-boxes, and reaching to their shoulders. (How these were suspended is not very clear, although the elongation of the ears may account for this in part.) They also have necklaces of amber or turquoise strung transversely like those of the men, heavy bracelets or bangles, and anklets. These last-named lie loosely on the ankles. They each have in addition a fine gold chain round the neck, which falls naturally between the fully-developed breasts, as in the dancing girl of the Bhilsa Topes, so ably figured in Gen. Cunningham's work; and they are nude to the waist, below which, and reaching to the ankle, is worn a very thin and transparent striped sari, or petticoat, fastened at the hips with a band and buckle, and scolloped in its lower edge.

The former of these women plays upon a vina, or lute, of a very curious shape, held horizontally, but somewhat resembling one in the plates of carvings at Amravatî (Plate lxxii. fig. 1, Fergusson's Tree and Serpent Worship). It also slightly resembles the Egyptian form. I have, however, not been able to meet with its exact counterpart.

The second is well represented as performing on a very long and peculiar flute, projecting at either end. Her attitude and fingering of the instrument are very good; and I tude and fingering of the instrument are very good; and I have not been able anywhere to find a similar flute. Its length is from four to five feet!

All the space not occupied by the drawing is filled in with Buddhist emblems, such as small circles, chakras or wheels, buddhist emblems, such as small circles, chakras or wheels, vessels, flowers, the sun, fruits and boughs, giving it a particularly rich effect. Amongst these, the vessels are curious, ticularly rich effect. Amongst these, the vessels are curious, as being of exactly the same shape as those at present in use amongst the natives of India; thus showing how little the modern Hindus have changed their forms and patterns from of old.

of old.

The lips of the vessel are engraved all round with geometrical patterns formed of lines, and are much broken. The vase is also cracked. It was, I am told, in this condition when found; but I also heard that Gen. Cunningham had broken off portions for analysis, the reports of the result of which I have not able to obtain.

The metal must, however, have been very pure, or it had never resisted corrosion as it has done.

It is well known that, from very early times, and probably during the Gûpta period, Buddhist erections stood on the spot where the vase was found, which buildings have long since gone to ruin, the spot itself being now held sacred to Trilôknâth; whilst there can be no doubt as to the authenticity of the relic, of its being of very great antiquity.

The absence of Janaôs or Brahmanical threads, as well as of all teekas, or caste marks; the costumes of the parties, both men and women, nude to the waist; the arms and musical instruments—all point to a very early date.

Greek art had by this time permeated that part of the country, having had its head-quarters at or about Peshawur; and I see nothing in the subject to lead me to fix a later date

than about 200—300 A.D., or during the Gûpta dynasty. The drawing appears to me to indicate a period somewhat earlier than that of the carvings on the Sanchi Topes; and although I am of opinion that the scene represents Sakya himself, I am bound to admit, there is nothing in the group which might not be held to apply to any other prince of the period referred to. Many of the details distinctly point to that time, such as the flower ornament held by the Sramânâ, and before described, the emblems, etc.

The drawing is fine, bold, free, and spirited; and it is much to be desired that this very interesting specimen of ancient work should be deposited at the India-house Museum, where all might see and study it. There is no inscription of any kind upon it to fix the date, so that my approximation refers rather to the date of the scene represented than to the manufacture of the vase itself. They may have been later, and the subject a reproduction of some well-known picture.

The photographs which accompany, and which need no special explanation, are executed by Mr. Griggs, of Peckham, the one from the vase itself, and the other from a larger drawing, by an artist, of the royal procession.

ART. XVIII.—The Bhar Tribe. By the Rev. M. A. SHERRING, LL.D., Benares. Communicated by C. Horne, M.R.A.S., late B.C.S.

(Read December 4th, 1871.)

This race, variously known by the terms Râjbhar, Bharat, Bharpatwa, and Bhar, once inhabited a wide tract of country extending from Gorakhpur in Northern India to Saugor in Central India. Other tribes, such as the Cherûs, the Majhwars, and the Kôls, were, in places, associated with them, or contiguous to them; but there is good reason to believe that the Bhars greatly outnumbered them all. They were very powerful in Oudh; and the country lying between Benares and Allahâbâd, on either side of the Ganges, a tract of about seventy miles in length, was almost exclusively in their possession. The entire district of Allahâbâd also was originally in their hands, and traces of them are still to be seen in every pargannah, more especially in those situated across the Their forts there, called Bhar-dîh, Ganges and Jamna. some of which are of vast size, are very numerous; and they have the credit of having excavated all the deep tanks which now exist. The pargannah of Khairogarh bears very abundant traces of their toil and enterprise. The stone fort of that name, of immense proportions, is said to have been their work.1

In the district of Bandah, on its eastern side, are extensive hill forts, which Dr. Wilton Oldham, formerly Assistant Magistrate of that district, informs me are of Cyclopæan dimensions, and are attributed to the Bhars. In particular, he mentions Lukwa, situated in the Chîbû pargannah.

Vestiges of this race are found in many places in the districts of Mirzâpur, Jaunpur, Azimgarh, Ghâzipur, Gorakhpur, and in the province of Oudh, where numerous embankments, tanks, subterraneous caverns, and stone forts, still exist, and

<sup>&</sup>lt;sup>1</sup> Report of Revenue Settlement, Allahâbâd, vol. ii., part i.

testify to their energy and skill. The present inhabitants of Azimgarh have a tradition that their country, in the time of Râm, with whose kingdom, Ayodhya, it was formerly connected, was occupied by Rajbhars and Asûrs. The Bhars have left behind them large mud forts, of which specimens may be seen at Harbanspur and Unchgâon, near the town of Azimgarh, and also at Ghori. The Kunwâr and Manghai rivers of the district seem to have been connected by a trench, called Asurâin, the work, it is said, of its primitive inhabitants. The Hari Bândh, or dam, at Amîn-nagar, in the Nizâmâbâd pargannah, is an embankment generally ascribed to them.1 The Bhars once possessed the northern portion of the present district of Ghâzipur, now divided into the pargannahs of Shâdîâbâd, Pachotar, Zuhûrâbâd, while another occupied the fort of Laknesar-dîh, the deserted village of Laknesar.2

Yet the race, in association with other aboriginal tribes, was not confined to this united tract, but was once spread abroad in various directions in that part of the country. "The Hindu land-owning tribes," says Dr. Oldham, "all agree in stating that at the time of the first immigration of their forefathers, the entire country-except a few tracts held by Brahmans so far as the forests had been clearedwas occupied by aborigines, not of the Aryan race, who were in the habit of eating the flesh of swine, and using intoxicating drinks, and were called Secrees, Bhars, and Cherûs."3 This tradition is current, says the same writer, throughout the Benares Province, Oudh, and Behar.

How far the extensive District of Gorakhpur was occupied by the Bhars is uncertain. We know that the Kansik tribe of Râjpoots ousted them from a portion of their territory, and retain possession of it to the present day.

Respecting the Bhars of Oudh, Mr. W. P. Carnegy, Deputy-Commissioner of Fyzâbâd, remarks that the ruins of their former masonry forts are to be traced by scores in

Settlement Report of the Azimgarh District, vol. i., sec. 23, 24.
 Dr. Oldham's Memoir of the Ghâzipûr District, part i., p. 46.
 Dr. Oldham's Memoir of the Ghâzipûr District, part i., p. 46.

our districts, and the name of their former capital, where they were finally overthrown by the Mahomedans, after being, according to popular tradition, artfully plied with spirits, was Kasbhawanpur, the modern town of Sultânpur, destroyed by us after the re-occupation of the province."

The Bhar raj, or dominion, included the whole of Eastern Oudh. Every great natural work or ancient relic there is attributed, says Mr. C. A. Elliott, in his Chronicles of Oonao, either to the Devil or the Bhars. He states, moreover, that "almost every town whose name does not end in pur, or âbâd, or mow, or is not distinctly derivable from a proper name, is claimed by tradition, in the east of Oudh, as a Bhar town. The district of Bharaich is (if we may trust its traditions) their oldest abode, and the name of the town of Bharaich is said to be derived from them. From thence they spread southwards through the districts of Fyzâbâd and Sultânpur, and it is in the latter district that they maintained themselves latest, being only finally extirpated in the reign of Alamgir. It is said that some of their number may be found there even now, living a wild gipsy life in the jungles."2

The district of Mirzapur exhibits traces and remains of this people to a greater extent than of any other tribe. The pargannah of Bhadohee, or more properly Bhardohî, is called after them. Mr. Duthoit, late deputy-superintendent of the family domains of the Maharaja of Benares, in his recent elaborate report on this pargannah, says that traces of the Bhars abound on all sides, in the form of old tanks and village forts. "One cannot go for three miles in any direction without coming upon some of the latter." Their tanks are Suraj-bedi, that is, longer from east to west than from north to south; and thereby distinguishable from modern tanks, which are Chandr-bedi, and lie north and south. The bricks found in the Bhar-dîhs, or forts, are of enormous dimensions, and frequently measure nineteen inches in length, eleven in breadth, and two and a quarter in thickness. In

<sup>Mr. P. Carnegy's Races of Oudh, p. 22.
Chronicles of Oonao, p. 26.</sup> 

quality and size they are similar to bricks often seen in

ancient Buddhist buildings.1

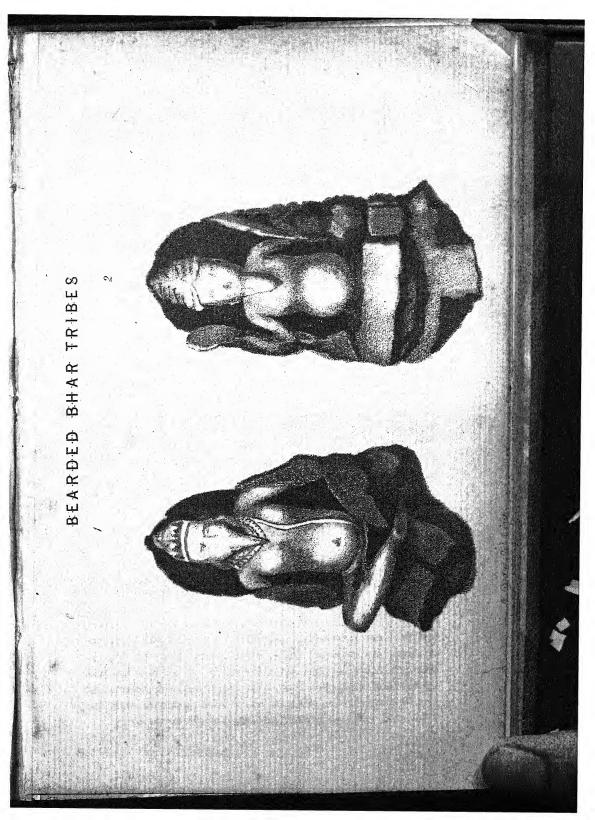

This pargannah stretches along the north bank of the Ganges; yet on the south side of that river, likewise, Bhar forts and towns are met with. One of their principal cities was situated about five miles to the west of the modern city of Mirzapur, and was evidently of great extent. Its brick and stone débris is scattered over the fields for several miles. This old city is called Pampâpûrâ by the people now living in the neighbourhood. It is probable that the original name has been lost, and that this name was given to it by the Rajpoots who took the country from the Bhars. From its size, and the substantial nature of the buildings which, judging from the relics, it contained, the city must have been of sufficient importance to be the capital of the country. It included within its circuit the ancient town of Vindhyachal, famous in the Purânas, and still celebrated throughout a great part of India for its shrine of the goddess Vindhyeswarî, which many thousands of pilgrims from every quarter visit yearly. To the east of the town are the remains of the fort, from which spot, in a westerly direction, débris is found in great abundance.

Tradition says that the city once possessed one hundred and fifty temples, all of which were destroyed by that indomitable enemy of idolatry, the Emperor Aurungzebe. This is perhaps an exaggeration; yet that there were formerly magnificent temples on this spot is indisputable. Below the Ashtbhûjî bungalow, a sanatorium erected on a spur of the ridge immediately above the site of the ancient city, by a public-spirited native gentleman of Mirzâpur, for the especial benefit of its European residents, is a massive square building, having the appearance of a fort. It is, however, a Hindu monastery, with a temple on its summit, reputed to be of some sanctity. This edifice has in its walls, breastworks, and foundations, a multitude of carved stones and figures, while many more cover the ground in its vicinity. The sculptures found here, and elsewhere in many

<sup>1</sup> Report on the Bhadohee Pargannah, p. 2.

places among the outlying fields for a great distance, are not of modern Hindu style; indeed, in point of design and skilfulness of execution, are far superior to the productions of Hindus of later times. Some of the figures are of that curious type described, hesitatingly, by  $\bar{\mathrm{Mr}}$ . Fergusson, in his "Tree and Serpent Worship in India," as Dasyas, or aborigines, in contradistinction to the immigrant tribes of Hindus. They are readily distinguishable by their peculiar head-dress and long pointed beards. They constitute, however, but a small portion of the figures, which are for the most part representations of Hindu men and women, with most elaborate turbans and head dresses, while exceedingly few apparently are of a sacred character. It is probable that nearly all these relics point to a later period of Bhar history, when Hindus had come and settled among them. The contrast between the long-bearded figures and the Hindu figures is very striking. It is questionable whether at the date of most of these sculptures the Bhars were still in possession of the country; indeed, I am inclined to the supposition that it had in part, or in whole, already passed from them into the hands of the Rajpoots, who are known to have been the rulers over this tract for a period of five hundred years. At the same time, the position and attitude of the Bhar figures on these sculptures indicate that at the time of their execution the Bhars were still a people of importance. It is right to add, however, that a few of the sculptures, yet only a few, represent the Bhars as the superior race, and attached to the Buddhist or Jain religion.

My friend C. J. Sibold, Esq., of Mirzâpur, has made an excellent collection of sculptures from the numerous remains at Pampâpûrâ, from which a few admirable drawings by a native artist have been selected for description. I have chiefly chosen those which exhibit the bearded figures. Some of these are evidently of a sacred character. It will be observed that the cast of countenance of all the bearded figures is of a peculiar type, differing considerably from the Hindu countenances, with which, in some instances, they are associated, and also from Hindu faces of the present day.

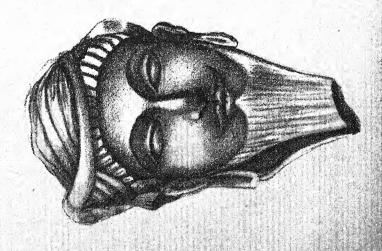

10

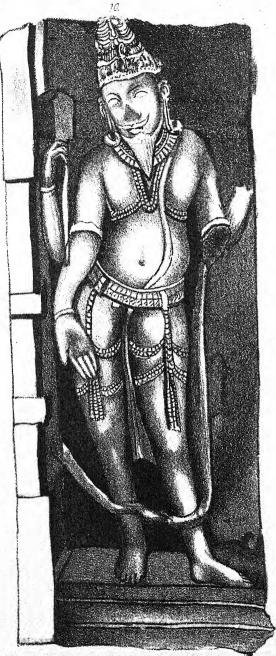

O

W. Griggs, Del & Till.

W. Griggs, Del & Lith.

10 1/2 inches from lower edge of chinito middle of forehead 1 foot 5 inches from inner point of one car across the bridge of the nose to inner part of the other car. 1 foot 3 12 inches from lower part of head dress to the apea. 2 feet 3 inches from lower edge of chinito the apea of the head dress. Figures Nos. 1 and 2 are probably Bhar Râjas; the same may be said of the bearded figure No. 3: the other figures in which are of a Hindu cast. Moreover, while the Bhar is seated, and occupies an honourable position, the Hindu to the left is standing, and is probably an attendant. The sharply-pointed beards of the Bhars in most of these sketches are very curious, being altogether unlike anything seen among the natives of India of modern times; their head-dresses, too, are singular—the lower part of that of No. 1 looks like a crown.

The bearded figure in No. 4—judging from his elaborate turban and long earrings—is a person of some distinction. His short beard has the appearance of a neckerchief. The artist has, I suspect, hardly caught its true expression; the Hindu attendant is presenting something kneeling. In the compartment to the left, the figure with a Hindu countenance is seated cross-legged; it is four-armed, and therefore a deity, perhaps the household god of the Bhar chief. If this be so, it shows that the sketch represents a period when the Bhars worshipped Hindu idols.

Figures Nos. 5 and 6 seem to be at their devotions: one has his hands united together open, according to the fashion adopted by Hindus now-a-days, as expressive of adoration or obeisance; the other has one elbow resting on hand. But we are not left in the dark either as to the act of worship or as to the object reverenced. No. 5 occupies a lower niche of a series of sculptures, the most prominent of which is a large and well-defined figure of Buddha seated. The head of this figure, which has not been figured, is manifestly of a genuine Buddhist type, with curly hair and nimbus. Moreover, it has the conventional elephant depicted to the right above, so frequently found in ancient Buddhist sculptures. An interesting question is thus incidentally started, namely, what was the primitive religion of the Bhars? In the instance before us, Buddha is the object being worshipped. If such is the case, we are carried back to a period before the Râjpoots had arrived with their Hindu deities, and had induced the Bhars, whether by fair means or foul, to

embrace Hinduism, as, from information derived from some of the sculptures, we have every reason to suppose they

subsequently did.

Figure No. 6 is in contemplation. He is not a devotee, as some might perhaps be inclined to imagine; for he has several bracelets and armlets on his wrist and arm; nevertheless, it is probable that he is religiously employed. Figures Nos. 7 and 8, display a considerable difference of head-dress. Their physiognomies are not of a Hindu type; the second has his beard closely cut, though still well defined. The head, No. 7, is remarkable for the size of its earrings. The small figure, No. 8\frac{3}{4},\* has a head-dress, and what seem to be side-ornaments, different from all the rest. In appearance he is worshipping a round object before him on a low altar. Is it a relic casket?

The central figure in No. 9, compared with the remaining figures, is of colossal proportions. Being headless, it is impossible to speak about it with precision. The stumps of its four arms indicate that it was a divinity, but of what religion? The elephant and deer were sacred animals with the Buddhists, and are very frequently found on their sculptures. The four arms, however, seem to point to a Hindu deity. Of the thirteen subordinate human figures, the three upper ones are beardless, and most likely represent Hindus. of these are worshipping the central figure; the ten lower figures have all pointed beards, and present a great similarity of physiognomy. Those in an erect posture are perhaps intended to represent priests, or, it may be, men of rank in attendance on the god; one of them holds in his hand a flag, and another grasps a kind of club. All have on their heads a high conical cap or turban. The four-headed personages seated below display a very different style of head-dress, and seem to be of a humbler position in life. It is remarkable that the erect figures and the divinity also are adorned with what has the appearance of the sacred thread, while the sitting figures above and below are destitute of it. The Bhar figures, Nos. 1 and 4, have the thread also; but Nos. 2 and 3

\* Not figured.

are without it. I am at a loss to explain this very singular circumstance. My own impression is, that the Bhars learnt the custom of wearing the thread from the Râjpoots who came amongst them. But this must have been done before the Bhars were subdued, and while the Râjpoots were mere servants to them; for it is hardly likely that the Râjpoots, after they had subjugated the Bhars, would have suffered them to wear a sacred badge which only Hindus of good caste were permitted to assume.

Figures Nos. 10 and 10½\* are four-armed divinities, yet they exhibit the Bhar type of countenance, seen in Nos. 8 and 9; their conical caps and pointed beards are much like those observed in the erect figure of No. 12. Both are decorated with the sacred cord. The figure to the left is four feet four inches in height. The other has a massive jewelled ornament on the upper part of one of his left arms.

The sitting figure, No.  $10\frac{3}{4}$ ,\* with four hands, is, I suppose, either intended for Buddha, or for one of the twenty-four subordinate divinities of the Jain religion. The hair is gathered up into a knot and tied by a fold. The double-beaded garland over the chest, passing round the waist, must not be confounded with the sacred thread.

No. 10½\* presents the head of Buddha, already referred to. The entire figure seated, together with various emblematical figures on the sides and base, is a beautiful specimen of ancient sculpture. From the circumstance that one of the Bhar bearded figures of this series occupies a niche at the base of this sculpture, there is good ground for supposition, as already remarked, that the ancient Bhars were, to some extent, Buddhists.

It will be readily perceived that the beautiful figure No. 11 displays a very different countenance from any of the Bhar figures described above. I believe it to be a likeness of a Gaharwâr Râjpoot, probably of a chief of the family that took possession of the Bhar territory of Kantit. The conical head-dress is of the same description as that worn by Bhar chiefs in the sketches already noticed, but is more ornamented

and magnificent. The figure is a divinity, as is manifest from the third eye set in the middle of the forehead, and represents, very probably, Sheva as Trilochau, or the Three-eyed. As a specimen of art the relic is worthy of study. It is of colossal size, and originally belonged to a statue

some ten or twelve feet in height.

Mr. Woodburn, Settlement Officer in Oudh, in his Report on the Mangalsi pargannah of the Fyzâbâd District, has some interesting, though somewhat fanciful, observations on the nature and use of the Bhar forts in that part of Oudh. "Bhar forts, as they are called, are common in the pargannah. They are in general simple rounded mounds, more or less lofty, strewn with broken brick. The mounds appear to be in the main artificial, and their area is never large. If the dwellings of the Bhars were confined to the mound, the population of that day must have been very scanty. This is hardly consistent with the revenue returns of Akbar's reign for the neighbourhood; and yet, according to the corroborative accounts of the Rajpoot tribes, the Bhars were dominant till Akbar's time. Impressed, however, with that idea, and feeling it hard to believe that a small population, living on an exuberant soil, could have lived in a state of constant strife, I conceived that the mounds were possibly constructed as a sanitary precaution against the malaria of a region of marshes and forests. The theory is scarcely justified by the position of some of the mounds with which I became acquainted. But, however this may be, there can be no doubt a great change has taken place in the habits of the people since the days of the mound-makers. Brick strongholds have been succeeded by clay huts; and, as in the case of Kalâparpur (where there is a Bhar fort), the people have formed the notion that evil and misfortune haunt the dwellingplaces of their forerunners. It is strange how the name of the Bhars should have adhered to places that now know them no more."

That the Bhars were not a barbarous race, but were partially civilized, is sufficiently proved by the numerous works of skill which they have left. Their massive forts, found

throughout the country which they once inhabited, testify to their warlike propensities; yet they were probably erected chiefly as means of defence and as places of refuge: for in their later history it is certain they were exposed to fierce attacks from their Rajpoot neighbours. The same energy and talent which they exhibited in defending themselves against their enemies they also displayed in more peaceful pursuits. Whence this people obtained their civilization. which placed them much above the condition of many other aboriginal tribes, it is hard to say, unless we suppose that it had its origin in themselves. I know not why we should be so ready always to ascribe all the ancient civilization of India to successive troops of Hindu immigrants. The more I investigate the matter, the stronger do my convictions become, that the Hindu tribes have learnt much from the aboriginal races: but that, in the course of ages, these races have been so completely subdued, and have been so ground down by oppression, and treated with such extreme rigour and scorn, that, in the present condition of abject debasement in which we find them, we have no adequate means for judging of their original genius and power. Mr. Thomason, late Lieutenant-Governor of the North-Western Provinces, in his Report on the Ceded Portion of the District of Azimgarh, says of the Bhars and the tribes associated with them, "The inhabitants of the country, by whatever name they are distinguished, were a powerful and industrious people, as is evident by the large works they have left behind them."1

How long prior to the Râjpoot invasions the Bhars had occupied this tract of country cannot be ascertained; yet the prosperity to which they had attained and the civilization they had acquired are sound reasons for thinking that they had held possession of it for a protracted period. Six, or at the most seven, hundred years ago, the whole of the Benares Provinces, a large portion of the Province of Oudh, and perhaps a considerable portion of outlying territories, were beyond all dispute chiefly in the hands of the Bhars and other aboriginal non-Aryan tribes. The fall of Kanouj and

<sup>1</sup> Mr. Thomason's Report on the Ceded Portion of the District of Azimgarh, p. 13.

Delhi at the end of the twelfth century set free the great Râjpoot families, and sent them wandering all over the country in quest of new homes. These came in contact with the aboriginal tribes, and either subdued them at once, or, as was probably more frequently the case, obtained employment and lands from them in the first instance, and afterwards, as opportunity served, by degrees seized their possessions, overthrew their owners, and expelled them. This process was a long or short one, according to circumstances. In some instances, several hundred years elapsed before the end was gained. Yet finally the same conclusion

was attained everywhere.

The traditions of all the land-owning tribes of the tracts referred to accord with these statements, bearing united testimony to the fact, that a few hundred years ago the middle Ganges valley was occupied by non-Aryan aboriginal The history of the period preceding the Rajpoot immigrations is partly historical and partly conjectural. During the prevalence of Buddhism in Northern India, the Aryan races appear to have been everywhere dominant. Some of the aboriginal tribes blended with them, though to what extent is uncertain. As Hinduism began to re-assert its authority and claims, on the decay of Buddhism, a fierce struggle seems to have arisen between the two religious factions. Yet how far the Aryans had cultivated the soil and spread themselves out into villages and towns is, strictly speaking, unknown. Whether, indeed, the country was well or only scantily populated is equally uncertain; most probably the latter supposition is the correct one. This, however, is tolerably clear, that the aboriginal tribes were in a subject condition. We have trustworthy information respecting the kingdom of Benares and a portion of that country of which Ayodhya was the capital. They were governed by Hindus. Both were originally chief seats of Hinduism; afterwards, in both places, Buddhism was very powerful; and, lastly, in both kingdoms Hinduism became once more in the ascendant. Nevertheless, the Aryan race, in its tremendous efforts to shake off the Buddhist creed, greatly

enfeebled itself, and was consequently unable to cope with the aboriginal tribes, which, taking advantage of the religious and political strife which was destroying the life of the Hindu nation, endeavoured to regain their ancient lands, from which, ages before, they had been driven away into the forests and mountains.

The remarks of Dr. Oldham respecting the district known by the modern name of Ghâzipur are equally applicable to the whole of the Benares Provinces. "On the downfall of Buddhism in this part of India, the distinction between the Aryans and the aborigines became as marked as ever. The former, weakened by their internecine war, were unable to hold the country; the latter, removed from the civilizing influences to which they had been subjected, relapsed wholly or partially into barbarism; and hence it was that this district, which thirteen hundred years ago formed an important part of a civilized Aryan monarchy, eight hundred years ago was under the sway of a number of petty semibarbarous aboriginal chiefs, and had a very small Arvan population; while, on the other hand, the upper valley of the Ganges was filled with a teeming population of Hindus. who were in a position to send out colonies even before the coming of the Mussulmans, but who on their coming were compelled to do so." In this passage Dr. Oldham, I think, somewhat under-rates the civilization of the aboriginal tribes. which, as before remarked, judging from existing remains, was considerable.

To the same purport are the observations of Mr. C. A. Elliott respecting the changes in the distribution of the races of Oudh. The two periods in the history of that country, namely, Aryan and post-Aryan, he describes as follows: "When the Aryan race," he says, "invaded the Gangetic valley and the Surajbansis settled in Ayodhya, the natural resource for the aborigines would be to fly to the hills, and find refuge in their impenetrable fastnesses, girded about with the deathly Terai. When the curtain rises again, we find Ayodhya destroyed, the Surajbansis utterly vanished,

<sup>&</sup>lt;sup>1</sup> Dr. Oldham's Statistical Memoir of the Ghâzipûr District, p. 49.

and a great extent of country ruled over by aborigines, called Cherûs in the far east, Bhars in the centre, and Rajpusis in the west. This great revolution seems to be satisfactorily explained by the conjecture, that the Bhars, Cherûs, etc., were the aborigines whom the Aryans had driven to the hills, and who, swarming down from thence not long after the beginning of our era, overwhelmed the Aryan civilization, not only in Sahetan and the other northern towns, but in Ayodhya itself, drove the Surajbansis under Kanak Sen to emigrate into distant Gujerat, and spread over all the plain between the Himalayas and that spur of the Vindhya Range which passes through the south of Mirzâpur."

These aboriginal races, having once re-entered the tracts of country which they had wrested from the Aryan tribes, settled upon them, and remained comparatively unmolested for a long period extending over hundreds of years. All this is plain when it is considered how firm was the hold which they had on the country when the wave of Râjpoot immigration began to flow in upon them. Their cities and towns, their industrial arts, their huge earthworks, their canals and trenches, connecting rivers, and so forth, are irrefragable

proofs of their permanence and prosperity.

But it must not be imagined that the land was cleared and cultivated to the extent in which we now see it. On the contrary, it is likely that not only during this period of non-Aryan occupation of this portion of India, but also during the preceding period of Aryan occupation, the country had not been largely brought under cultivation, and that immense forests abounded, extending over many miles. My own conviction is, that only in comparatively recent times, especially since the reign of Akbar, have the vast plains of Northern India been subjected to the plough and the harrow. The Emperor Baber, the grandfather of Akbar, in his Memoirs, says that while at Chunar, a lion, a rhinoceros, and a wild buffalo were seen close on the edge of his camp, and that many elephants roamed in the jungle around Chunar, and

apparently even as far as and beyond Benares. Elephants are known to have frequented the jungle between Chunar and Allahâbâd in the sixteenth century; and the hills to the south of the Ganges must at that time have been almost unapproachable.

It is certain, therefore, that at the time when the Bhars and other industrious aboriginal races planted their villages and cultivated the lands around them, vast tracts infested by wild beasts remained uncleared. They inhabited, in short, an illimitable forest, which they cleared in places and cultivated, subduing the untamed land, providing against dearth by digging splendid tanks, banking up morasses, utilizing water-courses, and thus laying the foundations of social happiness and comfort. "All inquiry," says Mr. G. Ricketts, "shows that the civilization of this district, namely, Allahâbâd, and its reclamation from the primitive jungle, was of comparatively recent date, that is, within four hundred and fifty years. Very few of the Mahomedans claim descent from the followers of Shahab-ud-din; but few Hindus date back beyond the reign of Jai-Chand, of Kanouj, whose followers, when defeated by Shahab-ud-din, populated a portion of this district; but almost all state that their ancestors took possession of those jungle tracts which form their present estates within this period." If our own remarks respecting the social condition of the Bhars be correct, the estimate Mr. Ricketts forms of the cultivation of this tribe, and of others in this neighbourhood, is altogether unsatisfactory.

Sir Henry Elliot considers it strange that so little notice is taken of the Bhars in the Purânas. The fact may be accounted for in two ways: in the first place, Brahmanical writers generally speak of the Dasyas and Asuryas, and all other non-Hindu races, with superciliousness and contempt, and consequently rarely exhibit a particle of interest in their welfare; and in the second place, the abandonment of a considerable tract of country on the part of the Aryans, who

 $<sup>^{1}</sup>$  Census Report of the North-Western Provinces for 1865, vol. i., Appendix B., p . 127.

occupied them, or their expulsion therefrom by aboriginal races, was an act of such little honour that it was natural not only that the circumstance should not be referred to in records devoted to the purposes of the Hindu tribes, but also that the aborigines themselves who had profited by it should be unnoticed. Sir H. Elliot conjectures, however, that an obscure reference to the Bhars is to be found in the Brahma Purâna, where it is said, among "the descendants of Jayadhwaja are the Bharats, who, it is added, are not commonly specified from their great number. So also the Harivansa says of the Bharats, i. p. 157, 'They form an immense family, whose numbers it is impossible to mention.' Or they may, perhaps, be the Bhargas of the Mahâbhârata, subdued by Bhim Sen, on his eastern expedition."

With all this industry and capacity, the Bhars were destined to perish. The chief cause of their destruction was doubtless, as already stated, the success of the Mahomedan invasions of India, whereby the great Râjpoot rulers of Kanouj and Delhi were overthrown, and the Râjpoot tribes generally of Upper India coming into collision with a foe stronger than themselves, were compelled to surrender their old possessions and to seek out new homes. Being driven from their own countries, they fled into the more secure regions of the east, where, coming in contact with aboriginal

In the Ghâzipur and Azimgarh districts a fierce and prolonged contest was carried on between the Bhars and the Sengarh Râjpoots, from Phaphund in the District of Etawah. These latter first entered the northern part of Ghâzipur, in the employment of the Bhar Raja who resided there. After a time, receiving some provocation from the Raja, they killed him, and endeavoured to seize his territory. The Bhars, however, bravely defended their lands; but the superior military skill of their enemies was more than a match for their courage and numbers, and they were obliged to submit to the yoke of the conqueror. The Sengarhs had two chiefs, Hari Thakur and Bir Thakur. The descendants of the former

<sup>1</sup> Elliot's Supplemental Glossary, p. 83.

occupy the Laknesar pargannah, while those of the latter are found partly in the Zuhûrâbâd pargannah of the Ghâzipur District, and partly in a portion of Sikandarpur, in the Azimgarh District. They reckon fifteen generations since their arrival in these parts, which shows that the Bhar rule lasted until a comparatively recent period.

The extensive pargannah of Kantit, in the Mirzapur District, derives its name, according to tradition, from the famous Râja Karn, who, it is said, came on a tirth, or pilgrimage, to the island of Ram Gyah, in the Ganges, near Vindhyachal. Karn-tirth has been contracted into Kantit. Formerly this tract was in the possession of the Bhars, but was wrested from them by the Gaharwar Rajpoots, under their chief, Gudhan Deo, of the family of Raja Jai-Chand, of Kanouj, who massacred the Bhar ruler, together with his relations The capital of the Bhar kingdom in these and attendants. parts was, I conjecture, the extensive city of Pampapura, from which the sculptures were brought which have already been described. Gudhan Deo built forts on his domains, portions of which are still standing. This chief also took from the Bhars the lands of Khairagarh—now a pargannah in the Allahâbâd District—which afterwards fell to one of his sons. The number chaurast, or eighty-four, was applied to so many villages. Hence there is a Tuppeh Chaurasî, or sub-division. consisting of eighty-four villages, both in the pargannah of Kantit and Khairagarh. This family became very powerful, and spread over a wide extent of country, occupying large tracts in the districts of Allahâbâd, Mirzâpur, Jaunpur, and Benares. The present Râja of Manda, one of Gûdhan Deo's descendants, possesses a small portion only of this territory: yet it consists of six hundred and seventy-five square miles.2 It has been said that the Gaharwâr Râjpoots once ruled from old Kanouj to Allahâbâd and Mirzâpur; but this, perhaps, is only conjecture.

To the north of the Ganges, in what is now the Badohî

Dr. Oldham's Statistical Memoir of the Ghâzipûr District, chap. iii. sec. ix.
 Mr. C. Raikes' Settlement Records of Kantit Pargannah, sec. 4. Report of Revenue Settlement, Allahâbâd, vol. ii., part i. sec. 29.

pargannah, the Bhar principality was destroyed by the Monus Râjpoots, who came from Amber, or old Jaipur, where the elder branch of the clan still exists. The tradition of the circumstance—universally believed in the neighbourhood—is as follows:-Five persons of the Mon race undertook to perform a pilgrimage from their own country to Benares. Passing through the Bhar territory, they were attracted by its advantages, and determined to remain there, and to settle among its inhabitants. They were joined by other members of their tribe, whom they invited over. As they increased in numbers and importance, the Bhars sought to make alliances with them; but their overtures being discountenanced, disputes at length arose on the subject of intermarriage which increased to blows. This seems to have been the signal for a general attack upon the Bhars, and in the struggle which ensued the Monus people were so successful that they not only completely subjugated the aborigines, but utterly destroyed them. At the present day scarcely a Bhar is to be found from one extremity of the pargannah to the other, so absolute and entire has been their extermination.

Fortune, however, is a fickle goddess, and the fate of the Monus Râjpoots of Bhadohî, and also of the Gaharwâr Râjpoots of Kantit, affords a notable instance of her inconstancy. The former, calling in the aid of Pirthipat Singh, Râja of Partâbgarh, to settle their family disputes, fell into his power; and, in the year 1751, the pargannah passed from his hands into those of Balwant Singh, Râja of Benares, with whose descendants it still remains. This powerful and ambitious chieftain also obtained possession of the Kantit lands, driving out the Gaharwâr Râja, Vikramajit, who, with his attendants, sought safety in flight. For nearly five hundred years the Raja and his predecessors had occupied the country. On the rebellion of Raja Cheit Singh, of Benares, Warren Hastings sent for Raja Gobindjit, son of Vikramajit, from his hiding-place, for the purpose of restoring to him his patrimonial estate of Kantit. The new Râja of Benares, however, had sufficient influence with the British Government to hinder its restoration; and he only received a tenth part of its original receipts. His successors now reside in the old Gaharwâr Fort of Bijaipur, the domains of which were afterwards given as a commutation of the tenth. The prestige of the ancient Gaharwâr family in the flourishing commercial city of Mirzâpur is very great; and when the Mutiny was at its height, the Government wisely availed themselves of it in preserving order among the people.<sup>1</sup>

It is greatly to the credit of the Râja of Benares, that during the time of his occupancy of the Kantit estate, he exerted himself most energetically in promoting the prosperity of the new and rising city of Mirzâpur. He sent over traders of various kinds from Benares, and a detachment of horse and foot was stationed there for the security of its inhabitants. The trade of the city rapidly increased, and it is not too much to say that its present important position as one of the chief centres of trade in this province is mainly the result of the Râja's enterprise.<sup>2</sup>

Again, in the district of Allahâbâd several tribes of Râjpoots at various times ejected the Bhars. For instance, the Bais Râjpoots are found in Jhansa pargannah; the Monus Râjpoots, in Kawai; the Sonak, in Meh; the Tessyal, in Sikandra; and the Nauwak, in Nawab Gunj. The Bisen Râjpoots have settled in Karra, and Atharban in the Doab.<sup>3</sup>

The Bais Râjpoots of Oudh were very ruthless in their treatment of these industrious aborigines. Mr. Patrick Carnegy, in his "Historical Sketch of Fyzâbâd," gives a particular account of the successful raids by members of the Bais tribe in that part of Oudh now known as the district of Fyzâbâd. The Bais of Malethu overthrew and dispossessed the Bhars only two hundred years ago; whilst the Bhars of Sohwal and Rûrû aided in the suppression of the Bhars four hundred years since. The Bais of Uchhâpali did the same about the same period. The Bais of Râmpûr Bhagun Tikvî fought the Bhars in the time of the Emperor Jehângir. The

<sup>1</sup> Report of the Bhadohî Pargannah, pp. 4, 5, 8.

<sup>&</sup>lt;sup>2</sup> The same. <sup>3</sup> Report of Revenue Settlement, Allahâbâd, vol. ii., part i., sec. 45. Settlement Report of the Azimgarh District, vol. i., sec. 24.

Bais of Gonda took service under the Bhar chief some three hundred years back, embraced the opportunity of killing him, and seized his estates. The great Bais families holding lands in the pargannah of Mangalsi expelled the Bhars from two to three hundred years ago. The Mahomedans residing there state that Mangal Sen, from whose name the word Mangalsi is derived, was a Bhar.

I have already referred to the territory in the Gorakhpur District, now occupied by the Kansik Råjpoots, and formerly occupied by the Bhars, who were driven out from their lands

or destroyed, like the rest of their race.

The Råjpoot tribes, although the principal, were not the only enemies of the Bhars. The Mahomedans also at various times settled in many places on their lands. In the Allahåbåd District the pargannahs of Chail and Karålî are almost entirely in the occupation of Mahomedan proprietors. Being near the city itself in which the Nazim, or chief local officer, and his underlings resided, it is not remarkable that these pargannahs should have fallen a prey to their cupidity. When the kingdom of Jaunpur was established, in the fourteenth century, all this part of the country formed a portion of the King of Jaunpur's dominions, and remained so until the downfall of the last king, Hussain Khan, towards the end of the fifteenth century.

If the dates given above be correct, it is plain that the Bhars, not a great while ago, were the lords of the soil over a considerable portion of the Benares Province and the Province of Oudh. It does not appear that at any time they possessed sovereign power; it is probable that they peacefully acknowledged the supremacy of the reigning monarch in these provinces for the time being, first of the Kings of Kanouj; then of the early Mahomedan Emperors; then of the Kings of Jaunpur, and lastly of the Mogul Emperors. Whether in the dark middle ages of Indian history, prior to the invasions of Mahmud of Ghaznî and his hosts, and after the fall and expulsion of the Buddhists, the Bhars were ever independent rulers, is a problem which cannot be solved.

Yet what has become of the old Bhar race? Their fate

has been most disastrous, inasmuch as they have not only been robbed of their lands, and of all authority incident to wealth and rank, but their conquerors have plunged them in the lowest depth of humiliation. Their present condition proves conclusively that they were ever regarded by their oppressors as fair game, to be hunted down and destroyed. Not content with doing their utmost to exterminate the Bhars during long centuries of grinding tyranny, they have degraded the survivors of the race to the most abject condition in the social scale. Here and there, in many places, as will presently be shown, Bhars are still found; but, with few exceptions, their state is one of great social ignonimy. They are largely employed to tend swine, an office which in India only the most despised and disreputable classes will undertake. Perhaps this office is a remnant of the old habits of the Bhars, and indicates, as it is indeed almost certain, that their ancestors ate pork and the flesh of other animals. By some persons the Bhars are included in the caste of Pasis, one of the most ignoble of the non-Hindu castes.

It would be interesting to learn the history of the degradation of a race of people, of enterprise and skill, of originality and singular practical ability, which it is evident once characterized them in no ordinary degree. Their supplanters, whether Râjpoots, Brahmans, or Mahomedans, though more civilized and refined, are not to be compared with the nobler aborigines, whom they have ruined, in regard to the great works of public utility which have been executed in the land. In default of such historical information—which, indeed, there is little probability of our ever acquiring—the only explanation of the circumstance that I can give is, that their present miserable condition is the result of the pride and intolerance of their conquerors. As a non-Aryan tribe they were considered impure, and altogether unfit to be the companions of the twice-born and their associates. Their industry, their natural gifts, their energy and perseverance, constituted, in the judgment of these high-caste intolerants, no claim to their consideration; on the contrary, may have furnished a reason, in addition to their religious uncleanness, for depressing them as low as possible. The mental superiority of the Aryan races over the Bhars, and other similar aboriginal tribes, admits of no dispute; and it is equally certain that, in industry and practical sagacity, they were barely equal to them. This is proved by the fact, patent to all residing in those parts of India to which special reference has been made in this essay, that there are more numerous remains of their mechanical ability and scientific attainments in that tract than of all the Râjpoots and other Aryan tribes that have succeeded them. In the view of the writer, special measures should be adopted by philanthropists for the social and political regeneration of the Bhar, the Seorî-which has suffered a like degradation—and other aboriginal tribes. Well-informed and generous Hindus, who are deriving incalculable benefits from British rule in India-aspirants for political distinctions and favours, men animated, or professing to be animated, with noble desires for the enlightenment of their fellow-countrymen—may fairly be called upon to render efficient aid in this great enterprise. Nor should the Government withhold a helping hand. It has paid little practical attention to these despised classes hitherto. This is a grave though unintentional error. Why should not the Bhar and Seorî have a chance to recover their lost social position? The Government has it in its power to afford them this chance. Has it yet the will?

A few of the Bhar tribe, although they may not have saved themselves from social contempt, are still in possession of property and comparative independence. While not a single Bhar landed proprietor exists in the Bhadohî pargannah of the Mirzâpur District, there are two Bhar land-holders, or were not long since, in the neighbouring pargannah of Kantit, in the same district. But these men, disloyal to their tribe, though wise in their generation, feeling the grevious burden of their social position, affect a Râjpoot title, notwithstanding that it is well known they are directly descended from the Bhars. The extensive tract in the Vindhya Hills, known as the Tallûqâ of Koindih, belongs to a Bhar clan.

In the Allahabad District this unfortunate race seems to

have been well nigh extinguished. There are, however, three Bhar villages in the Khairagarh pargannah, namely, Majera, Kalvanpur, and Omraicha, the families of which are said to have right to six others, although in realty only occupying these three. It is probable that the Bhars, driven away from more civilized regions, retreated into the wild jungle of Khariagarh, and remained there long after multitudes of their race in other places had been destroyed. But they were finally expelled by the present Râja of Mândâ, to whom reference has been already made. The Arail and Barrah pargannahs have also Bhars residing in them. They are likewise met with in every village of pargannah Salimpûr, Majhohî in the Gorakhpur District. In Shâhâbâd thev still hold a portion of the extensive domains formerly in the possession of the tribe. A pargannah of Chota Nagpur is called Bharwa.

In fact, the Bhars still cling with pertinacity to the country in which their more fortunate ancestors flourished for so many generations. In most of the cities and towns, and in not a few of the villages likewise, scattered members of the tribe are found. The exhibit little tribal cohesiveness or esprit de corps, and are utterly destitute of spirit and enterprise. In the Ghâzipur District alone there are fifty-six thousand Bhars; in Gorakhpur, sixty-three thousand; in Azimgarh, sixty-nine thousand; in Benares, thirty-three thousand, and many more in other places. Bhars are commonly employed as village policemen, and also as ploughmen. It is said that there are properly two divisions of them, the Bhars and the Râjbhars, the latter differing from the former in not eating swines' flesh, and being regarded, consequently, as more honourable than the latter. It is not improbable that they may be descended from the old Bhar nobility. Râjpoots are in the habit of purchasing female children from the Rajbhars and marrying them to their sons; this arises from the habit of infanticide which has existed for so long among some of the Rajpoot tribes.

In spite of the pertinacity with which, if tradition is correct, the higher castes kept aloof from Bhar alliances, they

were not always successful in doing so. In the Allahâbâd District, for instance, three examples are found of unions with Bhar families. Mr. G. Ricketts in his memorandum states that three influential castes or clans claim an admixture of Bhar blood. These are the Bharors, Garhors, and Tikaits. The two former are not numerous; they are landed proprietors in the southern portion of this district, and appear to be a connecting link between the higher castes, who are generally landed proprietors, and those inferior castes, whose lot is servitude. The Tikaits are numerous and possess much influence. A Chauhân leader carried off his Bhar chief's daughter. The descendants are still proprietors of a portion of that Bhar chief's possessions.

Mr. P. Carnegy, in his "Notes on the Races of Oudh," indulges the strange notion that the Bhars are of Råjpoot origin, and the Cherûs also, "and such like." And yet he acknowledges that the "weight of opinion seems to be in favour of the belief that the Bhars may have been the so-called aborgines of Eastern Oudh, which formerly included Azimgarh and Gorakhpur." This view he dissents from, holding that if they were "not the aborigines of Eastern Oudh, they were at any rate Råjpoots in Råma's time, or long

before the Christian era."

It is a question of considerable ethnological interest whether the Bhars were originally connected with the Cherûs, Seorîs, and other ancient races of Northern India. The Cherûs are sometimes spoken of as a branch of the Bhars; and as to the Seorîs, it was the opinion of Sir H. Elliot that there was great reason to suppose that Cherûs and Seorîs were formerly one and the same; yet he says it is very difficult to trace the connexion between these tribes. It is certainly remarkable that the pargannah of Barhar, in the Mirzâpur District—which I have no doubt should be Bharhar; the second syllable, "har," being the reduplication of the "har" of the first syllable—is at the present time partly inhabited by a race of Seorîs.

My own belief is, that many of the aboriginal tribes of

1 Mr. Ricketts' Report, p. 128.

India were originally blended together. All investigation into the races of India goes to prove that at various epochs separate tribes have spread over the land, one pushing forward another, the weaker and less civilized retreating to the jungles and hilly fastnesses; and the stronger, in their turn, giving place to fresh and more vigorous clans. It may be impossible to prove, therefore, what is nevertheless highly probable, that in very ancient times most of these tribes were exceedingly few in number; for it is a singular circumstance, opposed, indeed, when regarded superficially, to the assumption I am making, that the races of India, whether Aryan or non-Aryan, for a long succession of ages, have largely maintained their distinctive individuality, notwithstanding the fluctuations in their respective histories. Still, to some extent, they have united with one another, and it is indisputable that a large number of the low castes of India have sprung from unions between the races. In many instances a careful scrutiny can detect in these castes, not only their special differences, but also the very names by which the clans they represent were primarily designated.

This scattering of tribes over the country has produced a result which perhaps is not found on the same scale in any other part of the world, namely, that every district in India has its peculiar clans, with their own traditions and annals; and has, in addition, a host of fragmentary and isolated remnants of lost or vanquished tribes, like the Bhars, of which, in some cases, scarcely more than their bare names can now be traced.

But the subject of the history of the aboriginal races of India is one which, although material is being gradually collected for its elucidation, is nevertheless so intricate and involved that it will require long and patient research before satisfactory conclusions are attained. The unravelling of the tangled skein of Indian history is necessarily a work of time, and of great difficulty. Yet something has been already accomplished by earnest, conscientious, and painstaking labourers. Exceedingly harassing as the task undoubtedly is, still knot after knot of the disordered thread is being gradually

unloosed. The enterprise is one demanding perseverance and industry, which will achieve in this, as in most pursuits, far greater and more brilliant results than the sudden efforts of an intense and fitful enthusiasm.

In addition to my own independent investigations on the subject of this essay, I have received considerable assistance in its preparation from the following works:-Mr. Plowden's General Report of the Census of the North-West Provinces, for 1865; Mr. G. Ricketts' Memorandum on the Castes of Allahâbâd, in the General Report; Report on the Bhadohee Pargannah of the Family Domains of the Mahârâja of Benares, by Mr. Duthoit, Deputy Superintendent; Settlement Records of the Kantit Pargannah, Mirzâpûr, by Mr. C. Raikes; Revenue Settlement Reports of Gorahkpûr, Allahâbâd, and Azimgarh; Benares Magazine, Vol. II.; Dr. Wilton Oldham's Report on the Ghazîpûr District; Sir H. Elliot's Supplemental Glossary; Memoirs of the Emperor Baber; Mr. C. A. Elliott's Chronicles of Oonao, a District in Oudh; and Mr. P. Carnegy's Races, Tribes, and Castes of the Province of Oudh.

ART. XIX.—Of Jihad in Mohammedan Law, and its application to British India. By N. B. E. BAILLIE.

The term Jihad is technically applied to warfare carried on for the propagation of the Mohammedan religion. As such warfare is unlawful, unless the people against whom it is about to be waged have been first summoned to embrace the faith, this summons has entered into the legal definition of the term. Jihad is accordingly defined to be a call to the true religion, and war with those who refuse to accept it in their persons or property,—that is, by professing the faith themselves, or by submitting to pay the jizyut or poll-tax, by means of which they are rendered free to the open profession of their own religion.

Two conditions are required to the permission or legality of Jihad. One of these is the refusal of the enemy, when called upon, to submit to the proffered terms, together with the absence of any agreement or treaty between them and the Mussulmans; and the other is good ground for hope on the part of the latter that they will be able to contend successfully against the enemy, should the terms be rejected.1 Subject to these conditions, aggressive warfare against infidels is lawful according to the Soonnees.2 But the Sheeahs add a further condition, namely, the presence of the Imam, or of some one appointed by him to conduct the Jihad; 3 and as that cannot be had while he remains concealed from the eyes of the faithful, Jihad, according to the Sheeahs, is, under present circumstances, positively forbidden. It is, I think, commonly assumed by Soonnee writers, at least by those of the Hanifite or prevailing sect in India, that Jihads are directed and organized by the Imam or head of the whole Mussulman community. But as in these times there is no

<sup>&</sup>lt;sup>1</sup> Futawa Alum-geeree, vol. ii., p. 266. <sup>2</sup> Hamilton's Hedaya, vol. ii., p. 141. <sup>3</sup> Shuraya-ool-Islam, p. 136.

generally acknowledged head of the whole community, it is held that the duty of *Jihad*, which is in a manner incumbent on all true believers, is sufficiently satisfied if any one *kowm* or tribe of Mussulmans is engaged in it. It follows, therefore, that *Jihad* may be proclaimed and organized by the Imam or head of any tribe or nation of Mussulmans who is able to conduct it with a reasonable hope of success; without which, indeed, *Jihad* is positively unlawful, as a useless im-

perilling of the lives and property of the faithful.1

When the Imam has determined on a Jihad, he should review and number his army, to ascertain its strength in horse and foot, and enter the names of his soldiers in a general muster-roll. He is then, upon entering the enemy's country, to call upon the people in the terms before mentioned, and if they should reject both alternatives, and are conquered, their persons and property are at his absolute disposal. It is important to observe that if there should be any among the conquered people who have embraced the faith, though themselves and their infant children are free, and they are allowed to retain possession of their movable property, yet all of it that is immovable becomes, like the rest of the conquered territory, fei, or confiscated for the benefit of the conquerors.<sup>2</sup>

From what has been said it is obvious that Jihad is public warfare, and as it is permitted only under conditions which a State alone is capable of satisfying, it is evident that it is only in such circumstances that it can ever be the duty of individual Mussulmans to join in it. Even then it is only a general duty, and does not become special, so as by its neglect to bring guilt on individuals, so long as it is engaged in by any one tribe or people of Mussulmans. The only case in which, from being a general duty, it becomes special, is that of a nufeer or alarm that the enemy are coming to attack a country, and the persons, families, and property of its inhabitants. It then becomes the duty of all who are able to go out to the Jihad. But even in such circumstances, it is not the duty of the whole Mussulman community to come to

<sup>1</sup> Fut. Alum., vol. ii., p. 266.

<sup>&</sup>lt;sup>2</sup> Hedaya, vol. ii., p. 170.

their aid. Only those who are near the enemy, and able to contend with them, are bound to join in the contest. With regard to all the rest, the duty remains as before, furz-i-kifayut, that is, one which is sufficiently fulfilled, if observed by any tribe belonging to the community.

These are the only two cases that I have met with in the books in which Jihad is permitted or lawful, and they afford no sanction to the idea that Mussulmans living under a foreign government are allowed to rise up against it unprovoked; while it is to be observed that permission is absolutely necessary to the legality of Jihad, for the destruction of human life is in itself a positive evil. Much less can such a rising be considered a duty under such circumstances. Indeed, to suppose that it can be so is little short of a libel against the Mohammedan Law and Religion.

I have hitherto assumed that there is no treaty or agreement between the people against whom the Jihad is carried on and the general body of Mussulmans. Though Mohammedans have long ceased to be under the sway of one sovereign, they are so bound together by the common tie of Islám, that as between themselves there is no difference of country, and they are therefore said to compose one dar or mansion; and in like manner, all who are not Mohammedans. being accounted by them as of one faith, however much they may differ from each other in religious belief, are also said to be of one dar. The whole world, therefore, or so much of it as is inhabited and under regular government, has been divided into the Dar-ool-Islam, which comprehends Arabia and all other countries subject to Mussulman rule, and the Dar-ool-Hurb, which comprehends all countries that are not subject to such rule.

Though hurb means literally enmity, and all foreigners are hurbees or enemies in the eye of the law, yet Mohammedan governments have found it necessary, from the earliest times, to enter into treaties of peace with foreigners. It is true that the Imam may, if he deem it to be for the advantage of the Mussulmans, withdraw from such treaties by giving due

<sup>&</sup>lt;sup>1</sup> Hedaya, vol. ii., p. 140.

notice of his intention; but while the treaties remain in force they are strictly to be observed, and are binding on the whole community. The notice of withdrawal must be such as to enable the king or ruler of the people with whom the treaty was made, to give his subjects timely warning throughout his dominions, and thus put them on their guard against a Without such notice the renewal renewal of hostilities. would be ghudr or perfidy, for which the Prophet has indicated his special abhorrence in terms that will be noticed

more particularly hereafter.

The exigencies of commerce have also rendered it necessary to sanction the residence of foreigners in Mohammedan countries, when similar privileges are allowed to Mohammedans in these countries. In such circumstances, when a Mohammedan is allowed to reside in a foreign country, he is strictly prohibited by his own law from molesting in any way, either in their persons or property, the people among whom he is permitted to dwell. The reason or principle of the prohibition is this, that by isteeman or obtaining protection, he has become in a manner a zamin, or surety to the people for his peaceable conduct towards them, and any molestation by him of them, under such circumstances, would be a breach of suretyship, and an act of ghudr or perfidy. 1 The principle is therefore quite general,—suretyship being the corelative of protection, -and it is equally applicable to all persons, whether merchants or not, and whatever be their numbers, who have obtained, or are in the enjoyment of, the protection. Being the co-relative of protection, it is binding only so long as that is afforded. If, therefore, the sovereign of the country should break his engagement by seizing the property of a Mussulman resident, or throwing him into prison, or others should do so with the sovereign's knowledge and without his preventing them, the person subjected to such treatment would be freed from his counter-obligation, and might lawfully retaliate by molesting the people of the country in their persons or property. But until this takes place, the resident under protection, or moostamin as he is

<sup>1</sup> Hidayah (original), vol. ii., p. 715.

termed, is bound to refrain, and any breach of his obligation of suretyship is, as already observed, ghudr or perfidy.

Now Mohammed has marked his special abhorrence of this offence by declaring that the *ghadir* or perfidious person shall be set up on a stake, that is impaled, at the day of final retribution, in order that his perfidy may be publicly made known to the assembled universe.<sup>1</sup>

So much for the general law of Jihad. Let us now see how far it is applicable to the relation in which the British Government stands to Mohammedan countries, and the Mussulman subjects of our Indian Empire stand towards the Government of that country.

With regard to the first point, there are subsisting treaties of amity between the British Government, on the one hand. and the Turkish Empire and the kingdoms of Persia and Afghanistan on the other. These treaties are binding on the whole Mussulman community; in so much that while they subsist, Jihad, or warfare for the purpose of propagating the Mussulman faith among the subjects of the British Government, is prohibited to all Mohammedan States. If, therefore, the Sittanah camp, which is said to be formed on our northwest frontier, for the purpose of invading our territories, is to be considered as a Mohammedan State, having a duly constituted Imam at its head (and it is only on such a supposition that Jihad by it would be lawful), then the people assembled in it are bound by the said treaties, and are actually prohibited by their own law from making any assault of a religious character upon us. It cannot therefore be lawful for other Mussulmans to assist them in any attempt of the kind, and much less so for our Indian Mussulmans, who are under a further restraint by the protection afforded them by the Government of that country.

That they enjoy the fullest protection under the British Government cannot be denied. Nor has it ever been alleged that they are exposed to any kind of molestation in their persons or property by the Government, or by any other persons with its knowledge or connivance. They are thus

<sup>&</sup>lt;sup>1</sup> Kifayah, vol. ii., p. 762.

clearly under the obligation imposed upon them by their isteeman or enjoyment of protection. Any act of hostility in their own persons, or by money or other assistance given to enemies, would therefore be an act of ghudr or perfidy on their part, and thus expose them to the doom denounced

against the ghadir by their own Prophet.

Before concluding these remarks, I will briefly advert to a question that has been lately revived amongst Mussulmans in India, viz., whether so much of that country as is subject to British rule has become Dar-ool-Hurb, or is still Dar-ool-Primâ facie, every country under any other than Mussulman government is to be accounted Dar-ool-Hurb. But, according to Aboo Huneefa, a country which, like British India, was once Dar-ool-Islam, does not change its character merely by passing under the government of infidels. Other conditions are required, which can hardly be said to be fully satisfied in the case of British India. According to his two disciples and companions, Aboo Yoosuf and Mohammed, these conditions are not required, simple conquest being all that they deem necessary. Analogy is in favour of their opinion, but the results to which their doctrine would lead are rather in favour of that of their master. By conquest the whole property, public and private, of the conquered people, passes ipso facto to their conquerors; and this holds good of conquests by infidels over Mohammedans, provided that the property is secured within the infidel territory. Now this condition is satisfied at once if the country in which the property is situated becomes Dar-ool-Hurb, and the Mussulman owners thus lose all right to reclaim their property, if it has been divided, as it legally may be, among the soldiery. Be that as it may, there is, however, no doubt that when the two disciples concur in opinion against their master, a judge is at liberty, according to the general rule, to adopt whichever of the opinions he thinks best. A Mohammedan leader disposed to attack British India is therefore not unlikely to treat it as Dar-ool-Hurb. Let us assume, then, that British India is Dar-ool-Hurb, and, further, let us suppose that the threatened Sittanah invasion has been made and is successful,

what are likely to be the consequences of such an event to Mussulmans in British India? The Sittanahs are Wahabees. that is, Soonnees of the straitest sect of the law, who wish to restore all things to their pristine vigour. According to the Mohammedan law the conquered country, with all the property, public or private, of its inhabitants, would immediately pass by the mere fact of conquest to the conquerors. There would be an exception to this in favour of the Mussulmans, so far as regards their movable property. but none as to their lands. These, as already mentioned. would, like the rest of the land in the country, become fei, or be confiscated for the general purposes of the State. particular, all permanent settlements of the revenue would be swept away; and last, but not least, all La Khirai tenures. which, if extended beyond the life of the grantee, are utterly void at Mohammedan law, might be at once cancelled. Further, the Mussulmans in particular, might be subjected to a rigid exaction of the *zukat* or poor's-rate from all persons possessed of property to the value of 200 dirhems (about ten pounds); which would be more than any income-tax that is ever likely to be imposed upon them by their Christian rulers. So that, on the whole, it might be better for our Indian Mussulmans, in a worldly point of view, as well as more conformable to the precepts of their Prophet, to remain contented with their present condition under the British Government, than to take their chance of what might befall them under conquerors of their own religion.

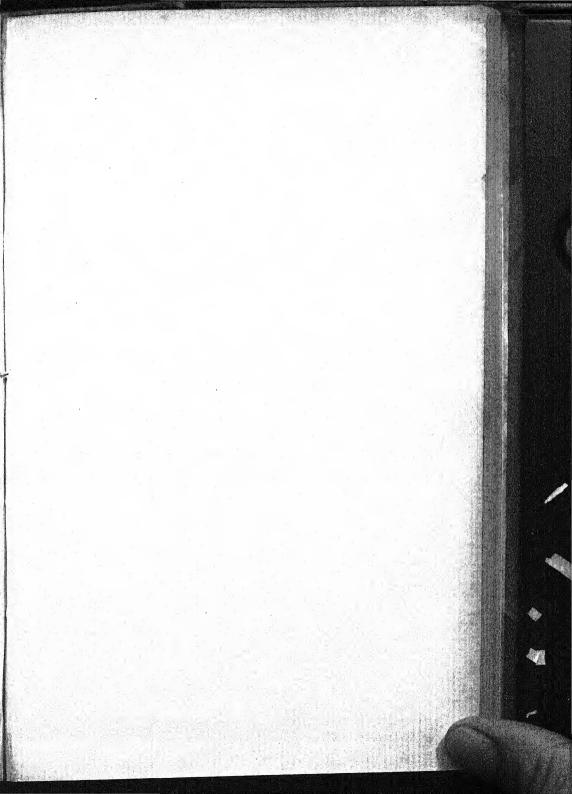

ART. XX.—Comments on Recent Pehlvi Decipherments. With an Incidental Sketch of the Derivation of Aryan Alphabets. And Contributions to the Early History and Geography of Tabaristán. Illustrated by Coins. By E. Thomas, F.R.S.

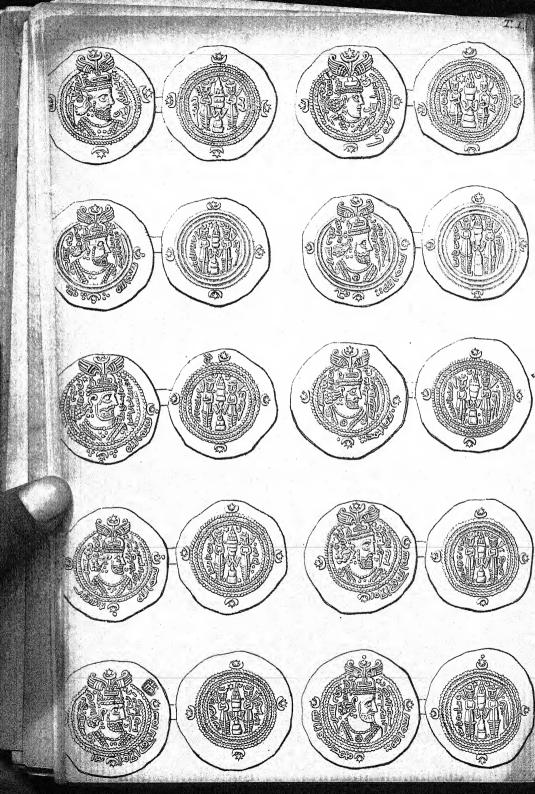

The plates which accompany this article have only recently been rescued from an obscure corner, where they had lain for years unappreciated. They originally constituted one division of a comprehensive medallic series, illustrative of the annals of the Sassanian Kings of Persia, which were prepared under the supervision of the late J. R. Steuart, from specimens in his own cabinets, and executed by the same conscientious Italian artist who engraved the copper-plates of the Saurashtran coins inserted in one of the earliest numbers of our Journal (vol. iv. p. 273, o.s.).

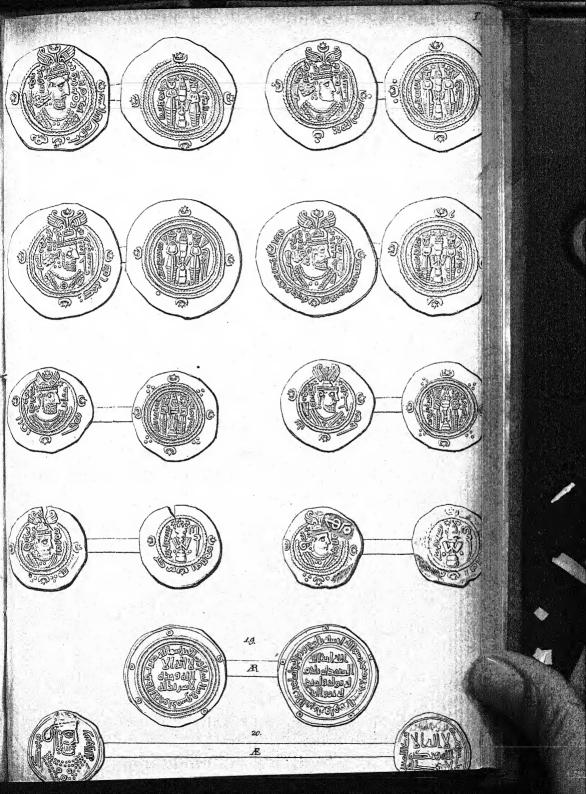

The two engravings, which now appear for the first time, embrace the concluding section of the series of ten 4to. plates devoted to the coins of "the Sassanian dynasty," and represent the specially transitional period immediately succeeding the Arab conquest. They furnish choice and consecutive examples of the introductory Muslim mintages, ranging from the crude imitative reproductions of Sassanian money by the first Muhammadans in Persia, and mark, in their gradations, the progressive stages of the Pehlvi mintages of the more settled rulers, up to the final adoption of the Kufic of the Kurán as the official alphabet of the expanded dominions of the Khalifs.

The majority of these pieces have already been described in our pages (vols. xii. p. 253, xiii. p. 373); but as I hesitated to burden the Society with such costly and elaborate designs, these engravings may, even at this distant date, fitly contribute to the elucidation of the general subject, and serve to

¹ These plates are now the property of that enterprising collector of Oriental antiquities, Col. S. C. Guthrie, who has freely permitted them to be used, in transfer, on stone, by the Royal Asiatic Society. The reduction from the original 4to. form on copper to the 8vo. reproduction now presented, signalizes an epoch in the history of the lithographer's art, and exemplifies a process which, under scientific treatment, even improves upon the effect of the metal engravings.

keep alive the interest in an obscure branch of research, the attendant difficulties of which necessarily limit the number of investigators. I propose to restrict the present notice of the coins to little more than a mere recital and explanation of their legends, with occasional references to the general progress of the study of the Pehlvi language that has marked the interval since the publication of my later papers on these subjects. As regards the purely numismatic aspect of the question, I am the more anxious to reserve any extended remarks, as our Society will be glad to learn that the illustration of this period of the history of the East is likely to receive considerable accessions, in the description of the magnificent collection of the late M. de Bartholomai, which is already in an advanced stage towards publication under the practised treatment of our learned Foreign Associate, Dr. Dorn, of St. Petersburg.

As preliminary and introductory to my special subject, I have to advert prominently to the discovery of the day, the "Moabite Stone," and the bearings of its typical alphabet upon the later developments of cognate Semitic characters on coins and other contemporary records; and somewhat unwillingly to reply, as briefly as possible, to certain criticisms which have appeared of late upon the Palæographic definitions and deductions put forth in my previous essays in this Journal.

The proclamation of Mesha, engraved on the now unhappily defaced monolith of Dibon, which has created so great a sensation in the Biblical world,1 presents but little of novelty to advanced students of initiatory Greek Numismatics, or

<sup>1</sup> La Stêle de Dhiban, M. Clermont-Ganneau, Révue Archéologique, March,

<sup>1870,</sup> p. 184. Derenbourg, Journal Asiatique, Jan. and Feb. 1870. Schlotmann, March 15. Times, May 5. Zeitschrift, i. and ii. Heft. 1870.

Notices more readily available to English readers may be found in Professor Rawlinson's article in the Contemporary Review, vol. xv. (August and November) 1870, p. 96, et seq.; and in Dr. Wright's learned and exhaustive paper in the unhappily concluding number of the North British Review. From the latter I extract the following close summary :-

<sup>&</sup>quot;An alphabet common to all the Shemitic populations of Syria-an alphabet from which were derived the Greek letters on the one side, and all the later

texts."-North British Review, October, 1870.

Palæographers who are able to trace the offshoots of the Phonician alphabet from the Pillars of Hercules to the banks of the Jumna.1 Nevertheless, its contributions are varied and valuable, presenting us with a complete alphabet of an ascertained date, some century and a half earlier than any other parallel document,2 a singularly close association in the configuration of some of its letters with the most authentic forms of Archaic Greek, and a new geographical site of dominant Semitism on the frontiers of Cuneiform strongholds.

Beyond the ordinary identities with the early Greek characters already freely recognized, the forms of the letters  $\Gamma$   $\neg$ ,  $\Delta$   $\triangleleft$ , and Z  $\mathcal{I}$ , are specially marked; we have new outlines of the digamma Y and the ₹ ₹, a modification of the  $\Lambda$  (, and a varied definition of the  $T \times$ , many of which peculiarities connect this most authoritative exemplar of the normal alphabet with the more clearly defined Aramæan and Persian types of Semitic writing.3

More than twenty years ago 4 I ventured to dissent from De Sacy's identification of the Sassanian letter  $\sim$  as m n; an interpretation which he had adopted on the faith of Anquetil du Perron, who had derived his knowledge of Pehlvi from the imperfect teachings of the Pársís of Bombay.<sup>5</sup> Although I was in a position to determine that De Sacy was in error,

The outlines given in the text were copied from the paper impressions of the original stone in the Palestine Exploration Collection; they have, however,

<sup>1</sup> Num. Chron. iii. N.s. p. 280.
2 Dr. Wright fixes the date of the inscription as "approximately in the 2nd year of Ahaziah's reign, or the beginning of that of his brother Jehoram" (b.c. 896, 894). The seals and tablets from Sargon's treasure chamber are supposed to belong to the time of Assher bani pal (about 667 B.C.). The Assyrian Lion weights are understood to be earlier (Mr. Norris, J.R.A.S. xvi. p. 215); and Sir H. Rawlinson places some of his Ninevite tablets in the eighth century B.C.

suffered greatly in the reduction into type.

4 J.R.A.S. vol. xii. o.s. (1850), p. 265. See also Num. Chron. xii. p. 77.

5 Anquetil himself, in speaking of the learning of his own instructors at an anterior period, or in the middle of the eighteenth century, uses the words, "L'ignorance était le vice dominant des Parses de l'Inde." (Zend Avesta, p. ccexxi.; Burnouf, Yacna, p. x.) Dr. Haug gives us an amusing pendant to this statement in saying, "The European reader will not be a little astonished to learn that Anquetil's work was regarded afterwards as a kind of authority by the Desturs themselves." ("Sacred Language of the Parsis." Bombay, 1862, p. 21.) See also Westergaard, J.B.A.S. viii. p. 350; and Max Müller, "Chips from a German Workshop," i. pp. 122, 167, 172, etc.

I was not, at the time, equally advanced in the power of saying what the real purport of the character might be, though I subsequently discovered that its true value was nothing more than the long or double i of the Sassanian alphabet, having an equally well-ascertained counterpart in the Chaldæo-Pehlvi, in the form of J In support of these binary identifications, I re-examined the question under its various aspects, somewhat at large, in a late number of this journal,1 as I was aware that there was a disposition to adhere to the old reading among many who had compromised themselves by accepting the original definition, even to the extent of its reception and incorporation into modern grammars and glossaries.2 The question has lately been revived by the direct negation of my justification for this correction by Dr. Martin Haug,3 with a reiteration of the claims of the Pársí rendering of m n (man).

<sup>2</sup> I conclude it is to some such feeling of hostility at my venturing to differ, not only from certain Continental professors, but more expressly from their masters in Bombay, that I owe an amusingly rabid attack in the "Révue Critique" (27th March, 1869), by M. Justi. The tone of this article would alone prevent my conceding to it any serious notice; but it is clear that no object could be attained by my entering upon a discussion with the author, or those who accept attained by my entering upon texts the very alphabet of which is still in dispute. So his interpretations upon texts the very alphabet of which is still in dispute. So his interpretations M. Justi's eccentric lucubration has received the commendation of that, although M. Justi's eccentric lucubration has received the commendation of M. Renau (Rapport, Journal Asiatique), I am content to surrender the writer to the more congenial conflict with his countryman, Dr. Haug, who has already sounded the note of defiance, about the "grave errors" of my "vicious" critic, whom he contemptuously designates as "a mere follower of Spiegel." (Pahlavi-Zand Glossary, pp. 25, 32.) <sup>2</sup> I conclude it is to some such feeling of hostility at my venturing to differ, Zand Glossary, pp. 25, 32.)

3 Dr. Haug is scarcely candid in affirming that "the phonetic value of the character > has been thought to be i, chiefly on account of its resemblance in form to the Zend letter 4" (An Old Pahlavi-Pazand Glossary, 1870, p. 44). There is far more varied testimony towards the identification than this abrupt utterance would imply, as I have, in effect, repeated above. My first acceptance of the letter as i dates from 1852 (Journal Royal Asiatic Society, xiii. p. 375); and I find Dr. Haug confessing in 1862 (Essays on the Sacred Language of the Parsees, Bombay, p. 45) that 32 | Barj is the Chaldee bar, "son," (ben in Hebrew and Arabic); the j at the end is another pronunciation of the relative i (or izdfat) above mentioned [in 2 > | Bagi]. It is curious that the Professor should at this period have so accurately realized and defined the mission of the letter and its direct association with the short i, and yet have failed to detect its positive import. It was reserved, however, for his later baptism in the fire-worship of the Gujarati Desturs to convert him from his hard-earned European knowledge to their atmosphere of placid ignorance, and the restoration of the contested symbol

I have held from the first that the idea of combining consonants, for the purpose of eliding the inherent short a of the conventional Aryan speech, was altogether undeveloped in the Semitic alphabet of the Sassanians, though the system had already been elaborated in the more critical Bactrian adaptation of the old Phænician characters in its parallel contact with the contrasted Lát or Páli character of the Indian provinces. This tendency is readily exemplified in the practical transcription of Greek names on the local coinage, where we find the Bactrian "Eukratides" and the Indian Páli "Agathokles" coalescing the consonant succeeding to the k, in either case to denote emphatically the absence of the soft a. Here the object of compounding and connecting letters is obvious enough; 1 but the most singular fact which the advocates of the rendering of the Sassanian  $\Rightarrow$  as  $\mathbf{1} \mathbf{4} = m n$  are altogether unable to explain is, if, as they confess, the two simple letters  $\mathcal{L}$  m and  $\mathbf{n}$  were written separately in the parallel text, with an optional value of man or min, why, or for what possible object, an arbitrary compound should have been introduced to convey the self-same sounds, a resulting alphabetical combination, moreover, which, according to their own showing, did not necessarily elide the short vowel. If this particular sign what been a composite character for m n, matured during the progressive manipulation of the normal alphabet, it ought to show some traces of the parent letters, whereas the simple  $\exists$ , in its various gradations, flows easily

to Anquetil du Perron's faulty version of man, contributed of old by the less degraded representatives of the Parsi faith in 1759.

Mr. E. W. West, C.E., whose good service to the cause of Indian palæography in his facsimiles and decipherments of the inscriptions on the walls of the Western Cave Temples, I can freely bear testimony to, has lately undertaken the study of Pehlvi, in concert with Dr. Haug, of Munich, and has argued the question of the value of the character under discussion with much patience and ingenuity in opposition to my interpretation. I am unable to discover that he has at all shaken my position, and I regret to find that he ignores, or unduly subordinates, the very important evidence in favour of the i, to be drawn from the previous identities of the Phænician and other derivative forms of . (Journal of the Royal Asiatic Society, 1870, p. 364.)

previous identities of the Phænician and other derivative forms of ... (Journal of the Royal Asiatic Society, 1870, p. 364.)

1 A large assortment of these compounds is given in my plate of the Bactrian alphabet (Num. Chron. iii. N.s. plate vi.), and the particular instances above cited may be consulted in Gen. Cunningham's plate v. vol. viii. of the same journal; and the facsimiles illustrating Professor Dowson's article on Bactrian Inscriptions, J.R.A.S. xx. o.s. p. 221. See also Professor Wilson's Kapurdigiri Inscription, J.R.A.S. xii. p. 153.

from the archaic model on the Moabite stone to the crystallized forms of the Pehlvi and Zend type letters 3 ? (in some founts more distinctly >== ), which were based on MS. writing, and engraved by independent parties on the Continent, altogether prior to any suggestion of this unpremeditated controversy. In addition to this difficulty about the m n, Mr. West has introduced a new element of discord in summarily attempting to convert the very palpable n of the Chaldæo-Pehlvi into a p; and, finally, Dr. Haug desires to elevate a badly defined  $\mathbf{\hat{z}} = k$  in the Sassanian text of the inscription into a new and extraneous letter, representing the sound of "kat." It may be said that this does not present a very long list of variants, after all; but the determination of the value of the most important of these characters as m n, or i, constitutes a positively vital question, as its decision in a measure carries with it the determination of the structure of the language itself.

Up to this time the Inscription Palæography maintains its archaic features in the absolute isolation of letter from letter. The tendency to continuous MS. writing, due to the consecutive flow of the pen upon a smooth surface, has already been adverted to (J.R.A.S. iii. n.s. p. 252). Its effect was speedily to reduce the Sassanian Pehlvi into the irrepressible conjunction of consonants and general reticulation of letters, which has added an adventitious obstacle to the free decipherment of the ancient writings in their modern garb. This tendency may be traced, in its progressive action, in the accompanying plates, and in its more ample development in the limited table of compounds prefixed to the description of the coins, in my previous article (vol. xii. p. 274). But the later Pársí complications may be exemplified by the demand of Dr. Haug upon his European printers for several hundred different forms to secure sufficient ambiguity for his client's interpretations.

Had the Bombay Pársís really understood the language they pretended to interpret, they might have printed every text in their possession, and at the same time have secured far

greater legibility, with the detached letters of their limited alphabet, instead of complicating the decipherment by the use of imitative MS. interlaced forms, for the partial definition of which no less than sixteen pages of modern type were

required.1

Finally, to reduce me to definite extinction, under the Pehlvi aspect, MM. Haug and West have put forth a trial piece, or competitive essay, in the form of a new and improved version of the bilingual inscriptions of Sapor engraved on the smoothed inner surface of the cavern at Hájiábád. My own tentative reading of this confessedly obscure text,—a text, be it remembered, that had set European linguists at defiance for half a century,2—was given with sufficient reserve,3 a feeling which does not seem to be shared by later interpreters. All I can say is, that if this translation, revised by Dr. Haug in 1870, after a preliminary ventilation by Mr. West in our pages in 1869, really and truly represents the purport of the original inscription, the "divine" King Sapor must have arrived at a very advanced stage of dotage before he could have consented to put his hand to such a document.4

<sup>1</sup> The Old Pahlavi-Pazand Glossary devotes sixteen pages (25-41) to "the various phonetic powers of the letters and their compounds occurring in the glossaries," etc., and its Editors confess that the list of needless obscurations is far from exhausted.

<sup>2</sup> J.R.A.S. iii. n.s. p. 339.

<sup>&</sup>lt;sup>2</sup> In 1858, I said in my edition of "Prinsep's Essays," ii. p. 108, "Of all those who are learned in Zend and its cognate languages—of the various professors who edit Pehlvi texts, or who put together grammars of that tongue—no single individual has to this day been able to add one line of translation to the bilingual inscriptions of Hajíabad, beyond what De Sacy had already taught us in 1793. In brief, our power of interpretation fails us exactly where the Sassanians have omitted to supply us with the Greek translations they appended to some of the parallel texts. parallel texts.

<sup>&</sup>lt;sup>4</sup> Lest my readers should suppose that I am exaggerating in this matter, I append M. Hang's revised version in his own original words:—After titles, etc., <sup>6</sup> the king. As we shot this arrow, then we shot it in the presence of the satraps, the grandees, peers and noblemen; we put the foot in this cave; we threw the arrow outside that it should reach the target; the arrow (was) flying beyond that (target); whither the arrow had been thrown, there was no place (to hit), where (arget); winther the arrow had been thrown, there was no place (to htt), where if a target had been constructed, then it (the arrow) would have been manifest (?). Afterwards it was ordered by us: an invisible target is constructed for the future (?); an invisible hand has written, 'do not put the foot in this cave, and do not shoot an arrow at this target after an invisible arrow has been thrown at this target;' such wrote the hand.'—Haug, Pahlavi General Glossary, p. 64. This reads like a very chaotic version of the ancient fable of Minuchelar, whose arrow from the peak of Damavand was to settle new boundaries, but whose progress through the air the incredulous reduced from the pretended Divine

One of the most curious points in this controversy is that Dr. Haug, whose accepted local oracle denounces in unmeasured terms 1 the ignorance of his fellow Pársís of Bombayproposes, like myself, to rectify their orthographical errors by an appeal to the unpolluted sources of "Sassanian Inscriptions." 2 It is clear that, under these conditions, the typical alphabetical scheme ought to be subjected to the most rigorous and thoroughly independent criticism; otherwise, if it be allowed in any way to lend itself to the needs of preconceived Pársí interpretations, it not only fails in its appointed mission, but perpetuates the very faults it is invoked to correct.

I have shown (p. 411, note 3) that Dr. Haug was very nearly fathoming the real import of the ancient character >; but what shall we say of his elected antagonist,3 M. Spiegel, who, after unconsciously admitting the mechanical configuration, and recognizing the true value of the sign in question, still theoretically hugged the ancient delusion of Anquetil in an opposite sense, despite of a second proof, amid his new materials, of its patent fallacy, in the obvious existence of a fourth vowel in his own Pehlvi MSS., to which he was obliged to concede an independent value amounting to something more than the force and effect of a short i, thereby confessing, in the very fact, that the normal language he was dealing with required some such additional letter, which he clearly did not

interposition to the mechanical aid of a wounded eagle.—Chronicles of Tabari,

i. p. 280.

1 For the last 500 or 600 years, the knowledge of *Pdzand*, or pure Persian, has <sup>1</sup> For the last 500 or 600 years, the knowledge of *Pazand*, or pure Persian, has gradually declined amongst Persian scholars in general, and especially amongst Parsi priests; so much so, that very few of the Destârs can now either write or understand it correctly, as can readily be seen from their imperfect notes in Pahlavi books, and incorrect modes of expression in other writings. This ignorance has prevailed to such an extent that though the priests learn this glossary, parrot-like, off by heart, yet they cannot critically make out the exact meanings of many words, but are satisfied with mere guesses, etc.—Destâr Hoshang Jamasp, in his Old Pahlavi-Pazand Glossary, p. ix.

<sup>2</sup> Ibid p. vii

<sup>3</sup> There has been a good deal of needless acerbity introduced into these discussions, and Dr. Haug seems to exist only in a permanent state of warfare with the rest of his countrymen. Spiegel, however, is more distinctly singled out for condemnation in such amiabilities as the following: "As regards his views of the character of the language, and his explanations of the non-Iranian element, linguists are not likely to feel satisfied." "The title of (a later) work, 'The Traditional Literature of the Parsis,' in its connexion with the conterminous literature is therefore more pratections than appropriate," etc. (An Old Pahlayi. ture, is therefore more pretentious than appropriate," etc. etc. (An Old Pahlavi-Pazand Glossary, pp. 16, 20.)

know how to provide for in his vague alphabetical reconstruc-

In his first publication, the Pársí Grammar (1851), M. Spiegel expressly declared that the identical character was the  $Y\dot{a}'i \ m'ar\dot{u}f$ , or known  $y\dot{a}$ , as opposed to the  $Y\dot{a}'i \ majh\dot{u}l$ , or unknown yá, represented by the Zend g.1 In his subsequent work on the "Huzváresch-sprache" (1856), he servilely adheres to Anquetil's Boman ייסיט ברמן for ייסיט ברמן (pp. 169, 172); but simultaneously enters in his Pehlvi alphabets the letter above referred to outlined as \_\_\_\_, to which he assigns the value of ê (pp. 27, 48, 53).2 This letter, as I have attempted to prove in my previous article, is, however, nothing more than i final, or the izáfat3 which plays so important a part in old and new Persian vernaculars, and which may be traced in the accompanying plates from the final  $\omega$  in Khusrui, figs. 1, 2, to the positive conjunctive but instructively isolated izáfat in figs. 3, 4, etc. I must, however, do M. Spiegel the justice to say that he has discarded the obnoxious Boman from his latest Pehlvi vocabularies.4

The Editors of the Old Pahlavi-Pazand Glossary, though they do not admit the letter \_\_\_\_\_\_ to a place in their table of alphabets, are constrained to recognize its true import amid the list of compound characters, where \_\_\_\_\_\_ is acknowledged to represent the sounds of "ai, hi, or khi." Why then, by parity of reasoning, should not \_\_\_\_\_ be equal to the ii, or, in

Chron. xi. 135; Rawlinson, J.R.A.S. X. I myself at one time shared this impression, which received much force from the parallel Armenian Khosrov (St.-Martin, Arménie, i. 412). The contrast, however, between the forms of the letter in question and that of the true b in the accompanying plates must be held conclusively to settle the point.

effect, furnish a modified form of the ancient letter whose purport as ii or  $\bar{\imath}$  I have been contending for ?<sup>1</sup>

The question raised by Mr. West, in his late article in this Journal, seems primarily to limit the discussion between us, as to what course we should pursue to establish our independent positions: he desires to try the language of the Sassanian inscriptions by the upward test of the Pársí fragments extant in Bombay, and the local interpretations accepted in that last refuge of Zoroastrianism. I, on the other hand, aim at the more comprehensive criticism afforded by the dialects of immediately proximate lands, and the inductive teaching of the earlier alphabets, preserved on medals, seals, and other antiquarian remains, which come down to the confessed startingpoint of the attempted neo-Persian reconstruction of the ancient rituals, under Ardashir Bábak and his immediate The representatives of the archaic creed to successors. whom this duty was entrusted are most candid in their admissions of the difficulties they had to encounter consequent upon the pretended destruction of the scriptures of the old Fire-Worshippers by Alexander the Great,<sup>2</sup> and the unavowed but more important influence of 557 years of discouragement and obscuration of the religion itself, which succeeded, under the Seleucidæ and Arsacidæ, up to the date of the attempted revival of their ancestral faith.

Nor did the ancient tongue itself fare better than the lost books which embodied the primitive rites. So long as the original Pehlvi maintained its position as the ruling verna-

<sup>1</sup> By some strange want of perception, the Editors of this Glossary have confounded the i and the very differently formed i, so that they describe the identical i as i and i as i as i and i as i

<sup>&</sup>lt;sup>2</sup> There is no possible pretence for saying that Alexander destroyed the ancient literature of the land; the single Palace and the Royal Archives at Persepolis were burnt; but so far from the Macedonian conqueror having proposed to himself any mission of eradicating old creeds, he rather took to them under their pleasant aspects. The real destroyers of the primitive lore were the Muslims, who nevertheless reverenced, and for a time preserved, and finally translated all that was worth having in the accessible Pehlvi MSS. It would rather seem that the new Zoroastrianism ought to take its date from the latter period of depression; for there clearly were plenty of Pehlvi MSS, still extant in A.H. 318 = A.D. 930.—See Reinaud, Abulfeda, p. lxv. note 2.

cular utterance, current among all classes of the nation, the limited seventeen letters of the coeval alphabet fully sufficed to convey any required sense to the comprehensions of those who thought and spoke in the common language. We have a nearly parallel illustration of this faculty of using short-hand notation in the colloquial Hindi of the present day, which resolutely refuses to avail itself of the intricacies of the more elaborated Sanskrit characters, and adheres consistently to the simple detached consonants of antiquity, with all the associate uncertainty of intonation. But the typical Persian language clearly became degraded on its own soil, under the action of successive waves of conquest, irregular hostile occupation and the introduction of foreign speech into the official documents of court and camp, as alien rulers chanced to dominate. Such influences, apart from the general depression of the religious communities, who alone had an interest in the preservation of the sacred texts, must have rendered any satisfactory reconstruction of the earlier rituals a task far beyond the powers of the degenerate Mobeds of the scattered Fire-temples, even if the old letters of the alphabet had not been then, as now, altogether insufficient to define obsolete grammatical inflexions, and still less competent to restore the purport of a lost tongue.

The language of the inscriptions, under these conditions, may be held to have primarily followed the mixed speech of the head-quarters, which consisted of a sort of Eastern Lingua Franca or Mesopotamian Urdú, abounding in Aramaisms, and in the selected epigraphs under review, freely interspersed with independent religious texts, which were by no means necessarily Zoroastrian.

The language of the books, on the other hand, if they truly reproduced the ancient texts, should have presented a modified form either of primitive Pehlvi, archaic Zend, or, at the lowest, a dialect but little removed from the Persian Cuneiform. But, to judge by its composite character, it would seem as if the dry bones and disjecta membra of the old Iranian rituals had been galvanized into a specious vitality by the introduction of Semitic verbs with Persian terminations, added to which the practice of writing one word and

pronouncing another savours strongly of priestcraft, whose revision in this case was neither competent nor honest. If to construct grammars and dictionaries out of such materials be a labour of high ingenuity, I can concede that much credit to our modern authorities; but I must be excused if I remain incredulous as to the value on finality of the results thus obtained.

If I have had to suggest anything derogatory to the attainments of the modern Pársí teachers in the Western Presidency, I am glad to have the opportunity of quoting, with renewed hope, our own Royal Asiatic Society's motto, "Ex Oriente lux," as, by a singular chance, I have this day (11th Jan., 1872) received from Bombay a comprehensive series of the publications of the later earnest revivers of the old lore, in their adopted home under the British flag-in the shape of even more difficult reading than the Pehlvi itself, as explained and illustrated by Guzráti commentaries; but I recognize with satisfaction the conscientious endeavours of the present representatives of the archaic faith in Bombay to encounter, and I trust overcome, many of the difficulties inherent in their ethnic language—in this I am the more encouraged by the tone of mixed frankness and confidence disclosed in Destúr Behrámjí Sunjana's preface to his new Pehlvi Grammar,1 which augurs well for the future, in a seeming aspiration of the local Pársís to free themselves from European dogmatism, and to rehabilitate their national speech by their intuitive hereditary perceptions, from independent

I A Grammar of the Pahlavi Language, by Peshotun Dustoor Behramjee Sunjana. (Bombay, 1871.) Preface, p. iii.: "The pronunciations of the Semitic terms as used by the Dustoors of Irán and of India are founded on the well-known authority of Malik Namah Assocree, which, as will be mentioned hereafter, is now more than 1200 years old, and at the time when this work was written the Pahlavi language was in its pristine use amongst the Zoroastrians of Irán. The modern Orientalists of Europe, however, have modified such pronunciations, but such modifications I do not feel justified in recommending to my Zoroastrian brethren." Of course, I am not likely to endorse all our new grammarian's notions, many of which are clearly crude, and require for their correction that foreign travel and outside ventilation which I have advised above; but not the less may I welcome an effort at free thought, and a seeking after the truth, which I admire above all things. One word of warning, too, I must add to those who may be disposed to over-estimate the advantages of Iranian descent, in the revival and reconstruction of their ancient tongue, as they must bear in mind that for generations past they have been domiciled and educated in a foreign land, and learnt from their cradles to frame their ideas in an alien idiom; so that their ancestral language, or even its modern representative, has to be acquired anew.

sources and the extant documents of their creed. I am sanguine that these records may be largely augmented when the less passive members of the community undertake to scrutinize their own Indian depositaries, or boldly seek to penetrate into other closed receptacles of the obscure literature of the past,—in lands to which they have preferential access.

In concluding this branch of a single alphabetical controversy, I may be permitted to reproduce a more comprehensive view of the general question, which I submitted vivà voce, but with scant preparation, to the Meeting of the Royal Asiatic Society on the 9th April, 1866.

As this merely suggestive outline has never been formally incorporated in our *Transactions*, I make no apology for quoting in full the semi-official report of the proceedings of the meeting of that date from the *Athenœum* newspaper.

The Right, Hon. Viscount Strangford in the chair.—Mr. Thomas, adverting to recent controversies respecting the parentage of the various modes of writing in use in ancient India, spoke "On the Adapted Alphabets of the Aryan Races." These were the results of his paleographical investigations: The Aryans invented no alphabet of their own for their special form of human speech, but were, in all their migrations, indebted to the nationality amid whom they settled for their instruction in the science of writing: (1) The Persian Cuneiform owed its origin to the Assyrian, and the Assyrian Cuneiform emanated from an antecedent Turanian symbolic character; (2) the Greek and Latin alphabets were manifestly derived from the Phœnician; (3) the Bactrian was adapted to its more precise functions by a reconstruction and amplification of Phoenician models; (4) the Devandgari was appropriated to the expression of the Sanskrit language from the pre-existing Indian Pali or Ldt alphabet, which was obviously originated to meet the requirements of Turanian (Drávidian) dialects; (5) the Pehlví was the offspring of later and already modified Phoenician letters; and (6) the Zend was elaborated out of the limited elements of the Pehlvi writing, but by a totally different method to that followed in the adaptation of the Semitic Bactrian. Mr. Thomas then proceeded to advert to the single point open to discussion involved under the 4th head, tracing the progress of the successive waves of Aryan immigration from the Oxus into the provinces of Ariania and the Hindu Kush, and the downward course of the pastoral races from their first entry into the Panjab and the associate crude chants of the Vedic hymns to the establishment of the cultivated Brahmanic institutions on the banks of the Sarasvati, and the elaboration of Sanskrit grammar at Taxila, connecting the advance of their literature with the simplified but extended alphabet they constructed in the Arianian provinces out of a very archaic type of Phænician, and whose graphic efficiency was so singularly aided by the free use of birch bark. This alphabet continued in use as the official writing under the Greek and Indo-Scythian rulers

of Northern India, until it was superseded by the superior fitness and capabilities of the local Páli, which is proved by Asoka's scattered inscriptions on rocks and monoliths (Láts) to have constituted the current writing of the continent of India in B.C. 250, while a similar, if not identical, character is seen to have furnished the prototype of all the varying systems of writing employed by the different nationalities of India at large, from Sind to Ceylon, and spreading over Burmah, till the Indian Páli meets Chinese alphabets on their own soil in Annam. In conclusion, Mr. Thomas pointed out the importance of the discoveries of Norris and Caldwell, derived from completely independent sources, regarding the Scythic origin of the introductory Indian alphabets.

No substantive article was ever prepared or published in further development of the somewhat comprehensive theory thus enunciated; but its purport has been quoted with seeming approval, and, as far as I am aware, without hostile comment in France and Germany. The subject has likewise been discussed at two several meetings of the Asiatic Society of Bengal. With the general tenor of these quasi conversational proceedings I have no possible cause of dissatisfaction. Naturally, the living representatives of the Indian Aryans resented any notion of their ancestors having borrowed, even more convenient mechanical vehicles for the expression of thought, from the ignorant Dravidians of the south; but the facts are cumulatively against them, especially

¹ Journal Asiatic Society, Bengal, and Meeting, 6th Feb., 1867, p. 33.
² The subjoined quotation is in so far a virtual reproduction of my letter, inviting the discussion, in situ, of the comparative priority of Indian alphabets, which was read at the Meeting of the Asiatic Society of Bengal, on the 5th February, 1867. I have taken thus much of liberty with the printed report, as to rectify the singular error of the local press, which contrived to arrange my data in the directly opposite sense to the concurrent argument; and as chance would have it, by a casual transposition of the descriptive headings of the alphabets, to obscure completely the whole question, either to Eastern or Western comprehensions. I have, perhaps, been over-confident of the strength of my position, in abstaining, until this moment, from any protest against an editorial blunder, which, in mild terms, left me in a complete minority. But I am quite experient to various this convented version as a basic for future discussion.

content to revive this corrected version as a basis for future discussion.

"I am glad to find that my notice of the derivation of Arian alphabets attracted attention, and I am most curious to learn the course the discussion took at the Meeting of the Asiatic Society of Bengul; more especially as I am now following out the Indian section of the inquiry, and have arrived already at some unexpected results, tending to confirm the original Dravidian derivation of the Sanskrit alphabet. The readers of our Journal will not fail to call to mind that Prinsep, in his early comments upon the Lat alphabet, pointed out that, in many instances, the aspirate letters were formed by a duplication of the lines of their corresponding simple letters. The question was not raised as to when these aspirates had been designed, but the inference was, that they had been formed simultaneously with the simple letters, and out of the same elements. I have a different theory to propose, which I submit for the examination and comments of your members: it is to assume that all the simple letters were Dravidian, and constituted a complete and sufficient alphabet for that class of languages, while the aspirates were dialects, as the Sanskrit in after-times added its own-sibilants to the latter alphabet.

as they have now an opportunity of selecting new adversaries

A glance at the subjoined comparative alphabets will show the twenty consonants (out of the full twenty-one) of the Dravidian system, as opposed to the thirty-one consonants of the Prakrit of Asoka's edicts. Of the additional aspirates of the latter scheme, two only can in any way claim to be ordinary duplications, the chh and th; while a more simple origin might be sought for the latter in a common circle: dh, dh, and ph may fairly be taken as intentional modifications of their corresponding normal letters; but kh and gh, like th and th, have more in common as fellow aspirates than association with their own leading consonants; and, finally, jh and bh seem to have been unfettered adaptations. The s (h) again differs from the y ( $\triangle$ ) only in the reversal of the leading lower limb. As the alphabetical data, upon which alone we have now to rely, are derived from inscriptions embodying a different language, and dating so late as B.C. 250, we can scarcely expect to recover the missing Dravidian consonants; but one, at least, of the yowel tests is significant in the extreme. The Dravidian vowels, as contrasted with the Scarbeit cories by Coldmell arrange themselves as follows: with the Sanskrit series by Caldwell, arrange themselves as follows:-

Sanskrit,  $a, \overline{a}, i, \overline{i}, u, \overline{u}, \underline{r}i, \underline{r}\overline{i}, \underline{l}r\overline{i}, -, \overline{e}, \underline{a}\overline{i}, -, \overline{o}, \underline{a}\overline{u}, \underline{n}, \underline{a}h$ . Tamil,  $a, \overline{a}, i, \overline{i}, u, \overline{u}, -, -, -, e, \overline{e}, e\overline{i}, o, \overline{o}, -, -, -$ .

"The value of the simple e, in the Lat character, admits of no doubt, the outline of the letter takes the form of >, while the elongated vowel is constructed by a duplication of the sound, effected by the addition of a medial e, thus  $\triangleright = ee$ , apparently the original Dravidian  $\tilde{e}$  (or possibly  $e\tilde{e}$ ), but which, in Asoka's inscriptions, is made to do duty for  $a\tilde{e}$ . In the more distinctly Sanskrit adaptations of the Devanágari Bactrian alphabet, the initial a (9) formed the basis of all the other vowels, whose varying values were discriminated by their several vowel marks.

"I am unwilling to enlarge upon an avowedly speculative suggestion, but I think few will fail to detect the contrast between the archaic crudeness of the simple letters and the more complicated and cursive forms of the aspirates in the Lat alphabet. Had the latter class of characters uniformly followed the typical design of their corresponding simple letters, there would have been more reason to have assumed a simultaneous and congruous initiation; but the introduction of anomalous signs among the *gutturals*, the remarkable cursive development assigned to the aspirates, as opposed to the stiff outlines of their simple prototypes (an advance equal in degree, but less obviously marked in the *dh* and *dh*), and the inconsistent development of the *bh*, upon the basis of the old *d*, all seem to indicate a later and independent elaboration of the aspirates. THE PRAKRIT OR LÁT ALPHABET.

THE NORMAL DRAVIDIAN ALPHABET.

Consonants. Consonants. 7 kh d d chh E H jh "  $\xi j$  " ს ს*ph* "ს | Vowels. y a · i | 26 Medial Vowels. Medial Vowels.  $+ k\acute{a}$ , + ke, + ki,  $+ k\acute{i}$ , + ku.  $+ k\acute{a}$ , + ke, + ki, + ki, + ku. Sanskrit additions to the Lat alphabet, n=1, H=1.

in the more advanced "Scythians" as their possibly later teachers, who would equally, and more definitively sustain the argument of priority in the art of writing in India, against the intrusive Vedic Aryans, whose education, by their own admission, had been greatly neglected up to the period of their entry into the land of the seven rivers.<sup>2</sup>

But to revert to the old data upon which I based my conclusions on this branch of the subject, nothing could have been more graphic, in the whole history of literary events, than the unpremeditated concert of evidence, gleaned in different lands, from hopelessly severed starting-points; presented, on the one part, by Mr. Norris's decipherment of the Scythian Tablets of Darius, at Bihistún, and the almost simultaneous production of the results of Dr. Caldwell's patient researches in situ into the languages of the South of India, which, on examination, developed such strange identities of verbal and grammatical formations, as to authorize the representatives of the old and the new to say, essentially, we are at one.<sup>3</sup>

Nor could anything be more striking as a second and subdued parallel, in the same direction, than Dr. Caldwell's detection of the Drávidian element in the Brahui form of Belúch speech with the associate testimony of our coins as to the sustained and persistent use of the Páli, or Lát alphabet, which descended in the ordinary course to the Greeks, with their outlying possessions in Arachosia, and which held its local dominancy, even to the competitive triumph over the elsewhere universally-adopted Bactrian writing of proximate lands.

<sup>&</sup>lt;sup>1</sup> Muir, vol. ii., edit. 1871, pp. 423, 438, 487, 488. The succession of occupants, now conditionally accepted, runs: 1. The Forest tribes; 2. The Dravidians; 3. "A race of Scythian or non-Aryan immigrants from the N.W.;" 4. The Aryan invaders.

Monogram in Chaldeo-Pehlvi, ND.

Reverse—The usual Parthian type of the king seated on his throne holding out a bow. Monogram, A (Tambrax, the capital of Hyrcania). Legend in imperfect Greek, BAZIAETZ METAZ ZANABapous.

Date in the field FIT (313 of the Seleucidan era = A.D. 2).

Associate Bactrian Coin of Sanabares.

Copper. Weight, 111-5 grains. British Museum. Unique.

Obverse—Head of king to the left, lightly or meagrely bearded, wearing the Parthian cap studded with jewels. Close fitting yest, with jewelled collar, and a boldly ornamented border to the outer comment. Legand, BANTATON MARKETS.

to the outer garment. Legend, BANIAETE μεγας.

Reverse—Winged figure of Victory, to the right, holding out chaplet, as on the Bactrian coins of Mauas, Azas, &c. Legend, ZANABAPOTE:

Prinsep's Essays, ii., p. 215. Engravings of both pieces are to be found in the Numismatic Chronicle for 1871, pl. vii.

This king's name is supposed to be identical with that of Sanabassar, "the ruler." — (Esdras, i. ii. 12, 15; iv. 18, 20. Ezra, i. 8, 11; v. 14, 16.) The derivation of the term has hitherto been considered uncertain; the dictionaries give one of its variants as "Ignis cultor"; but the simple version here seems to be "light," with the conjunction of from "to bear," or "twith fire," in the Biblical form. Though the as a Semitic word might seem out of place in combination with an Aryan termination, I should feel no difficulty in this respect, as the languages were conterminous and interchangeable in many quarters. Sand was latterly so established a titular term that we find the and will many on monograms, and Sand ul Millat, "light of the faith," on the coins of the Ghaznavides.—J.R.A.S. ix. 367. The Armenians speak of "Sanassor," son of Sennecherim. (Moses of Khorene, i. cap. 23, p. 103, French edition, and cap. iii. p. 145. St.-Martin, Armenie, i. 411, mentions Sanadroug, "the Izates of Josephus.",

carry it into Hyrcania, or so much further on its way towards those essentially ancient seats of Aryan civilization on the Oxus, the archaic existence of which has lately been confirmed by fresh and independent evidence, in amplification of Sir H. Rawlinson's discoveries in 1866, prominently

1 "The belief in a very early empire in Central Asia, coeval with the institution of the Assyrian monarchy, was common among the Greeks long anterior to Alexander's expedition to the East, and could only have been derived from the traditions current at the court of the Achæmenian kings. This belief, again, is connected through the names of Oxyartes and Zoroaster with the Iranian division of the Aryan race, and receives confirmation from the earliest memorials of that people. . . It is with the Eastern Iranians, however, that we are principally concerned, as the founders of Central Asian civilization. This people, on the authority of the Vendidad, may be supposed to have achieved their first stage of development in Sughd. Their language was probably Zend, as distinguished from the Achæmenian Persian, and somewhat more removed than that dialect from the mother tongue of the Aryans of the south. A more important evidence, however, of the very high state of power and civilization to which they attained is to be found in the information regarding them preserved by the celebrated Abu Rihan Al Birání, himself a native of the country, and the only Arab writer who investigated the antiquities of the East in a true spirit of historical criticism. This writer supplies us with an extensive specimen of the old dialects of Sughd and Kharism. He gives us in those dialects the names of the twelve months, the names of the thirty days of the month, and the five Epagomenæ, together with the names of the signs of the Zodiac and of the seven planets, and lastly of the mansions of the moon. A portion of his nomenclature is original, and offers a most curious subject for investigation; but the majority of the names can be compared, as was to be expected, with the Zend correspondents, and, indeed, are much nearer to the primitive forms than are the better known Parsee equivalents. According to Abu Rihan, again, the solar calendar of Kharism was the most perfect scheme for measuring time with which he was acquainted; and it was maintained by the astronomers of that country that both the solar and lunar Zodiacs had originated with them, the divisions of the signs in their system being far more regular than those adopted by the Greeks or Arabs. . . Abu Rihan asserts that the Kharismians dated originally from an epoch anterior by 980 years to the era of Seleucidæ, a date which agrees pretty accurately with the period assigned by our best scholars to the invention of the Jyotisha or Indian calendar."

—Quarterly Review, October, 1866, p. 488, etc.

This last is, perhaps, the most interesting item we gain from Al Biráni's revelations. That there should have existed, in Khárism, a serial system of dating, commencing from 980 years anterior to the official epoch of the Seleucidæ (312—311 B.C.) = 1304 B.C., was startling enough; but it is seldom that a given arithmetical problem obtains such definite results as to establish, beyond its own mission, so distinct an identity between scattered and severed branches of one and the same section of the human family; and it is something more than a curious coincidence to associate with this independent method of reckoning the fact that the Oriental world has been wearying itself, for a long time past, to explain whence, how, and why, a fixed sacrificial date, variously calculated by modern astronomers, and possibly, but imperfectly, sustained in the transmuted versions of the old texts, should have developed so close an identity, in its latest and most matured average, with the original numbers of 1304 B.C.; but such would seem to be the result of the independent tests applied to the Jyotisha observation of the Colures, still in use in the Vedic rituals of India under the

confession of the later Brahmanical exponents of the ancient creed.

noticed in my essay on Sassanian Inscriptions. Dr. Sachau, to whom the Oriental Translation Fund has lately confided the preparation of a critical edition of the leading MSS. upon which Sir H. Rawlinson based his researches, has already made vigorous progress beyond the fettered range of a single work, and will doubtless, in due time, give the world a very comprehensive account of our proper Arvan cradle.2 Meanwhile, we welcome a contribution from the improved text of the Arab geographer, Al Istakhri,3 which affirms independently the early traditions of Aryanism of speech in those distant lands, and brings me face to face with an identification, which may chance to prove of considerable importance in the general inquiry: that is, the association of the ancient name of the kingdom of Khárism itself,4 with the misinterpreted modern

R. Murchison's Address, 1867, p. 38.

<sup>1</sup> Trübner & Co., London, 1868, p. 120. See also Num. Chron. vii. N.s. p. 143. Since the above text and associate notes were set up in type, Sir H. Rawlinson has continued the publication of his expositions of the ancient Geography of the Oxus, in a paper contributed to the current number of the Edinburgh Review (Jan., 1872), from which I extract the subjoined notice; but, in explanation of a (Jan., 1872), from which I extract the subjoined notice; but, in explanation of a somewhat dubious expression in the context, I am given to understand that the emplacement of the original "Oromasdian" Hapta Hindu on the Upper Oxus, is not in any way to be understood to conflict with the later Vedic designation of the Saptu Sindhu of the Panjab.—"As these identifications are all new and contravene the criticism of the last hundred years, it may be necessary to cite some authority in their support. First, then, for the application of the name of Hapta Hindu, or 'the seven rivers,' to the Upper Oxus, there is the direct authority of Abu Rihan." See Elliot's Historians, i., p. 49. "India, or the Panjab, had been previously understood by the critics." (p. 13.)

<sup>2</sup> Dr. Sachau says:—"The most valuable part of Al akbar el Bakiya seems to me that which refers to the Central Asiatic Mesopotamia, the country between the Oxus and Jaxartes, and its southern and northern centres of civilization, i.e. Sughdiana and Khiwarizm. Biráni's information on this subject is alike new and important, for these countries were the homestead of Zoroastrianism and the focus of Central Asian civilization, which, shortly before it was trodden down by the Mughals and Tatars, struck a traveller, like Yákút, with admiration. By the help of Birúní we shall be able to trace the outlines of the dialects of Sughdiana and Khiwarizm, and to bring back the history of those countries."-

Academy, Nov. 1, 1871.

4 "In the Scythic version of the Behistun cuneiform inscription of Darius, the name of the province of Khárism is expressed by 'Varasmija,' admitting a free and optional interchange of the consonants m and v or w; the parallel Persian term of "Huzvárish," ordinarily applied to one of the divisions of Pehlvi writing.¹ If the archaic Oriental names, which I have subdued into a foot-note, confess to an identical derivation and primary purport, we may have to bring the written language, the cognate alphabet embodied on the banks of the Euphrates,² into closer relations with the undetermined palæography of the Eastern nidus.

For a long time past a vague impression has prevailed that the sister dialect, expressed in the kindred Pehlvi character, might likewise be connected with the geographical limits of the less disturbed settlements of the Aryan Fire-worshippers.<sup>3</sup> A curious confirmation of this supposition has lately been contributed by the publication of the Arabic text of *Ibn Khordádbah*, a man in a manner born in the faith, as his name implies, who classes the sanctuaries of Zoroastrianism under the emphatic topographical designation of the "land of the Pehlvis." I reproduce the passage from the excellent French translation of the *unique* Oxford MS. by M. Barbier de

cunciform text reproduces the name more closely as *Uvarazmia* or *Uuarazmish.*"—(Mr. Norris, J.R.A.S. xv. pp. 28, 97, 191.)

Mr. Norris and myself have since discussed this question, and I find that he was under the impression that he himself had already conceived such a solution. However, as we have both sought for any published declaration to that effect, we are quite content to concur in the probable coincidence now put forth.

<sup>1</sup> Destir Hoshangji Jamaspji, in his Oimydk, Bombay, 1867, preface, p. iii., asserts, that "Huzváresk means nothing, and can neither be explained from the Persian nor from a Semitic language." The latest Parsi attempt at the explanation of the term is that of Destir Sanjana, who transforms it into Huzvekhaldea, i.e. the Chaldee language.—(Dr. Haug, in Trübner's Record, Nov.30, 1871, p. 75.)

<sup>2</sup> "It is to be written in the writing of the Avesta, or in that of Sevat (Chaldæa), which is uzvársh."—(Haug, p. 42, quoting J. Müller.)

3 "Dilem was the Media inferior, Mazenderan and the countries between the Caspian and the Tigris, one of the original seats of the Pehlvi (Heeren, Act. Soc. Gött. xiii.). Dilem was also a retreat of that language. In the breaking up of a great empire, the institutions of the conquered race always linger in the extremities. The Caucasus, the country of Derbend, Segestan, and Kerman, thus sheltered the ancient language and religion of Persia, and thus the mountains of Dilem retained till the tenth century the worship of fire, and perhaps, therefore, the Pehlvi, with which that worship had been connected."—James Morier, Persia, etc. (1812), pp. 288, 406. See also Malcolm's History of Persia (1815), i. p. 203; Ouseley's Oriental Geography, pp. 141, 146, 195; and passim, on the subject of languages, pp. 76, 114, 143, 152, 159, 174, 251; Rawlinson, J.R.A.S., x., note, p. 143; Haug, Glossary, p. 34.

Meynard (Journal Asiatique, 1865, p. 278). "Pays des Pehlevis—Hamadán, Dinavar, Nèhavend, Mihrdjánkadak, Maçabadán, Kasvín. Cette ville, qui est à 27 farasangs de Rey, forme la frontière du Deilem; elle comprend la ville de Mouça et la ville de Mubarek. Zendján, selon les uns, est à 15 fars., selon les autres à 12 fars. d'Ahbar; Essinn, Jailasán et le Deilem." (See also p. 254, ibid.)

But this is far too large a subject to be treated incidentally, or in subordination to our present inquiry. I therefore revert to the special subject of this paper, and proceed to describe the coins figured in the illustrative plates; as introductory, however, to which, I prefix comparative Tables of the Pehlvi Alphabet, exhibiting (I.) the limited number of simple signs in use upon the currency of the Arabs, and (II.) the amplified and discriminated characters employed by the Pársís at the present day.

I. COMMUTABLE SOUNDS OF THE NORMAL LETTERS ON THE COINS, INCLUDING THE LATER PERSIAN DEVELOPMENTS.

REVERSE.

There is some doubt about the correct attribution of this Mint. I have satisfied myself that بيش is the preferable transcription; but the question still remains, as to what locality the designation applies. I had suggested, as the nearest sound, Baiza, but Dr. Mordtmann contends for بسا or أسبا There need be little difficulty in reconciling these two readings, taken by themselves, as Ibn Khordádbah tells us that Fasa was also called

1 Dr. Mordtmann has hitherto enjoyed the exclusive privilege of describing the Constantinople collections. I am glad to see that the Turks are beginning to appreciate Numismatics in their higher sense, and Western Orientalists may compliment them on the original work of Djevet E'fendi, which the French epitomist designates by the title of "Coup d'œil sur les Monnaies Musulmanes." This publication enumerates the following novelties from the cabinets of Subhi Bey, who has since been nominated to the Government of Damascus, where we may wish him every success, on such promising ground, in the further acquisition of new aids to history. 1st. Une monnaie coufique, frappée à Hertek (هـ تكت) chef-lieu d'un district du Tabaristan, dans l'année 28 de l'hégire (648-649), dont la légende circulaire portait بسم الله ربّي. Au nom de Dieu, mon maître. 2nd. Une monnaie coufique de l'an 27 (657-658), sous le Khalife 'Ali, dont la légende circulaire etait فالله إلى إلك إلان légende circulaire etait إلى إلله légende circulaire etait على الله المائة ال de l'an 38 et 39 (658-660), ornées de la légende circulaire du No. 1 : Au nom de Dieu, mon maître. In addition to these pieces, Djevet E'fendi quotes two coins of Abd' allah Zobeir, of Dárábgird, A.H. 60, and Yezd, A.H. 61. As the author acknowledges his inability to read the Pehlvi legends, I need not stop to contest his reproduction of عبد الله ابن زبير امير المومنين, the concluding title of which legend I have adverted to under Coin No. 5 .- Journal Asiatique, Août, 1862, p. 185. See also a notice in the Zeitschrift, 1863, p. 39, on Subhi Bey's Coins.

Asiatique, 1865, p. 274). But the definite emplacement of the site requires further examination. Hamza asserts that the Arabic name is a mere translation of the old Persian name of دراسفيد, "white gate," the true Persian name having been نسایک (Yákút, p. 127).

No. 5. OBVERSE.

It must be confessed that the Pehlvi version of the Arabian tribal قریش name very imperfectly reproduces the original sound of Koreish, and hence most of our Numismatists prefer to render the associate title by the conventional " امير المومنين "Commander of the Faithful," or by some equally strained interpretation. I have consistently adhered to my first suggestion, in support of which I may refer to Hamza Isfaháni's list, "De ordine chronologico regum Coreischitarum " (في سياقة تواريخ ملوك قريش), at the head of which he places Abu Bakr, with Omar, Usmán, Ali, and Moavia, in succeeding order (Hamza Ispahanensis, ed. Gottwaldt, St. Petersburg, 1844).

In appropriate conclusion to this specifically Kufic transition from the imitative Pehlvi series of the Sassanian Monarchs, I annex an outline of the leading Mint cities, whose title to coin money was recognized under the more settled occupancy of the Arabian administrators in Persia. This table is not only instructive in itself, in defining the geographical distribution of the recent conquests, but may prove of considerable value in testing, retrospectively, the ancient monetary centres, whose designations are so imperfectly preserved in the curtailed and transmutable forms of the old Pehlvi characters.

The subjoined list has been compiled by Col. Guthrie, and embraces the latest acquisitions of his own collection, those of the British Museum, and of Mr. Rogers, H.M. Consul at Cairo. The identification of the Mint cities has been revised by Senhor C. Camerino, a brother collector of coins, and an experienced decipherer of Arabic legends.

## TABARISTÁN COINS.

I have purposely reserved for separate notice two coins (Nos. 15 and 16) of Mr. Steuart's plates, which symbolize an independent series, whose types retain their provincial individuality in obvious contrast to the leading characteristics of the ordinary Arabico-Khusrúi mintages, and which, in their monetary isolation, revive the ancient traditions and historic romances of the later Aryan conflicts with the ever-advancing Turanians, in their enforced refuge on the southern shores of the Caspian,—a locality singularly favoured by na-

ture, whether in regard to aspect, climate, soil, commercial facilities, or ultimate means of defence,—an oasis in Eastern lands, which in its many obvious gifts impressed alike the Macedonian conqueror, the classic historians, and the Arabs, who styled it the "White India." In more modern times, its luxuriant forests obstructed the progress of the great Tímúr, who had to revert to the ethnic axes¹ for the passage of his hordes; and in later days, our own adventurous travellers recognized and rejoiced in the unaccustomed notes of its birds, and the sight of its richly variegated foliage backed by the open view of a northern sea.²

Having lately had occasion to examine the ancient geography of Hyrcania, with a view to determine the site of the capital of the Parthians at the outset of their national career,

"I contrived to delineate the head of one (peasant), at the same time representing the manner in which many carry the tabr (تر) or axe for cutting wood,

and the form of this instrument. It is headed with iron, the wooden handle being generally about three feet long. Here I may take an opportunity of remarking, that throughout most parts of this province nearly all the men, several women, and even little children, carried tabrs of this kind, either in their hands, like walking sticks, or resting by the curve on their shoulders."—Ouseley, iii. 269.

Pictet, "Les Origines Indo-Européennes" (1859), positively revels in the multitude of Aryan terms for this aboriginal implement, from which the province of Tabaristán took its name, and which he pushes up to the dubious sounds of Tabaristán took its name, and though in no wise repudiating the heavy stone period, which might have produced a less definite sound, yet still insisting upon the root tak, taksh, but admitting very broad latitudes when he comes to the Persian tabar, tawar, teper, topor, dabar, and Tabidan, Tapak, Taprah, Tapanehah, down to talavari, talátr, and some further undeveloped coincidences that may suggest themselves to the Euglish reader.

Kinneir, "Geographical Memoir on the Persian Empire," London, 1813; Sir J. Malcolm's History of Persia, London, 1815; Viaggi di Pietro della Valle, Lettera IV. Da Ferhabad e da Cazuin, 1618 a.D.; "Master Anthony Jenkinson" (1561 a.D.), Hakluyt's Voyages, i. pp. 386, 395; M. N. de Khanikoff's most conscientious recognition of other men's labours and exact definition of his own observations on the passes and later geography of this locality, in his "Asie Centrale," Paris, 1861. Finally, M. N. de Khanikoff has given a résumé of the results of M. Dorn's mission to Mazanderán in 1860 in the Journal Asiatique, 1862, p. 214.

I have incidentally met with some curious information bearing upon the general topography of the provinces of Gurgán and Tabaristán, which I may advantageously recapitulate on this occasion. The leading classical evidence, which is reproduced where needful, has for long past been embodied in print or otherwise fully accessible and open to modern criticism, with the single exception of Ptolemy's comprehensive geography of these Eastern lands, which has hitherto been strangely neglected.1 But, as a general rule, the statements of the Greek and Latin authorities have been tested by European commentators under the single issue of the internal limited and often conflicting testimony of the fragments which have come down to us. In these later days, we have for some time been in possession of very material aid in the more exact definitions and illustrations of the earlier Arabian geographers, whose published texts have recently been largely augmented and improved by our able and indefatigable continental coadjutors; and, finally, the travels of our own countrymen in these unfrequented regions, extending over more than two centuries, have furnished in anticipation a collection of data for the elucidation of much that was previously obscure and unintelligible in the primitive condition of the people who lived upon one of the most important pathways between the old and the new divisions of the Arvan families.

In entering upon the provincial definitions, we must start from the central point of the earliest capital noticed by the Greek writers. I am disposed to revert, in defiance of all new ideas and combinations, to D'Anville's natural identification of Arrian's  $Zadraearta^2$  with the town of Sári, which for so many ages irregularly contested with Amol the distinction of the title of the metropolitan city. The  $Za\delta\rho\acute{a}$  sufficiently accords with a probably faulty transcription of the imperfectly

<sup>&</sup>lt;sup>1</sup> There seems to have been a very prevalent idea that Hudson had reproduced the whole of Ptolemy's work. He has done so in regard to the text of certain localities, but for the bulk of the original he avowedly confines himself to very meagre extracts.

<sup>&</sup>lt;sup>2</sup> Ταῦτα δὲ διαπραξάμενος ἦγεν ὡς ἐπὶ Ζαδράκαρτα, τὴν μεγίστην πόλιν τῆς 'Υρκανίας, Ίνα καὶ τὰ βασίλεια τοῖς 'Υρκανίοις ἦν.—Arrian, Exp. Alex. iii. ω xxv.

traced native name; and the import and application of Kapta is more distinctly affirmed in Strabo's use of that section of the old name in its isolated form,1—a conventional term, the meaning of which so peculiarly associated itself with the class of fortification existing at Sári at the period of the siege by Antiochus the Great (circà B.C. 212), when Polybius describes the defences, with but slight modifications, as essential counterparts of the triple enceinte, which may still be recognized and reconstructed amid the ruins of the Persian Dárábgird.<sup>2</sup> But the latter author's transcription of the introductory name as Σύριγξ, brings us back naturally to the test of the ancient Aryan derivation of the term, which almost forces itself to the front in सार्ड, "Sáranga," a word of extended application,3 but which, in the present instance, may be allowed to divide its claims between a Peacock, or the more probable Herons, who may have been supposed to rejoice in the rice grounds of the open country, or to have affected the shallows of the three ditches of the walled city.

Availing ourselves of the materials exhibited in consecutive order in the following pages, we can now follow the victorious advance of the first Arsaces, with his extruded Parni Dahæ,4 from his rude stronghold, called after his own name, in the gorges of the mountains east of Gurgán, to his occupation of

<sup>1 &#</sup>x27;Η δ' Υρκανία σφόδρα εὐδαίμων και πολλή και το πλέον πεδιας πόλεσί τε αξιολόγοις διειλημμένη, ων έστι Ταλαβρόκη και Σαμαριανή και Κάρτα και το βασίλειον Τάπη, δ φασι μικρον ύπερ της θαλάττης ίδρυμένον διέχειν των Κασπίων πυλών σταδίους χιλίους τετρακοσίους.—Strabo, χι. c. vii. § 2.

2. Wlondin, La Danca plate 21 furnisher o plan via διακτικών και δι

<sup>&</sup>lt;sup>2</sup> Flandin, La Perse, plate 31, furnishes a plan and elevation of this ancient fortress, and traces—A. The central rock around which the defences were formed. B. Première enceinte. D. Restes d'un mur circulaire, formant la deuxième enceinte. E. Troisième enceinte. G. Fossé. The place had eight gates at equidistant points.

<sup>&#</sup>x27;s Wilson gives a very extended range of meanings to the combined word, but the preferable interpretation in this case would certainly seem to belong of right to the Herons, who reckon among their families a special class of "Ardea Sarunga." Carey.

<sup>4</sup> Τούς δ' οδυ εν άριστερα εἰσπλέοντι το Κάσπιον πέλαγος παροικούντας νομάδας Δάας οι νῦν προσαγορεύουσι τοὺς ἐπονομαζομένους Πάρνους εἶτ' ἔρημος πρόκειται

Δάας οι νύν προσαγορεύουσι τους επονομαζομένους Πάρνους είτ ξρημός πρόκειται μεταξύ, και εόρεξης ή Ύρκανία.—Strabo, xi. c. vii. 1. See also xi.c. viii. 2; c. ix. 2. ξπειτ' Ἄρτάκης ἀνηρ Σκύθης τῶν Δαῶν τινας ἔχων τους Πάρνους καλουμένους νομάδας παροικούντας τὸν Ὠχον, ἐπῆλθεν ἐπὶ την Παρθυαίαν καὶ ἐκράτησεν αὐτῆς; and xi. c. ix. 3. "Parthi, penes quos velut divisione orbis cum Romanis facta nunc orientis imperium est, Scytharum exules fuere. Hoc etiam ipsorum vocabulo manifestatur: nam Soythico sermone exules parthi dicuntur."—Justin, xli. i.

the fertile slopes of Tabaristán; I from whence he was to go forth, through the sheltering passes of the Pylæ Caspii, to his onward raids upon the dominions of the Seleucidæ, and the eventual foundation of an empire which should contest supremacy with the successors of the Cæsars. We need not trace in detail the minor stages of this initiative march, the localities themselves remain unchanged, in some cases under other denominations, as occupiers of conflicting nationalities superimposed their own special nomenclatures.

One instructive lesson we gain, by the way, in following the action of the immutable law of pressure downwards and westwards, and the enforced migration of tribes incident thereto, is the discovery that the ethnic capital of *Hyrcania*, which gave its "wolf's" name<sup>2</sup> to the old kingdom itself, should have been left so far behind, in the redistribution of boundaries, that its primitive site was not even included in the new Hyrcania of Ptolemy's period, but remained with its archaic designation under a slightly modified form to constitute anew the nucleus, and rehabilitate on its own proper ground the veritable province of *Jurján*, under the Arabs and their successors.

If I am right in supposing that the subjoined extracts sufficiently explain themselves in the geographical sense, it remains for me only to encounter a hitherto confessed difficulty, in fixing the site of the Parthian  $T \dot{a}\mu\beta\rho a\xi$  or  $T a\lambda a\beta\rho\delta\kappa\eta$ . This task, under fairly limited concessions, presents but few difficulties. We find the army of Antiochus the Great entering Hyrcania from a vague direction towards the south, marching in irregular detachments, and, finally, appearing before an extensive open town designated by the name of Tambrax, where there was a royal palace. Antiochus then learnt that the bulk of the troops of Arsaces and many of the

<sup>1 &</sup>quot;Erat eo tempore Arsaces, vir sicut incertæ originis, ita virtutis expertæ. Hic solitus latrociniis et rapto vivere accepta opiniono Seleucum a Gallis in Asia victum, solutus regis metu, cum prædonum manu Parthos ingressus præfectum eorum Andragoran oppressit sublatoque eo imperium gentis invasit. Non magno deinde post tempore Hyrcanorum quoque regnum occupavit, atque ita duarum civitatium imperio præditus grandem exercitum parat metu Seleuci et Theodoti, Bactrianorum regis."—Justin, xli. 4.

<sup>2</sup> S. Zend, vehrka. S. agan,

people of the country had taken refuge in Sári ("Syrinx"), a fortified city situated but a short distance off, and in a manner regarded as the capital of Hyrcania. There are no positive indications as to whether we ought to seek for the site of this position to the eastward or to the westward of the proximate asylum; but I should, primâ facie, infer the latter, as the advance of the Seleucidan army, though starting from Hecatompylos, seems to have penetrated Hyrcania by the pass of Fírúzkoh, and to have found itself in the ordinary course impinging upon a wealthy city somewhere between Amol and Sári, at a point not far removed from the modern Barfarosh. A locality which must always have presented natural advantages, calculated to recommend it for the seat of a commercial capital, a title it fully regained in later days by its own unaided merits, altogether in default of royal patronage; as we find Jonas Hanway, in 1743, designating it as "the capital of the province"; and Forster, in 1784, equally recognizing it without question as "the capital." We must remember that between the time of Alexander's appearance in these parts and the Parthian occupation there had been a change in the manners and customs of the dominant race; and whereas the Iranian dwellers in cities had established their regal domicile within the entrenchments of a strong place, the nomads of the north, on the other hand, kept their camps in the open. City walls would have ill suited a race who were wont, in the fullest sense of the term, to live on horseback.2

They possibly built a palace for their king, and distributed

"2 Equis omni tempore vectantur: illis bella, illis convivia, illis publica ac privati officia obeunt; super illos ire, consistere, mercari, colloqui."—Justin, xli. 3.

¹ The commercial centre of Hyrcania, on the proximate modern site, is thus described by B. Fraser:—"The rich and extensive plain in which Barfarosh is placed, affording very considerable supplies of those articles produced in Mazanderan, constitutes this spot a mart for those commodities; besides which, it is centrically placed in regard to Kasvin, Tehran, Shahrood, and the interior of Persia (being near two principal passes through the Elburz), as well as to Resht, the capital of Ghilan, also a place of very extensive trade. . The whole town is built in and surrounded by a forest of high trees; and none of the streets being straight, there is no one spot from whence a spectator can see to any distance. The buildings are indeed so screened and separated by foliage, that except when passing through the Bazars a stranger would never suspect that he was in the midst of a populous city."—B. Fraser, Caspian, p. 83.

their model light horse amid suitable pastures, more or less closely around the fixed rallying point. In such a state of society their dwelling places necessarily left but little sign or record behind them beyond the ashes of the camp fires or the impress of the horses' hoofs, and we might seek in vain for any permanent testimony of their passage through far more settled lands. I am, however, content to leave the exact position of Tambrax only approximately determined, because I am under the impression that the name itself simply expresses the Royal head-quarters, or the capital for the time being, in Hyrcania. The word, in effect, seems to constitute a quaintly-devised Greek form of the abbreviated name of the province of Tabaristán, consistently corresponding with the undefined Υρκανία μητρόπολις of Ptolemy, the Hyrcana of Ammianus Marcellinus,1 and thus explaining the retention of the previous designation of Ταλαβρόκη (a variant of Tambrax), in Strabo's text, where the easily-moved capital is stated to have been established [temporarily] at  $T\acute{a}\pi\eta$ . The custom of indicating the province at large, in general terms, without necessarily confining the seat of the ruling power to any given city within its boundaries, is seen to have survived and descended to the later coinage, where we meet with nothing in the entire Pehlvi series but the generic expression of Tabaristán.

It is pleasant, however, amid the coarse savagery of these northern hordes, to find them perpetuating, ex voto, the name of their founder, Arsaces, so that it became a more enduring title than many others of higher and more established pretensions.<sup>2</sup> Singular to say, under apparently identical motives, they retained the typical monogram of Tambrax A,—which has suggested the present inquiry—as one of their

<sup>1 &</sup>quot;Hic amnes duo pervulgati sunt nominis, Oxus et Maxera, quos urgente inedia superantes natatu aliquoties tigres, improvisse finitima populantur. Habent etiam civitates inter minora municipia validas, duas quidem maritimas, Socunda et Saramanna: mediterraneas alias, Azmornam (var. Amorna) et Solen, et his nobiliorem Hyrcanam."—Ammian Marcell., Ed. Wagner, xxiii. 6, § 52.

<sup>&</sup>lt;sup>2</sup> Justin, xli. 5. Sic Arsaces quesito simul constitutoque regno non minus memorabilis Parthis quam Persis Cyrus, Macedonibus Alexander, Romanis Romulus, matura senectute decedit, cujus memoriæ hunc honorem Parthi tribucrunt, ut omnes exinde reges suos Arsacis nomine nuncupent.

dynastic symbols. It appears and re-appears in the later coinages, as a nearly immutable constituent of the national heraldic device; wherever the rough camp coining machinery penetrated with the oft-times ephemeral hold of the conquerors, this ancient memorial of the second abiding place of the Arsacidæ, the territorial emblem of the first stage between Caterans and Kings, held its position: and, in the end, only fades out of Numismatic ken, when the more definite strung Bow, the pride of the ancient Parthians, is merged amid the chaotic lines of die-engravers, who servilely copied a device whose import they did not seek to comprehend.

I have now to present in detail the data adverted to in previous pages regarding the geographical mutations of the primeval Tabaristán, the classic Hyrcania, which in modern times is known by the name of "Mázanderán." These contributions to the previous history of the land range themselves under the following heads:—

I. The outline itinerary of Isidore of Charax.

II. The theoretical geographical definitions of Ptolemy.

III. The practical tests of the Arabian post distances.

IV. The illustrative observations of modern travellers.

EXTRACT I. ISIDORE OF CHARAX'S UPWARD ROUTE.

After "Κομισηνή."

10. Ἐντεῦθεν Ἑρκανία, σχοῖνοι ξ, ἐν ἢ κῶμαι ιά, ἐν αἶς σταθμοί.

11. Ἐντεῦθεν ᾿Ασταυηνὴ (var. Αὐσταβηνὴ), σχοῖνοι ξ΄, ἐν ἣ κῶμαι ιβ΄, ἐν αἶς σταθμοί: πόλις δὲ ᾿Ασαὰκ, ἐν ἣ ἸΑρσάκης πρῶτος βασιλεὺς ἀπεδείχθη· καὶ φυλάττεται ἐνταῦθα πῦρ ἀθάνατον.

12. 'Εντεῦθεν Παρθυηνή, σχοῖνοι κέ, ἦs αὐλων Παρθαύνισα ή πόλις ἀπὸ σχοίνων ς' ἔνθα βασιλικαὶ ταφαί Έλληνες δὲ Νίσαιαν λέγουσιν.—Isidore of Charax. Geog. Gr. Minores, Paris, edit. Dr. C. Muller, p. 251. See also Hudson.

This itinerary, of course, has no concern with the geographical definitions of the later Hyrcania; but omitting the progressive stages eastward, from Rai, along the southern open ground upwards and through the passes of Asterabad, it illustrates the onward section of the route into the hitherto obscure home of Arsaces in the passes of the mountains, so guarded from the south, but so freely open to the inroads of the northern hordes, and in continuation completes the distance to Níshapúr.

# EXTRACT II. CLAUDIUS PTOLEMY'S GEOGRAPHICAL LIST OF THE TOWNS OF HYRCANIA.

13. Together with the more important sea-board town of  $\Sigma$ apaµávvη, whose position is defined twice over in the Greek text as 94° 15′—40° 30′; the repetition seemingly aiming at the exact establishment of a fixed basis for other coast measurements, whose localities were less clearly marked.<sup>1</sup>

The rivers of Hyrcania are specified as the Μαξήρα (source, 98° 0—38° 20'; mouth, 97° 20'—41° 30'); the Σωκάνδα (Νωκάνδα) (mouth, 97° 20'—42° 0'); and the Oxus ("Ωξου ποταμοῦ ἐκβολαί), (mouth, 100° 0'—43° 5').<sup>2</sup>

<sup>2</sup> Pliny's list is as follows:—A Caspiis ad orientem versus regio est, Apavorteno dicta, et in ea fertilitatis inclytæ locus Dareium. Mox gentes Tapyri, Anariaæ, Stauri, Hyrcanii, a quorum littoribus idem mare Hyrcanium vocari incipit, a flumine Sideri. Citra id amnes Maxeras, Stratos, omnia ex Caucaso. Sequitur

regio Margiane, etc.-Pliny, vi. xviii.

¹ To show the licence permitted in the transcription into Greek of local Persian names, I annex a later reproduction of the native nomenclature. Excerpta ex Georgii Medici Chrysococcæ (about the middle of the fourteenth century A.D.). TAMHAPIZTAN. Αμούδ, '77° 10'—36° 35'; Σαριά, 73° 0'—36° 15'; Γαρτζά, 89° 0'—36° 40'; Γόρ (or Σδρ), 89° 0'—33° 0'.—ΚΟΡΚΑΝ. Ισταρβά, 79° 20'—37° 5'; Κοργαν, 82° 10'—38° 10'. Then Ντελάμ, i.e. Delam.—Hudson's Geog. iii. p. 5.

I have reproduced in the above abstract Ptolemy's list of towns, with the equivalents of his latitudes and longitudes reduced into English figures—almost without comment—as I am not about to enter into a disquisition on his system of geography, or otherwise called upon to reconcile the conflicting results of his chaotic first attempt at the scientific reduction of map projections. His longitudes are, of course, utterly worthless, and his latitudes to be received with extreme caution.1 Still, there is in the Greek text a curious vitality and rehabilitation, under due allowance for transfusion of speech, of the Eastern world as existing in his day. Nothing could be more striking than the number of Aryan names of places that we can recognize and restore amid the seemingly unintelligible lists of the Western compiler. But these are temptations which I may safely abandon to M. Pictet, and confine myself to the narrow limits of the Royal cities. The once established capital Tambrax I have already sufficiently adverted to, but those who are indisposed to see so violent a transformation from the generic designation of the "land of Axes" must take into account the facility of the Pehlvi transmutation of p, b, and v. The recognized Greek representation of b by  $\mu \pi$ , and the Scytho-Hellenic and other local versions of m b, illustrated in the vague pro-

<sup>1</sup> Colonel Yule has a curious note upon what he conceives to be Ptolemy's system of map-making. "It is evident that he first drew his maps embodying all the information that he had procured, however vague and rough it might be. From these maps he then educed his tables of latitudes and longitudes, and his systematic topography. The result is that everything assumes an appearance of exact definition; and indications on the map which meant no more than 'somewhere hereabouts is said to be such and such a country,' become translated into a precision fit for an Act of Parliament."-Cathay and the Way Thither. Hakluyt Soc. Publication, p. cli. On the other hand, we must hear what one of the most precise geographers of the present day has to say in favour of the rough system :- "Nous profitons de cette occasion pour faire observer que, tout extraordinaire que puisse paraître l'assertion que les longitudes fournies par une simple opération topographique puissent surpasser en exactitude celles qu'on obtient par des méthodes astronomiques, cette assertion n'en est pas moins vraie si l'observateur n'est pas un astronome consommé, et s'il n'a pas à sa disposition tous les instruments de précision indispensables pour obtenir des résultats d'une grande exactitude."-M. de Khanikoff, Mem., p. 30.

nunciation of Dambavend, as well as the elsewhere fatal defect of the total absence from the adapted Greek alphabet of any signs competent to reproduce the archaic sounds of ch and j. The terminal k need not any more disturb this attribution, as the final Pehlvi ? k is admitted to have had the force of a mere sh: even if more daring identifications might not point to the interchange of the final, as in Irák الراق and Irán الراق (J. Müller, Journ. Asiatique, p. 15), which would reduce the ethnic term into a mere plural of Axes تراق of Hyrcania, or other simple names of places derived from nature's teaching. It remains for me merely to say that I concur in Ouseley's somewhat hesitating identification of Kara Tapah with Ptolemy's Táλκa,¹ which is satisfactorily corrected in Strabo's Taπη. Αμαροῦσα, as Amol, can scarcely be contested; and without

"He escorted us to his own village, called from its situation on a tumular piece of ground, Kard-Tapeh or Tepeh (قرائية), the 'Black hillock,' distant from Ashraf ahout seven miles, and in the midst of an extensive level tract, of which the surface was now covered with water and moist clay to the depth of ten or twelve inches, but in summer formed a rich and very fertile plain. Rising above this, the Tapeh or 'mount' appeared like an island barely large enough to contain the houses that stood upon it; all light structures of wood, reeds and straw, except one emdrat, a mason-work edifice (of brick), which had been erected for the king's accommodation. . . . I had entertained some hopes of being able, in this Tapeh, to ascertain the position of Tapè, which Strabo describes as the principal or royal city of Hyrkania, advantageously situate within a little distance of the sea."—iii. 275.

Two difficulties presented themselves, however, to the traveller's mind: "the Turkish name," which he did not regard as an insuperable objection, and the absence of ruins, which he rightly met by the remark that "in the time of Strabo, the houses of this country were most probably constructed of very perishable materials, as in the tenth century after, when Ibn Haukal travelled, and as they are now in the nineteenth."

We have seen how great a latitude is to be allowed in the transcription of native names; but the Kala Tapah is not necessarily Turkish or Scythian: the interchange of l and r was never more free than in Ptolemy's list, where we find l used in Sári and l is freely admitted into Persian Dictionaries. The Hindustani equivalents are and تبرى And as regards the possible Palace on the hillock, we must remember that among these nomad tribes the rising ground, or small mounds, as the case might be, were always selected as the natural head-quarters of the chief.

laying any undue emphasis upon the possible 'Ασμουρνα and the resulting Ashraf, we may safely rectify the Μαίσοκα by the Persian , which brings us back to the snakes, whom ancients and moderns alike associated with the locality.

The rivers in their erratic courses, it must be confessed, present greater difficulties of identification; but there is one impression that forces itself to the front, that the Σωκάνδα can only have been some stream more or less associated with the site of the modern designation of Nokandah; the denominaimplies a variation of the course of a river, either by a convulsion of nature or a diversion by human efforts from an old channel; the name 1 could scarcely apply in these lands of timber towns to new foundations; and one of the most curious points in Ptolemy's version is that the Σωκάνδα river itself must clearly have joined the Μαξήρα before the latter reached the sea.2 Indeed it would "almost seem as if Ptolemy's informants, whatever names they applied to the two streams, referred merely to the two most important rivers of the country, which seem to have preserved their flow to later days in the modern Ain and Sári, forming a natural junction below the town of the latter name."3 This, at least, is what we should be justified in assuming on the authority of the prominently marked courses of these rivers in M. Kinneir's map.

<sup>1</sup> Some might claim to read the name as نوکن , but I prefer to follow the Greek, in making it one combined word. More especially, as there is authority for the term کنده , which must necessarily refer to ancient usage, in the typical "trench" of King Fírúz, who is reputed to have founded Amol, and whose "big cutting" still retains the name of فيروزكنده —Ouseley, iii. p. 310.

I am quite aware that Sir H. Rawlinson advocates the identity of the Sokanda with the "Ab-oskin of the Arabs." (آبِسَكُون aqua tranquila.—Vullers, p. 3.)

<sup>3</sup> Quintus Curtius also makes his two strangely-designated rivers of Hyrcania join each other (vi. iv. 7), and the almost fabled Zioberus, with its underground current, may have something in common with the newly excavated "Nokandah."

13.

EXTRACT III. ROUTE FROM TABARISTÁN TO JÚRJÁN. Istakhri, Goeje's edit., p. 216 (improved from other sources).

The other cities of Tabaristán off the main route are given . عين الهُمّ . 5 ; الرُّويان . 4 ; كُلُار . 3 ; سالوس . 2 ; ناتل . 1 as-1.

Dr.A. Sprenger's exhaustive work, Die Post- und Reiserouten des Orients, gives the route from the Atwal, and Albirúni in the same order, as "Amol, Mámatyr, Sáriya."—Plate vi.

Ouseley's Oriental Geography, which follows irregularly the real Istakhri, reproduces in general terms the above routes. I have accepted his correction (pp. 175, 182) for No. 5, which has been greatly disfigured by other copyists. See list of variants quoted by M. De Goeje, p. 216, and Sprenger, pp. 52-3.

The excellent edition of Yakút's Persian Geography by M. Barbier de Meynard, aided by B. Fraser's personal narrative,

Marhalat (day's journey).

enables me to fill in satisfactorily the locality No. 14, which is grievously distorted in all the leading authorities. On the same principle, I should not have dared to correct Istakhri's etc., No. 13, into Isidore's 'Ασαὰκ (Arsak), had not Fraser given us the true form in Ribat-i-Aishk, p. 453; and to the same inquisitive observer I owe the rehabilitation of the lost orthography of No. 12, which seems to have puzzled alike the Arabico-Persian Geographers and their modern annotators.

No. 7. The site of the wall against the Túrks, described by B. Fraser (*infrd*, p. 47), is prominently noticed by Albírúni, under a disfigured name, but in the correct locality, as the well-known old boundary between "Tabaristán and Júrján." (Sprenger's Map, No. 6.)

The preceding Arabic list of the names of places supplies a far safer basis for the identification of obsolete native designations than the crudely transmuted and foreign Greek version. 1. Amol may be doubtfully associated with the meaning of अमल "clean, pure." 2. ميله is given in the Dictionaries as "campus," and the ground around the site still consistently remains open to this day. 3. برجى seems to refer to some bastioned or fortified site, of which there were many after their degrees in these localities, even if the name might not claim to represent a small offshoot of the grand - البرج Elburj itself, which the Alexandrian geographer accepted as Βαράγγη. 4. Sáriah I have already attempted to associate with its domestic Herons. 5. فارسك obviously suggests a development of , Már, the ancient and locally cherished name for the classic Iránian Serpent. 6. Abádán, "abodes." in the plural form, is said to have an intensive sense, as prosperity, or flourishing, in the agricultural or resident understanding of the term. 7. The Tamisah of the Sháh Námah, which the Persians call نميسه opens a wider range

<sup>1</sup> Ouseley, who delighted in ancient identifications, and who had so many opportunities of tracing the old names in situ, quotes from the Tarikh-i Tabaristan a passage to the effect that "A'mul (or Amal) originally signified in the Dilami dialect the same as the Pehlvi hush "death, destruction," وأهوش و أمل iii. p. 310.

of conjecture. 8. Astarábád, which was supposed to derive its name from the "stars," has had of late to come down to a much more mundane designation, in the form of the "abode of mules." Yakut is distinct in his assertion of استراسم, and the Sanskrit correspondent readily declares itself in अश्वतर "mulus," while all natural probabilities point to the advantages of the locality for such stud purposes, more especially in the choice of Nisean horses, to improve the home-breed of that indispensable cross of the patient and sure-footed donkey, for mountain traffic. 9. Ribát i Hafs, the Arabic designation of the next station, probably merely reproduces the native name for the "hvæna," who may well have disputed the gorges of the mountains with the "wolves" who gave their name to (10) Gurgán itself. 11. The Dinárzári of the next stage seems to be a modern combination. 12. Armútali, the orthography preserved by B. Fraser, is given with so much hesitation by that author, that it will be wise to avoid speculation upon its derivation. 13. Ashak is fixed alike by the Greek itinerary, and the testimony of our modern travellers, as the fountain-head of the greatness of Arsaces. 14. The name of Samankán is of doubtful origin, but the old designation of (15) Asfaraáin is good Aryan in the form of Mihr-i-ján, "sun of life," while the new name is asserted, on the authority of Baihaki, to have been derived from the compound "shield-bearers." Asfar ( "a buckler," Ain. "law, usage." (Πελταστής.)

#### EXTRACT IV. RÉSUMÉ OF B. FRASER'S ROUTE.

Starting from the extreme point eastward, with which we are at present concerned, i.e. "Boojnoord (36° 12′ 20″)," the itinerary proceeds, "fifteen miles to Sareewán, Killah Khán (Semulghán).<sup>2</sup> The dangerous part of the journey commences immediately on quitting this place: there is a tract

Barbier de Meynard, p. 35.
 "I believe this is the place of Semulghan, which gives its name to the valley.
 The Fort receives its appellation from being the residence of the Khan."—B.
 Fraser, p. 591.

of more than ninety miles totally desert, through which various passes lead, by which the Tookománs ascend from their plains below, and carry their depredations into the northern provinces of Persia." Dehneh Derkesh (a narrow and rugged pass in the hills that divide the great Elburg range from the smaller mountains and valleys on the north), Chummun-i-Bansh Killah, (a plain of considerable extent, which is entirely desert, and sloping towards the west, opens into a still larger one, called, I think, the plain of Armootullee. Desert as it now is, there are scattered throughout it many burying-grounds, whose tombstones vouched in a dreary way for the existence of men long since passed away), Ribat-i-Aishk ("a ruined caravanserai situated on the slope of the right hand hills, a dismal and dangerous place"), Gurgán river, Gurgán (camp), Pisseruc1 (near which is a large square inclosure, which had once been the stronghold of a tribe of Eels, called Gereilee, with numerous Tuppehs of former villages. The ancient city of Gurgán (2 farasangs distant; Gumbuj-i-Káús described p. 613). Finderisk, Peechuck-Muhuleh (chief centre of a baluk). A'k Killah, "the white fortress, numerous hillocks and mounds, certainly the remains of former forts and villages. A'k Killah itself appeared to have been an extensive square stronghold. Asterabad,2 to Khurdmuhuleh (23 miles), to Nokundeh<sup>3</sup> (14 miles), to Ashruff

¹ This interesting specimen of a true forest town is thus further described. "Instead of dull mud walls and flat mud roofs corresponding exactly with the colour of the ground, to which we had been so long accustomed, we found here everything made of wood. . . The houses were constructed of posts, wattled and plastered with mud. . . Instead of a wall to protect the place, a deep ditch had been dug . . a hedge of reeds and creeping thorns, etc. . . on the inside served to render the defence more perfect, and it was indeed impenetrable to eavalry. The gates and portals were all constructed of wood; a wooden bridge was thrown across the ditch; the very domestic implements, instead of earthenware or metal, were here made of wood."—B. Fraser, p. 610.

<sup>2 &</sup>quot;The appearance of Astrabad differs from that of cities in the southern and more elevated provinces of Persia, as much as that of the respective surrounding countries from each other. The forest or thicket approach on every side to the very ditch; the houses are constructed chiefly of wood. There are no buildings, public or private, deserving of particular notice at Astrabad. The revenue derived from this little province does not exceed 12,000 tomans, or about £7000 storling."

<sup>3</sup> A scattered village in the forest. The houses, built "of frames of rudely squared wood, with uprights and beams, raised upon blocks 3 feet above the ground, with a straw thatch."

(26 miles). At six miles from *Nokundeh* is seen "the ruined wall formerly of considerable strength, and which once extended from the face of the hills to the sea, the boundary between Astrabad and Mazanderan."

(Near Ashruff, the ruins of Sufeeábád and the large reservoir in the hills.) Kara-tappah, 7 miles N., also described.

From Ashruff to Sar-i-púl-i-Nica (17 miles), open country, fine full stream, etc.

To Sári, 18 miles; one mile east the river Tedjen, stream broad and strong (Furrahabad, noticed) to Barfarosh, 30 miles, and onwards to Amol (22).

In addition to the description of the two coins of Tabaristán figured in the accompanying plates, I have endeavoured to complete the Pehlvi and Pehlvi-Kufic series of the *Ispehbeds* from all available sources.<sup>2</sup> The time at my disposal does not admit of my entering upon the difficult questions of conflicting renderings of the Pehlvi legends, or the complications incident to the use of a double system of dating—the one following the ordinary era of the Hijrah, the other depending

<sup>1</sup> Sir A. Burnes's route was over much of the same ground. After Boojnoord he mentions Kila Khán, in the district of Simulgán; Sháhbáz villago (38 miles), the source of the Gurgán river, the Atruck river, the Gumbuj-i-Kaus at Gurgán, Asterabad, Nokandah, etc. He further notices the recession of the southern waters of the Caspian (ii. 121), and adds, "during these twelve years they have retired about 300 yards, of which I had ocular proof." (See also M. de Khanikoff Mémoire, p. 39). Sári was avoided on account of the plague, but Barjarosh and its port on the Caspian are described (123), as well as the pass of Gudook and Fírúz Koh, the real Pylæ Caspiæ ("Alexander's route"), the greatest of the passes into Mazanderán, p. 130.

upon the local reckoning by the era of Yezdegird, commencing A.H. 32 or A.D. 651-2. I will therefore reserve any further remarks until after the appearance of Dr. Dorn's promised contributions to the study of the subject already adverted to.

# ROYAL ASIATIC SOCIETY.

#### PROCEEDINGS

THE FORTY-EIGHTH

## ANNIVERSARY MEETING OF THE SOCIETY,

Held on the 15th May, 1871,

MAJOR-GENERAL SIR H. C. RAWLINSON, K.C.B.,

PRESIDENT, IN THE CHAIR.

THE following Report was read by the Secretary:-In presenting, as is usual on this occasion, their Report on the proceedings of the Society during the last twelvemonth, the Council, though unable to show any material improvement in the number of subscribers, have some satisfaction in stating that there has been, at least, a slight increase of members during that period. The number of elections since the last Anniversary Meeting are eight resident and five non-resident members; whilst the losses, by death and retirement, amount to seven resident and two non-resident members; showing an increase of one resident and three non-resident members.1

<sup>&</sup>lt;sup>1</sup> Elections.—Resident: Major H. H. Godwin Austen; G. Branson, Esq.; L. Bowring, Esq.; R. N. Cust, Esq.; Capt. A. F. P. Harcourt; Dr. R. S. Mair; Sir D. F. M'cLeod; Prof. J. Pickford. Non-Resident: H. F. W. Holt, Esq.; C. P. Lutchmeepathy Naidu, Esq.; Moulvi Syud Imadad Ally; S. Harvey James, Esq.; Charles Grant, Esq.

Deaths.—Resident: J. Henderson, Esq.; Mrs. Manning; M. C. Morrison, Esq.; Sir Justin Sheil. Non-Resident: Capt. M. W. Carr.

Retirements.—Resident: Sir F. Halliday; Col. H. A. Ouvry; Gen. C. P. Rigby. Non-Resident: W. M. Beaufort, Esq.

In Mrs. Charlotte Manning, daughter of the late Isaac Solly, Esq., the Society has lost a member who always evinced the liveliest interest in everything that interests this Society, and very frequently attended its meetings. In 1856, she, (then Mrs. Speir) published, "Life in Ancient India," a book which combined careful study with an unusual grace of style, and stimulated many minds to an interest in Sanskrit writings. A year and a half ago she almost entirely rewrote this work, and it appeared under the title of "Ancient and Mediæval India," in an enlarged form, with the addition of much information from sources that had been only discovered in the last few years. It is remarkable for the accurate learning and the patient research which it manifests; and though Mrs. Manning was not acquainted with Sanskrit, her powers of discernment and judgment qualified her peculiarly for selecting the best authorities on the subjects that she dealt with, so that the book is very useful to the student, while her refined taste and her appreciation of the beautiful have rendered it also very attractive to the general reader.

Mrs. Manning was, however, not only distinguished by her literary productions. Her influence in society was of a marked kind. With a naturally keen enjoyment of social intercourse, and with very cultivated faculties, she had also a peculiar skill in drawing forth the intellectual elements, and the best qualities of those with whom she came in contact, and she took delight in bringing together minds in which she perceived points of harmony. Moreover, her ready sympathetic insight gave an extreme charm to her conversation. Her interest was strong in all original and conscientious labours in the fields of literature, science, and art. She also helped forward zealously various schemes for the improvement of education, and latterly had been occupied with efforts for the benefit of our Indian fellow-subjects, many of whom felt towards her a warm personal esteem,

mixed with sincere gratitude. Having the habit of extracting experience from all the events and phases of life, she gladly imparted from her stores of practical wisdom to those who were attached to her, and when her counsel was asked, she usually refrained from solving the particular problem, preferring simply to place before her friend a standard of right, in the confidence that by this means the desired result would be best attained. The balance and proportion in her nature, her quiet dignity, her retiring disposition, and her thoughtful generosity and kindliness, have left a powerful impression on all who knew her, and these characteristics rested on the firm basis of a calm enlightened faith, and an unwavering allegiance to duty.

Attempts have, at various times and by various means, been made on the part of the Council to induce a more numerous portion of the public to devote some of their attention to those branches of knowledge in the cultivation of which this Society, during the long course of its existence, has taken so prominent and so active a part. These endeavours, it is to be regretted, have not been hitherto as successful as might have been desired; and it cannot be denied that for many years less attention has been paid by the public at large to Oriental literature and antiquities, in this country,—close as its connexion is with the East—than has been paid on the Continent. The Council do not, however, despair of yet succeeding, by their earnest and unremitting labours, in promoting a livelier interest in, and a more accurate appreciation of, the results of Oriental research; and they earnestly appeal to those who participate in such pursuits for their hearty co-operation in popularizing the objects of this institution and increasing the list of its They cannot, on the other hand, lose sight supporters. of the consideration that it is mainly by the intrinsic merits and scientific value of its publications that this Society can

expect to retain that high position in Oriental literary and antiquarian research to which it has hitherto been so justly That nothing has been wanting in this respect during the preceding year, the Council confidently trust, is amply proved by the contents of the last number of the Society's Journal, published at the beginning of the present year. Although there has not perhaps been so large a supply of papers as the Council could have wished to select from for publication in the next number, which is now printing, still the meetings of the Society have never been entirely without communications of interest. Of these, some have already appeared in the Journal, viz., General Cunningham's Mathura Pali Inscriptions, with Professor Dowson's translation and remarks; Mr. A. Wylie's highly interesting account of the Buddhist Inscription at Keuyung kwan, in six different alphabets, and including a specimen in the Neuchih language; and Mr. C. P. Brown's account of the origin and chief tenets of the Jangams or Lingavats.

To Professor J. Pickford and Mr. C. E. Gover the Society has been indebted for papers attempting to establish a radical connexion between the Dravidian and Aryan groups of languages.

A second paper contributed by Mr. Gover contains a collection of popular songs translated from the Badaga tongue, with remarks on them; this paper being a continuation of a former essay on Canarese popular songs, by the same writer, noticed in last year's report. The songs now communicated are equally interesting and poetical with the Canarese songs, most of which had already been published—the text with a German translation and grammatical analysis—by Dr. Mögling. We must, however, regret that Mr. Gover has not chosen to give, along with his translation, the original text, which would have been a welcome addition to our knowledge of Dravidian literature.

At a recent meeting, Professor Chenery read a paper on a Manuscript in the Bodleian Library, containing a Hebrew translation, or imitation, of the first twenty-six Makámát of El-Hariri, by Judah ben Solomon, called Alcharizi, the author of the Tachkemoni.

The work which Professor Chenery is now publishing consists, like the Tachkemoni, of rhymed prose and of verse modelled on Arabic metres, the phrases of the Koran and the references to Arabic history and legend being replaced by phrases of the Bible and allusions to Biblical incidents. The author was born at Xeres in Spain, and flourished in the early part of the thirteenth century.

A specimen of the Âdi Granth of the Sikhs in the original text, with a translation and critical notes, has been communicated by Dr. E. Trumpp, who is now engaged in translating that important work, at the expense of the British Government.

At an evening meeting held on February 6th last, Dr. C. D. Ginsburg, before a very numerous attendance, delivered a lecture on the Moabite Inscription, in which he placed before the Society the latest results of his study of the Our learned President, on the same Dibon document. occasion, showed how the historical inferences drawn from the Moabite stone were entirely borne out by the Assyrian Annals recorded on the black obelisk from Nimrúd, now in the British Museum, which was a monument of nearly the same age as the Dibon monolith. Sir Henry also stated that the Moabite war, as described on that document, must have taken place from B.C. 849 to about 846, as appeared from the Assyrian Canon, the chronology of which was fixed by the record it contained of the great solar eclipse at Nineveh on June 15, B.C. 763.

Captain Burton, further, has communicated a collection of Syrian proverbs, with a translation and remarks; Mr. W. F. Mayers, a paper on the introduction of maize into China, with an introductory note by Dr. D. F. Hance.

Mr. R. C. Childers has read, at a recent meeting, remarks by him on some passages of the Dhammapada, with special reference to the question of Nirvána, and in support of his view that Nirvána is a state of blissful freedom from human passion on earth, followed by annihilation after death. He also submitted to the meeting an able paper by L. Comrilla Vijasimha Mudliar, a native of Ceylon, dealing with the origin of the Arthakathâs, or commentaries on the Buddhist scriptures. Both these papers, as likewise those of Dr. Trumpp and Captain Burton, will be incorporated in the next number of the Society's Journal, which will also contain the continuation of Dr. H. Kern's translation of the Brhat-Sanhitâ, of Lord Stanley of Alderley's Poetry of Mohamed Rabadan and Mr. H. F. Talbot's Assyrian Glossary.

The Council have to acknowledge, with their cordial thanks, the receipt of a number of valuable additions to the Society's library, consisting partly of Transactions of learned Societies in England and abroad, partly of works presented by their authors or other patrons of the Society.

From the Bombay Government the Society has received a copy of the Poems of Tukârâma; from M. J. Oppert, his Inscriptions de Dour Sarkayan; from Syed Ahmed Khan, his Essays on the Life of Muhammed; from Pandit Govinda Deva Såstri, his edition of the Bålaramayana; from Dr. G. K. Niemann, his Bloemlezing uit Maleische Geschriften; from the Rev. J. Kessler, his Introduction to the language of Madagaskar. To Lady Elliot we are indebted for Vol. III. of the late Sir H. M. Elliot's History of India, edited by Professor J. Dowson; to Mdme. Dora d'Istria, for copies of her Filetia et Arbenoré and Etudes Indiennes; to M. Garcin de Tassy, for Vol. II. of his Histoire de la Littérature Hindouie et Hindostanie; to Mr. E. Thomas, for his Chronicles of the Pathan Kings of Dehli; to Mr. C. Grant, for his Central Provinces Gazetteer; to Mr. Lepel H. Griffin, for his Rajahs of the Punjab. Mr. E. H. Palmer has presented a copy of his Catalogue of Arabic, Persian, and Turkish MSS. of Trinity College, Cambridge; Professor A. Weber, his treatise on the Râmâyana. From the Trustees of the British Museum has been received a copy of Dr. Wright's Catalogue of Syriac MSS.; from the Academy of Leiden, Vol. III. of Professor Land's Anecdota Syriaca; from the Batavian Society, a number of copies of Kawi Copperplate Inscriptions.

To Captain S. B. Miles, Assistant-Resident at Aden, the Society is again indebted for a very valuable donation, consisting of an Himyaritic bronze tablet, an alabaster sepulchral slab with a bas-relief figure and Himyaritic characters; a silver talisman or seal, likewise with Himyaritic letters engraven on it; a small brass figure supposed to be a Himyarite god, from its having been dug up at Mareb; two Ethiopic gold coins, and finally, two Himyaric coins, a silver and a gold one, the first hitherto discovered.

In now proceeding to take a brief and necessarily superficial survey of the labours of Oriental scholars during the preceding twelvementh, the Council need scarcely observe that the disturbed state of the Continent since the middle of last year could not but have occasioned a serious decrease of publications in this, as indeed in every branch of literary and scientific research. The publications of our own Translation Committee have had to suffer a delay for the same reason, M. De Slane having been prevented from issuing the fourth and last volume of his English translation of Ibn Khallikan's important Biographical Dictionary, while M. Zotenberg has been compelled to suspend the printing of the third volume of his French translation of Tabari.

As, after the completion of the latter work, which will consist of four volumes, a sufficiently large sum will still remain at the disposal of the Committee, they have entered into an engagement with Prof. E. Sachau for an English translation of Albirani's highly important work Al'athar

Albāķiya, which it is anticipated will be ready for the press in the latter part of next year.

A rare example of what true devotion to science may work, even in the midst of the chaos of war, has been shown by one of our foreign members, M. Garcin de Tassy, who has found it possible to go on with the publication of the second edition of his History of Hindi and Hindustani literature, two volumes of which have appeared, containing a vast amount of new and highly useful matter. Nor has that scholar allowed himself to be prevented from issuing his annual Discours d'ouverture, though not on this occasion from his professorial chair in the French capital, but from the quiet seclusion of a provincial town.

Northern Indian Vernacular philology has also, as usual, received some attention in last year's Journal and Proceedings of the Asiatic Society of Bengal, in Bâbû Pratâpachandra Ghosha's Contributions towards Vernacular Lexicography, and in short Kashmîrî and Gondi vocabularies by Dr. W. J. Elmslie and the Rev. J. Dawson. With regard to the Uriyâ, the language of Orissa, there has been some variance of opinion: Bâbû Kântichandra, to some extent backed by Bâbû Râjendralâla Mitra, contending that it is a sort of dialect of the Bengali, whilst Mr. J. Beames takes it to be, like the Bengali, an independent neo-Aryan language.

Dr. E. Trumpp's labours in translating, for the Indian Government, the Âdi Granth, have already been adverted to; it may further be mentioned that he is now printing, likewise at the expense of the Indian Government, a Grammar of the Sindhi, as compared with the North-Indian vernaculars. The first part of a compilation by Janamejaya Mitra, entitled Nuskhá i dilkushá, containing notices and selections from the works of 380 Urdu poets, was printed as long back as 1854, but has only lately been published, after the compiler's death, by his son, Bâbû Râjendra. A volume of Hindi Selections has also been printed by Sivaprasâda. Under the

patronage of the Bombay Government, the first of two volumes which are to contain a complete collection of the Abhangas, or songs of the Mârâthî poet Tukârâma, who appears to have flourished in the earlier half of the seventeenth century, has been published by Vishnu Parashurâm Shâstrî Paṇḍit, with the poet's biography in English by Janârdan Sakhârâm Gâdqil.

To Professor A. Weber we are indebted for an important contribution to our knowledge of Prâkṛit literature in a Romanized edition of Hâla's Saptaṣatakam, a collection of miscellaneous Prâkṛit stanzas, with a German translation and an exhaustive introduction on the phonetic and grammatical condition of the language; the work is printed in the Abhandlungen, or Memoirs, of the German Oriental Society.

As regards the cultivation of the classical language and literature of the Hindus, the members of the Society are probably aware from last year's Report that, owing to an increased governmental grant to the Asiatic Society of Bengal, the publication of Sanskrit (and Persian) texts in the Bibliotheca Indica had been resumed with renewed vigour. It is a matter for rejoicing to Orientalists in Europe that this commendable zeal has by no means slackened during the last twelvemonth, as will be seen from the following list of publications which have appeared in the course of the vear. Bâbû Râjendralâla Mitra has issued Nos. 23 and 24 of his edition of the Brahmana, and the 9th fasciculi of the Aranyaka of the black Yajurveda, both with Sâyana's commentary. Of the Tândya Brâhmana, with Sâyana's comment, parts 4 to 14, and of the Lâtyâyana Srautasûtra with Agnisvâmin's Bhâshya, parts 1 to 8, have appeared, both of which works are edited by Anandachandra Vedantavagisa; also three fasciculi of the Agnipurana, edited by Harachandra Vidyabhashana, and the 10th part of the Mimamsa Darsana, with Sabarasvâmin's comment, edited by Pandita Mahesachandra Nyâyaratna. The Gopâla Tâpanî, with Viṣveṣvara's comment, has been edited by Harachandra Vidyâbhûshana and Viṣvanâtha Sâstrî. Besides, the first part has appeared of the Sâmaveda Sanhitâ, with Sâyaṇa's comment, edited by Satyavrata Sâmaṣramî; the Gopatha Brâhmaṇa, edited by Harachandra Vidyâbhûshana; the Nṛisinha Tâpanî, with Ṣankarâchârya's commentary, edited by Râmamaya Tarkaratna, and of an English translation, by the Rev. K. M. Banerjea, of the Brahmasûtra, with Ṣankara's comment.

In the Bombay Sanskrit Series, conducted by Professors Bühler and Kielhorn, have been issued, by the latter, the second number of his Paribháshendusekhara by Någojíbhatta, containing the first part of the translation and notes; and, by Shankar P. Pandit, an annotated edition of Kålidåsa's Målavikågnimitra. Dr. Kielhorn has also published a Sanskrit Grammar for the use of the students at the Bombay and Poona Colleges. Dr. Bühler, on the other hand, has issued, jointly with Mr. R. West, the second volume of their Digest of Hindu Law, and is at present engaged in preparing for publication, in the Sanskrit Series, a new and critical edition of the Daṣakumâracharita.

Among editions of Sanskrit texts privately published by natives, the number of which rapidly increases year by year, though but a part of them reach Europe, the series of volumes issued by Bâbû Baradû Prasûda Majumdâra may deserve notice, including, during last year, Bhavabhûti's Uttararâmacharita, with a commentary by Târâ Kumârachakravartî; the Mudrârâkshasa, edited by Târânâtha Tarkavâchaspati; the Venîsanhâra, and second editions of Kâlidâsa's Raghuvamṣa and Kumârasambhava, with Mallinâtha's commentaries. Paṇḍit Târânâtha Tarkavâchaspati has issued the Vishnupurâṇa, with commentary, and a Bengali translation; the Mâlavikâgnimitra; Gangâdâsa's Chandomanjarî and Kedarabhaṭṭa's Vrittaratnâkara; vol. i. of the second edition of the Siddhântakaumudî, and the fourth and concluding part

of his Sanskrit-English Dictionary, entitled Sabdastomama-hânidhi. Of other works which have come to the notice of the Council, editions may be mentioned of the Sabden-dusekhara, with Bhairavamiṣra's commentary, printed at Benares; the Bhâgavatapurâna, with Sudhara's commentary, at Bombay; the Bhaṭṭṭkâvya, with Jayamangala's and Bharatamallika's commentaries, at Calcutta; the Muhûrtachin-tâmani, with commentary, at Lucknow; and the first part of Charaka's famous medical work, on which some valuable remarks are made in a paper read before the Bengal Society, by Dr. Mahendra Lal Sircar (Proceedings, 1870, p. 284).

At Madras also the presses have been busy in producing and reproducing Sanskrit works, though unfortunately in the Telugu character. It may be sufficient to mention editions of the Tarkasamgraha with Paṭṭābhirāma's commentary, called Nyâyabodhinî; the Vedântasûtra with Râmânuja's Vedântadîpa; the Átmabodhaṣâstra; Murâri's Anâghanâṭaka, and the Daṣopanishad.

Side by side with this multiplication of printed literature -a strong proof of the ever-growing demand for books among the natives of India, and, we trust, of an ever-increasing desire for acquaintance with the standard works of their ancient literature—the search for manuscripts has been carried on with laudable energy in some parts of India. Council were able to state in their last report that, in accordance with the scheme proposed by Mr. Whitley Stokes, and adopted by the Government of India, lists of MSS. had been printed at Benares, Calcutta, Bombay, and in Mysore. It will be satisfactory to the Society to learn that Bâbû Râjendralâla Mitra, to whom the task of examining MSS. discovered in the Bengal Presidency had been intrusted, has since issued two fasciculi containing notices, including the beginnings and conclusions, of about 360 Sanskrit MSS. A list of 108 MSS. purchased for the Bombay Government during the years 1867-69, has also been printed by Prof. G. Bühler, in Messrs.

Trübner's American and Oriental Record for November, 1870; and last, not least, Mr. A. Burnell has, through the same medium, completed his catalogue of Vedic MSS., forming part of that valuable collection which he last year so generously made over to the India Office Library. The same scholar has just been appointed by the Madras Government to compile a catalogue of the important manuscript collection of Tangore, which is reported by him to contain about 18,000 MSS.

In Europe Sanskrit studies have by no means been neglected during the past year. Dr. John Muir, with unwearied perseverance, has issued the fifth volume of his Original Sanskrit Texts on the Origin and History of the People of India, consisting of a series of papers contributed to the Society's Journal for 1864-6, and bearing mostly on Vedic theogony, mythology, and religious belief; with addition of a good deal of fresh materials, and a new essay on the life and manners during the Vedic age. Professor A. Weber has published, in the Memoirs of the Royal Academy of Berlin, a German translation of the second book of the Atharvaveda. and an essay on the Râmâyana, the purport of which is to show that there is a connexion between the leading story of that epic,-the rape of Sîtâ and Râma's expedition to Lankâ or Ceylon—and the Trojan legend as it underlies Homer's Iliad. To last year's Journal of the German Oriental Society (p. 393), the same scholar has contributed supplementary remarks to a former paper on the Jyotirvidabharanam, an astronomical work assigned to Kâlidâsa, though probably a different author from the well-known poet.

Professor W. D. Whitney, of Yale College, has furnished in the Journal of the American Oriental Society, the second and concluding part of his edition of the Taittiriya Prâtisâkhya, with its commentary, the Tribhâshyaratna, a translation, notes and excellent indices.

To Professor A. Ludwig, of Prague, we are indebted for a

volume on the Vedic Infinitive, containing a great deal of valuable grammatical matter, which would have been still more acceptable had the compiler added a translation to the vast number of passages quoted from the Veda, as by that means scholars would have been enabled more easily to verify his grammatical inferences.

Dr. G. Thibaut has published a short Sanskrit text, entitled Jaṭâpaṭala treating of the Jaṭâpâṭha, a particular mode of reciting the hymns of the Vedas; to which he has added a German translation and annotations.

Dr. H. Pischel, in a Latin dissertation, De Kâlidâsae Sâkuntali recensionibus, has attempted to show, in a very able, if not entirely convincing, way, that of the so-called Bengâli and Devanâgarî recensions, the two hitherto known versions of Kâlidâsa's drama Sākuntalam, the former is the more ancient and genuine. It is, however, to be feared that to decide this knotty question, Dr. Pischel had hardly sufficient materials at his command, though he has, no doubt, deserved well in again mooting the subject, and thus urging its final settlement.

Of Professors Böhtlingk and Roth's Sanskrit Dictionary, published at St. Petersburg, two more numbers, viz., 43 and 44, have been received during the last year, carrying the work on to the middle of the letter V., after the completion of which four more letters remain to be gone through.

A few more translations of Sanskrit works deserve mentioning. Professor H. Kern has carried on, in the pages of the Society's Journal, his critical translation of Varâha-mihira's Astrological work, the Brhat-Sanhitâ. Mr. R. T. H. Griffith has supplied us with a beautiful and pretty close English translation, in octosyllabic rhymed verse, of Vâlmîki's great epic, the Râmâyana. Of Dr. F. Hall's second edition of Wilson's version of the Vishnu-Purâna the fifth and last volume has been issued. Mr. E. Brandes, a Danish scholar, following in the wake of Hammerich, who,

in 1845, published the Såkuntala in Danish (of which a second edition appeared in 1858), has printed a neat Danish translation of King Sūdraka's interesting drama, the Mṛich-chhakaṭikā of which an English translation was published by the late Professor Wilson in his Hindu Theatre, and a critical edition by Professor Stenzler, of Breslau.

The field of *Dravidian* literature has found but few cultivators during the past year. Mr. C. E. Gover's lyrical translations from the Badaga, as read at these meetings, have been mentioned elsewhere. To Dr. H. F. Mögling, already favourably known by several Canarese publications, we are indebted for the first two chapters, in the Roman character, of Lakshmîşa's old Canarese rifaccimento of the Asvamedhaparva of the Mahâbhârata, the Jeimini Bhârata (Journal German Oriental Society, 1870, p. 309). The author had been placed by Wilson in the beginning of the thirteenth century. The reasons, however, adduced by Dr. Mögling, render it highly probable that he preceded Basava, who founded the Jangama sect, and broke the power of the Brahmans in that part of India, about A.D. 1000.

At Madras, the text of Bhaskara's Telugu version of the Râmâyana has been printed; and Mr. P. S. Râjagopâla has published a second edition of his conversational manual in Tamil and English, with the text, analysis, and translation of forty stories from the Kadâmanjarî. Mr. G. Garrett, Director of Public Instruction in Mysore, has published a manual of the ancient Canarese, entitled Sabdamanimanjari.

At Mangalore, a small Malayâlim and English dictionary, and the fourth edition of the Panchatantra in Malayâlim, with a glossary, have been issued.

As to the Literary Society of Madras, which in former times used to be the centre of Sanskrit and Dravidian studies in Southern India, the Council regret to have again to state that that branch of our Society has shown no sign of life during the past twelvemonth; and that, moreover, they have been

officially informed that, owing to want of encouragement on the part of the European residents, there is no prospect of the publication of its Journal being continued for some time.

In proceeding to take a rapid view of the labours in that Pråkrit dialect which has become the chief depositary of religious tenets that sway the minds of a very considerable portion of the population of Asia—the Pâli—it is highly gratifying to observe the steady increase of attention paid to so important a subject, especially in Ceylon, in Burmah, and throughout Europe. At the last anniversary the Council were able to state that, after some years of apparent inertness, the Ceylon branch of this Society had recommenced their operations with renewed vigour. These operations have been carried on ever since with decided success; that Society having published within the last fifteen months, three highly interesting numbers of its Journal. Among the articles they contain we may mention Mr. J. D'Alwis's paper, "On the Origin of the Sinhalese Language," in which that writer shows the Sinhalese to be an Aryan language; a lecture on Buddhism, by the late eminent Pâlî scholar, the Rev. D. J. Gogerly, with an introduction by the Rev. J. Scott, and notes by the Rev. D. de Sylva; an account and partial English translation by the Rev. S. Coles, of the Pârâjikâ, or first book of the Vinaya portion of the Tripitaka. Further, by Mr. L. F. Lee, five chapters of text and translation of the Bâlâvatâra, a native Pâlî grammar, of which that scholar intends to bring out a Romanized edition with an English translation; two inscriptions, about 350 years old, communicated, with translations and notes, by Mr. T. W. Rhys Davids; Specimens of Sinhalese Proverbs, by Mr. L. de Soyza, and a paper by Mr. W. Skeen, "On the Origin of the Srî-pada, or sacred Footprint, on the summit of Adam's Peak."

It will be remembered that the Government of Ceylon had lately resolved to have a catalogue compiled of all the Pâlî MSS. known to exist in that island, and had appointed a commission for examining places of archæological interest. Mr. D'Alwis, who has been intrusted with the compilation of the catalogue, has nearly completed his first volume, which, it is to be hoped, will add considerably to our knowledge of the materials for Pâlî studies. Messrs. Rhys Davids and Smither, on the other hand, had started, on behalf of the archæological commission, on an expedition to Tolomarua, which is reported to have been very successful, the ruins of several monasteries and a great many ancient inscriptions having been discovered. Considering how much of what is known of Indian history is due to Buddhist sources, and especially to those of Ceylon, the importance of an archæological survey of that island can scarcely be overrated, and it must, therefore, be satisfactory to the members of this Society to know that the lively interest taken in these researches by the present Governor, Sir Hercules Robinson, promises well for their hopes in that direction.

Another scheme, which had been conceived some years since, and is now being carried into effect, on the part of the Buddhist clergy of Ceylon, will prove of no less importance to Pâlî studies. It had been resolved that in every monastery the MSS. they possess of the Buddhist Canon should be carefully collated, and their variae lectiones noted in the best copy; and that, this having been effected, the MSS. containing the various readings should be sent up to a synod, when by their collation a critical and authorized text of the Tripitaka would be obtained.

As regards Burmah, it is a matter for congratulation to Pâlî students, that no less a personage than the royal head of that country is the most zealous promoter of studies connected with Buddhism and Pâlî literature. His Majesty, being himself the author of a Pâlî grammar, is now said to have resolved to have the whole of the Buddhist Canon translated into English.

The Pâlî text of Kachchâyana's grammatical aphorisms has

been issued, with annotations, by Dr. F. Mason, at Rangoon. This publication, though it has not satisfied European scholars, has, at all events, the merit of supplying, in a handy form, the whole of these important sûtras in probably as correct a text as is met with in an average Burmese MS.

In Germany, Dr. E. Kuhn, a young Pâlî scholar already favourably known by a specimen of Kachchâyana, containing the text and vritta of the Kâraka, or third chapter on the construction of the cases, has lately taken another step in the right direction by an excellent edition of the Nâmakappa, or second chapter of that grammar.

In France, M. Feer has contributed to the Journal Asiatique for May-June, 1870, another instalment of his highly interesting and instructive E'tudes Bouddhiques, including French translations from the Pâlî and Tibetan, of the Dharmacha-krapravartanam, the so-called Benares sermon, a chapter of the Buddhist scriptures.

In Russia, Mr. J. Minayeff has printed the text and Russian translation of the Pâtimokkha, a collection of the Laws of the Buddhist Priesthood, of which translations by Messrs. Gogerly and Beal are found in vol. xix. of the Society's Journal. Mr. Minayeff has added some valuable extracts from the Arthakathâs and from the Bhikkhunî pâtimokkha (the chapter relating to nuns); although the language in which the notes are given—his native tongue—is, unfortunately, known to but a very limited number of students. The same scholar has published the Vuttodaya, a Pâlî metrical treatise, founded on Sanskrit works of a similar nature.

In this country not less attention has been paid to Pâlî and Buddhism. Our own Society has, through its Journal, placed before the public several important papers bearing on these subjects.

The second part of vol. iv. contained Mr. R. C. Childers's Pâlî text, with a translation and critical notes, of the Khuddaka Pâtha, one of the chapters of the Buddhist scriptures.

To the number published a few months since, Mr. V. Fausböll, the Danish scholar and editor of the Dhammapada, has contributed two Jatakas, or legends relating to former births of Buddha, in the original Pâlî, with an English translation, critical notes, and some interesting remarks on the connexion of those fables with their Sanskrit versions, as found in the Panchatantra, Hitopadesa and other works. Mr. Childers's paper on some passages of the Dhammapada relative to the question of Nirvana has been mentioned before, as has been Mr. L. Comrilla Vijasimha's note on the origin of the Com-There are, besides, some mentaries on the Buddhist Canon. archeological papers bearing, either philologically or historically, on the same subject, viz., General Cunningham and Professor Dowson's Mathurâ Pâlî Inscriptions—which have also been dealt with by Bâbû Râjendra in the Journal of the Parent Society; -Mr. S. Beal's lecture on the Sânchi Tope, showing scenes and passages from the Vessantara Jâtaka to be represented in some of the sculptures of that monument; and lastly, Mr. A. Wylie's paper on the Buddhist Inscription of Keu-yung kwan.

Captain T. Rogers has translated, from their Burmese version, the Parables contained in Buddhaghosha's commentary on the Dhammapada; to this Professor Max Müller has added a new translation of the Dhammapada and an elaborate introduction, in which he inquires into the authenticity of the traditional accounts regarding Buddhaghosha and the Arthakathâs, and sets forth the importance of the Dhammapada for an exact comprehension of the Nirvâṇa, the Buddhist summum bonum.

A want, however, which has long been felt, not only by Pâlî scholars and Indianists in general, but also by the students of those languages which bear the mark of Buddhist thought impressed on them—a Pâlî dictionary—is at last about to be supplied by Mr. R. C. Childers. This work, which is now printing, is to be issued in two parts; the

Roman character being employed for the Pâlî words, whilst the Devanagârî is reserved for their Sanskrit equivalents.

Mr. H. Alabaster has issued a work on modern Buddhism in Siam, setting forth the views of an intelligent and enlightened Siamese on his own and other religions. Of this interesting book a second and greatly enlarged edition is already in preparation.

A manual of Chinese-Buddhist terms and proper names has been published by the Rev. E. J. Eitel. Finally, much valuable matter, chiefly drawn from Chinese and Tibetan sources, is contained in Professor J. Summers's new periodical, the Phænix.

Before passing to the various labours in the literatures of nations for whose chief development we have to look to the countries west of the Indus, it may not be inappropriate briefly to report on the progress made in historical and geographical research with regard to India. This important and fascinating field of inquiry has received more than usual attention at the hands of English scholars. Of Professor J. Dowson's edition of the late Sir H. M. Elliot's History of the Muhammedan Period of India, the third volume has appeared, carrying the work on from the death of Nasiru-d dîn, in 1260 A.D., to the invasion of Tîmûr in 1398 A.D. The amount of materials from Persian historians here placed, for the first time, before the public in the garb of a European language, is very considerable, including, as it does, translations, by the Editor, of Zîâu-d dîn Barnî's and Shams-i Sirâj 'Afîf's works, both bearing the same title of Târîkh-i Fîroz Shâhî; also of Sultân Fîroz Shâh's Futuhât-i Fîroz Shâhî, and extracts from other works bearing on that period.

Mr. E. Thomas, i Xis "Chronicles of the Pathan Kings of Delhi," a portly volume grown out of his original monographs on the coinage of the Pathan Sultans and their Bengal neighbours, with addition of such materials as have

since been discovered, has admirably shown how much the sparks of light elicited by numismatic and general antiquarian research may contribute to illuminate dark spots in the history of Eastern nations. The period in the history of Hindûstân illustrated in this work extends from A.D. 1192 to 1554, and comprises the rule of six dynasties of forty kings who succeeded in turn to the throne of Dehli.

Mr. Lepel H. Griffin's volume on the "Râjas of the Punjab," furnishes a connected account, drawn from official records, of the political relations of the British Government with the principal states of the Punjab, from the commencement of the present century.

To Colonel Meadows Taylor students are indebted for a

very useful manual of the history of India.

Of the Central Provinces Gazetteer, published in 1867, Mr. C. Grant has brought out a second edition, which, however, may almost be considered as a new work. It now, for the first time, appears in the convenient alphabetical form usual in gazetteers; and, moreover, contains an introductory and highly interesting sketch of the history and ethnology as well as of the social and geological condition of those provinces.

The first volume of a "Geography of India," published by General A. Cunningham, comprises the Buddhist period, extending from the time of Buddha to the invasion of Mahmud of Ghazni. In following up his own former labours in the same field, as those of Lassen, Wilson, Saint-Martin, and others, the learned officer has thus placed before the public the results of his inquiries during a long residence in India, and particularly of a four years' successful service as Archæological Surveyor, which must have especially qualified him to undertake so difficult a hsk.

The Society is no doubt aware that the Indian Government has lately instituted a General Archæological Survey of the whole of India, and that General Cunningham has again been called upon to conduct the commission appointed for that purpose. Arriving in India at the beginning of the year, that officer, with his staff, has commenced operations by re-examining the ruins of Mathurâ, and thence he has proceeded to Lahore, where he is at the present moment engaged in extensive excavations.

From the Madras Government, an interesting report, by Mr. J. A. C. Boswell, "On the Archæological Remains of the Kistna District," has lately been received by the Society, and partially read at a recent meeting. The most important portions of this paper were the remarks made on the pre-Buddhist remains, consisting of aboriginal caves near Karsupudi, and sepulchral tumuli and stone circles, which he supposes to be of Scythic origin, and which closely resemble those in the Neilgherries.

At Bombay, Mr. Burgess and Dr. Bhâu Dâjî have carried on their investigations, the latter having undertaken to revise the western Buddhist inscriptions, including that of Girnár. In an interesting number lately issued by the Bombay branch of our Society, that scholar has given a facsimile, transcript and translation, of an inscription discovered by Mr. G. W. Terry in the temple of Amranatha near Kalvana. The same number contains some remarks, by Captain E. W. West, on the fort of Panala, and a paper, by Rão Sâheb Vishvanâth Nârâyan, on serpent worship in Western India. Finally, some papers of archæological interest are contained in the Bengal Journal, including one by Mr. H. Blochmann on the Arabic and Persian Inscriptions in the Hûglî District; notes on old Delhi, by Mr. J. D. Tremlett: on Archæological Remains at Shâh ki Dheri, and the site of Taxila, by Mr. J. G. Delmerick; and a memorandum on, and tentative reading of, the Sûe Vihâr inscription near Bhâvalpûr, by Mr. E. C. Bayley.

It may be convenient in this place to draw attention to a work on the language of a tribe which, though now scattered

broadcast over the earth, clearly derives its origin from the plains of India. Mr. A. G. Paspati, a Greek physician at Constantinople, had published, some ten years since, a work on the language of the Gipsies in Turkey, of which an English translation appeared in the seventh volume of the Journal of the American Oriental Society (1862).

The author has lately brought out a new, and French, edition of his work, which is very much enlarged, and altogether re-written. With reference to this book, Drs. A. Mordtmann and A. F. Pott have contributed a paper to the Journal of the German Oriental Society (p. 681), containing some valuable additions and a few corrections.

Our knowledge of the nature of the Pahlavi language has received a valuable addition in Professor M. Haug's Essay, forming part of the introduction to an old Pahlavî-Pâzand glossary, edited under the auspices of the Bombay Government, by Destur Hoshangji Jamaspji Asa, high priest of the Parsis in Malwa. Dr. Haug's opinion is that the language of the Pahlavî version of the Avesta, when read, is an Iranian dialect, not materially differing from the modern Persian; whilst the written words, on the contrary, represent an Aramaic, or Semitic, dialect, with the exception, firstly, of certain Iranian prefixes and terminations, added to aid the memory in substituting the Iranian equivalents; and, secondly, of such Iranian words as, in time, may have crept in. Some remarks have been made on Dr. Haug's book, in the Journal of the German Oriental Society (p. 713), by Dr. E. Sachau, who, whilst rejecting many of the author's readings and etymologies, accepts his theories with regard to the origin and nature of the Pahlavî language.

In Professor F. Spiegel's "Iranian Antiquities," Oriental students will no doubt welcome an important contribution to Iranian research. This work, clearly taking as its prototype Lassen's "Indian Antiquities," is to be published in three volumes, the first of which has already appeared, containing

the ethnographical account and ancient history of the Iranian tribes, and the geography of their seats.

Professor F. Justi, likewise, in a University Memorial, has given a second instalment of "Contributions to the Ancient Geography of Persia."

The Persian publications in the Bibliotheca Indica, like the Sanskrit series, though not in the same degree, have been pushed on with more than usual vigour. Of Mr. H. Blochmann's excellent translation of Abul Fazl's Âin i Akbari, the supplementary volume of the same writer and politician's Akbar-nâmah, the fourth part has been published, as have likewise the 11th and 12th fasciculi of his edition of the text. Parts 13 to 18 have also appeared of Khâfi Khân's Muntakhab-al-Lubâb, edited by Maulawî Kabîr al-dîn Ahmad; the first fasciculus of 'Abdar Rashîd's Farhang i Rashîdî, edited by Maulawî Zulfagâr 'Alî; further, three fasciculi of Muhammad Sâgî Musta'idd Khân's History of the Emperor Aurangzîb Âlamgîr, and two fasciculi of Nizâmî's Sikandar-nâmah i Bahrî, both edited by Maulawî Âghâ Ahmad 'Alî.

In the Journal of the Bengal Society the late Major Fuller's translations from the Târîkh-i Fîrûz Shâhî are continued. Of native publications it may suffice to mention two small hand-books introductory to the study of the Persian language, printed at Lahore, by order of the Punjab Government, viz., the Fârsî-kî-pahlî-Kitâb and the Fârsî-kî-dusrî-Kitâb, the latter bring a kind of chrestomathy on a small scale, whilst the former contains easy sentences illustrating the grammatical construction and idioms of the language.

Professor J. A. Vullers has brought out a second, and much improved, edition (likewise written in Latin) of his Grammar of the Persian Language, as compared with the Sanskrit and Zend. The first edition of this work was published as long back as 1840, and has always been valued as a successful attempt at establishing an accurate appreciation of the extent of grammatical and phonetic coincidences

of the Persian with Aryan languages, by one who combines, as few others do, a sufficient acquaintance with at least some of the latter with a sound Semitic scholarship.

Ferîdeddîn Attâr's Pendnâmeh, of which a French version exists, by M. de Sacy, has been translated into German by Dr. G. H. F. Nesselmann, already known by his translations from Sadi and Hafiz.

After an interval of nearly twenty years, the late F. Rückert's text and poetical translation of Dshâmî's lovesongs have at last been continued in the Journal of the German Oriental Society (p. 563), where also a short account of Mirza Shaffî has been given by Mr. A. Bergé.

The list of already existing Catalogues of Semitic MSS. has received some important additions during the last year. Foremost stands the first volume of the Catalogue of Syriac MSS. in the British Museum, compiled by Dr. W. Wright, and containing accounts of, and extracts from, the Biblical MSS. and Service Books of the Nitrian Collection. The second volume of this work, which is nearly ready for publication, will embody the rest of the theological literature. The same scholar has communicated in the German Oriental Society's Journal (p. 599) a list of the Magdala Collection of Ethiopic MSS., formerly forming part of the Library of King Theodore, of Abyssinia, now in the British Museum.

Of Dr. Rieu's Catalogue of Persian MSS. of that institution, a large portion had been printed, when the sheets were unfortunately destroyed by the fire at Watts's printing-office; a mishap which has also delayed Mr. Lane's issuing the fourth part of his Arabic Dictionary.

M. B. Dorn has printed in the Memoirs of the St. Petersburg Academy, a short Catalogue of a number of Oriental, mostly Persian, MSS., bequeathed to the Asiatic Museum of the Imperial Academy by the late M. Graf.

Finally, Mr. E. H. Palmer has published a Catalogue of the Arabic, Persian, and Turkish MSS. at Trinity College, Cambridge; with an Appendix containing the Hebrew and Samaritan MSS. of the same library.

The usual, not undeserved, amount of zealous attention has been bestowed on the cultivation of Arabic literature, especially on the Continent. Professor F. Wüstenfeld's complete edition of Yakût's important Geographical Dictionary of all Countries known to the Arabs in his days, has been followed up by another publication on Geography. M. de Goeje, of Leiden, has issued the first volume of a Bibliotheca Geographorum Arabicorum, containing the work of Ishâk al-Fârisî al-Istakhrî, hitherto but partly edited by Anderson and Arnold, and lithographed by Moeller. The volume now published is to be followed by two others containing the works of Ibn Haukal and Mokaddasi, when the collection is to be completed by a German translation, with indexes and a glossary.

Of Ibn-El-Athiri's great Chronicle, edited by Professor C. J. Tornberg, of Upsala, another volume, the fifth, has been issued, comprising the years H. 96 to 154. It will be remembered that Mr. Tornberg began his edition by publishing vols. vi. to xii., which were followed, in rapid succession, by vols. i. to v.; thus, only one more volume, the sixth, is wanting to complete the work. Of Professor W. Wright's edition of that valuable, though curious, literary repertory, the Kâmil of El-Mubarrad, brought out in annual parts, printed at the expense of the German Oriental Society, the seventh part has appeared during last year. The same scholar has supplied to Arabic students a very useful chrestomathy, containing some hitherto unpublished texts, with a glossary. Professor Ahlwardt, of Greifswald, has brought out a collective edition of the Divans of the six ancient Arabic poets, Ennâbiga, 'Antara, Tarafa, Zuhair, 'Algama, and Imruolgais; and M. Von Kremer has given, in the Journal of the German Oriental Society (p. 481), an account and some poems, with a German translation, of the Shîite poet Abu-lkâsîm Mohamed

Ibn Hâni', who lived at the court of the Fâtimite Mo'izz, the conqueror of Egypt, in the tenth century. The Arabic version and a new German translation of the curious Neoplatonic tract of Hermes Trismegisthos, an "Address to the Human Soul," has been printed by Professor Fleischer, of Leipzig, in commemoration of the Twenty-fifth Anniversary of the German Oriental Society, held in September last year.

A work, however, of the highest importance to Oriental literary and philological studies, the Kitâb-al-Fihrist of Muḥammad bin Ishâk al Nadîm, is now in an advanced state of publication. This work had been prepared for the press by the late eminent scholar and honorary member of our Society, Professor G. Flügel, when his labours were unfortunately cut short by a sudden death. The annotated text, however, is now being carried through the press by Dr. H. Roediger, and the first volume will probably be issued in the course of the summer. The latter scholar has also published some specimens from Arabic grammarians, including the well-known philologist Abû Alî Alfârisî, in connexion with a treatise on the so-called "Verbal Nouns," in Arabic.

Dr. J. B. Wenig has written a Latin dissertation on Arabic accentuation; and delivered, and printed, a lecture on Arabic poetry.

Dr. M. Steinschneider has contributed to the Journal of the German Oriental Society, a second essay, "On the History of Translations from Indian Languages into Arabic, and their influence on Arabic Literature," chiefly based on accounts of Abraham Ibn Esra (who lived about A.D. 1160), occurring in the introduction to his Hebrew translation of an Arabic astronomical work.

One of the three numbers of the Journal Asiatique issued during last year, is almost entirely occupied by a paper on the Arabic names of some species of plants, by the late M. Clément-Mullet.

Finally, it may be mentioned in this place, that Lord

Stanley of Alderley has continued, in the Society's Journal, his edition, in the Morisco-Spanish, of the Poetry of Mohamed Rabadan, by four cantos, containing the history of Heshim, the great-grandfather of the Prophet.

Syriac studies have also received some important contributions of hitherto unpublished texts. Dr. J. P. L. Land has brought out a third volume of his "Anecdota Syriaca," containing the Syriac version of the historical writings which pass under the name of Zacharias, Bishop of Mitylene. That that worthy dignitary, who flourished in the early part of the sixth century of our era, did not himself write in Syriac, but in Greek, has been proved by Dr. Land many years since. The reasons he now adduces render it highly probable that of the twelve books published by him and generally assigned to Zacharias, five only, viz., books three to seven, are by that writer, whilst the rest have been compiled from various sources by the Syrian translators. Dr. E. Sachau also has published a volume of "Inedita Syriaca," being a collection of Syriac translations of Greek profane writings, edited from MSS. in the British Museum. To the Journal of the German Oriental Society Dr. R. Schröter has contributed two articles on Syriac subjects, one containing extracts from Bar Hebraeus' scholia on the Old Testament; the other, a letter of Jacob, Bishop of Edessa, to one John the Stylite, Presbyter of Jatreb; both with a German translation and critical notes. The publication also of the Rev. Dr. Payne Smith's Syriac dictionary is now being carried on vigorously; two parts have already been issued, containing the first three letters of the alphabet.

Of the Aramaic dialects, Dr. H. Zschokke has brought out a hand-book for the use of students; whilst Professor T. Nöldeke has contributed to the Journal of the German Oriental Society, as a third instalment of his Aramaic studies, a paper on the dialect of Palmyra. In the mean time, Dr. Socin, during his travels in Syria, has been collecting much

linguistic material on various modern dialects, and, from time to time, reported on the progress of his inquiries.

The lapidary remains of the Phænician antiquity have received some valuable illustration by the publication of the fourth part of Dr. M. A. Levy's Phænician studies; this number contains a survey of the labours in this department of research since 1863; besides separate chapters, full of fresh philological matter, on the inscriptions of Abydos. Sardinia, Spain and North Africa; and finally some additions to the author's Phænician glossary. The inscription of Marseilles has again been made the subject of inquiry in the pages of the Journal Asiatique, by M. Halévi, who has ventured upon a new translation, based on a comparison of the text with the Hebrew, with the entire exclusion of the Arabic. Dr. J. Unger, on the other hand, has made some remarks in the Journal of the German Oriental Society, on the slabs both of Carthage and Marseilles, with especial reference to Dr. Meier's explanation of these documents.

An event, however, of the highest importance to Semitic palæography, as well as to ancient history, is no doubt the discovery of the *Dibon* monolith, which has been only lately discussed at a meeting of our Society. In spite of its importance, it would hardly seem necessary for the Council here to enlarge on a subject which has already received its full due, if not more than its due, of attention at the hands of so many scholars.

The number of Himyaric antiquities discovered in Yemen is increasing almost daily. Captain Miles's valuable donation to this Society has been mentioned before. The two bronze tablets, noticed in last year's Report as likewise presented by that officer, have since found an interpreter, together with a considerable number of other Himyaric inscriptions, in Dr. M. A. Levy, in the Journal of the German Oriental Society, where, at the same time, lithographs of them are given.

The British Museum, also, has from time to time been

enriched by inscriptions and other antiquities, among which we may mention a newly-received stone, containing a beautifully cut  $\beta o \nu \sigma \tau \rho o \phi \eta \delta o \nu$  inscription; also two copper tablets, which are said to constitute one inscription, together with the tablet which has lately come into our possession.

An Himyaric monument of probably a somewhat similar purpose to the sculptured alabaster slab lately presented by Captain Miles, has been treated in the Journal Asiatique, for 1870, by M. Clermont-Ganneau, who takes it to represent a sacrifice to 'Athtar, the deity invoked on the slab. Some remarks on the same monument, though from more imperfect squeezes, have been made by Professor Gildemeister, in the Journal of the German Oriental Society for 1870 (p. 178).

Some progress has also been made during last year in the field of Cuneiform Researches. Of Mr. E. Norris's Assyrian Dictionary, the second volume has been published, whilst a considerable portion of the third volume has already passed through the press. It must be the sincere wish of all Orientalists that so zealous and able a fellow-labourer may yet enjoy many years of health and vigour to see his work completed.

Sir Henry Rawlinson has lately added a vast amount of fresh material by issuing, with the assistance of Mr. G. Smith, another volume containing, on seventy folio plates, selections from the Miscellaneous Inscriptions of Assyria. Among these may be mentioned the Assyrian Canon, consisting of chronological tables supplying a continuous succession of eponymes for 228 years (from B.C. 893 to 660), an inscription on a monolith found in the ruins of Kurkh, relating the campaigns of the earlier years of the reign of Shalmeneser II.; a copy of the inscription of Sennacherib on the rock at Bavian; the text of the Decagon Cylinder of Assur-bani-pal, and various miscellaneous historical inscriptions, besides copies of several contracts, deeds, observatory reports, astrological and mythological fragments.

Mr. G. Smith has, meanwhile, been steadily pursuing his labours at the Annals of Sardanapalus. A further contribution to Assyrian philology is also promised by Mr. F. Tulbot for the next number of the Society's Journal.

The so-called Median Cuneiforms, on the other hand, have received some illustrations in a paper by Dr. A. Mordtmann, in the Journal of the German Oriental Society.

The language of the other principal branch of Muhammedan races—the Turks—has not been neglected.

M. de Schlechta-Wssehrd has published a useful French and Turkish manual of terms and phrases used principally in diplomatic documents.

To M. Pavet de Courteille we are indebted for an East Turkish Dictionary, an important addition to the labours of Messrs. Véliaminof-Zernof and Vámbéry.

Dr. Zenker, likewise, has been continuing his dictionary of the Turkish, Arabic, and Persian, by three more parts, viz., 14 to 16.

The various dialects and history of the Indian Archipelago have been, as usual, successfully cultivated in the Journals of the Dutch Institute and the Batavian Society, which contain several valuable philological contributions, the former by Messrs. H. Kern and H. C. Klinkert, the latter by Messrs. J. G. F. Riedel and H. N. van der Tuuk. The Batavian Society having, in the course of last year, issued a number of wellexecuted typographic impressions of Kawi copper-plate inscriptions, this important field of inquiry, which had so long been allowed to lie fallow, has at length been successfully taken up by Prof. H. Kern, of Leiden. This scholar has just published a volume of Kawi Studies, containing two cantos of the text of the Arjuna Vivâha in the ancient Javanese, with a Dutch translation, notes, and an introduction. The Dutch Institute has further printed M. T. Roorda's Javanese text of the Wayangs of Palasara, Pandoe, and Raden Pandji, and the first volume of a Malayan

Chrestomathy by M. G. K. Niemann. It remains briefly to mention the latest publications on Chinese and Japanese literature and philology. Mr. J. Summers's Monthly Magazine, the Phania, of which ten numbers have as yet been issued, will, no doubt, prove a useful repository to scholars interested in these inquiries, containing, as it does, numerous and valuable essays on the literature, history, and religion of the peoples of Eastern Asia. The Memoirs of the Munich and Vienna Academies also contain, as usual, contributions on the same subjects, by Messrs. Plath and Pfizmayer. Dr. V. Strauss has published a new German translation of Lao-Tse's Tao Te King, with a comment and an introduction. Mr. A. B. Mitford, in his Tales of Old Japan, a book at the same time instructive and amusing, makes us acquainted with the legendary lore as well as the domestic life and manners of the Japanese. Whilst grammatical inquiry has been promoted by one publication only, the second volume of M. St. Julien's Syntaxe nouvelle de la langue Chinoise, Chinese lexicography has received more than usual attention during last year. The Revds. R. S. Maclay and C. C. Baldwin have supplied an alphabetical dictionary of the Chinese language in the Foochow dialect; the Rev. W. Lobscheid, a Chinese and English Dictionary, arranged according to the radicals; Rev. J. Edkins, a Glossary of the Miau dialects; Mr. F. Porter Smith, a vocabulary of proper names in Chinese and English; and M. Paul Perny, a Dictionary in French, Latin, and Chinese, of the Mandarin dialect.

In concluding these remarks, we may mention that Mr. J. Summers is now engaged in compiling a new catalogue of the Society's important collection of Chinese printed books, as well as of that of the India Office Library.

It will be incumbent on this meeting to elect a new president for the ensuing year, in the place of one whose constant attendance at the Society's meetings, and deep attachment to Oriental research, in which he occupies himself so prominent a place, have lasting claims on the gratitude of this Society. Sir Henry having intimated to the Council that his duties at the India Office and the Geographical Society would not permit him for another year to combine the office of a President with that of a Director of this Society, Sir Edward Colebrooke has kindly allowed himself to be put in nomination for the former office, and the Council feel assured that the warm interest Sir Edward has always taken in the objects of this Society, coupled with that very name which marks one of the most glorious epochs in its history, will strongly recommend him to the meeting.

According to Art. XXI. of the Society's regulations, the following five members of the Council will go out: General Cunningham, the Rt. Hon. Lord Lawrence, E. L. Brandreth, Esq., James Fergusson, Esq., and Sir H. Bartle E. Frere. In their places, the Council propose to the meeting the following names: Sir Donald F. McLeod, the Rt. Hon. Lord Stanley of Alderley, Prof. T. Goldstücker, N. B. E. Baillie, Esq., and the Rt. Hon. Holt Mackenzie. In the place of the last-named gentleman and Sir Edward Colebrooke, the Council recommend Sir H. Bartle E. Frere, and Mr. J. Fergusson for the two vacancies in the list of vice-presidents.

## AUDITORS' REPORT.

Your Auditors, having examined the accounts of the past year, and compared them with the vouchers, find them correct. They have also formed a careful estimate of the income and expenditure for the ensuing year, and anticipate that the income will suffice to meet the expected demands on the Society's resources without trenching on the balance in the bankers' hands at the beginning of the year.

James Fergusson, Auditor for the Council.

Neil B. E. Baillie, Auditors for the Society.

Henry Lewis,

The reading of the Report being concluded, it was proposed by Sir John Bowring, seconded by Major-General G. Le Grand Jacob, and carried unanimously:—

"That the Report of the Council and of the Auditors be adopted, printed, and distributed, and that the best thanks of the meeting be presented to Sir Henry Rawlinson for his constant attention to the affairs of the Society, and his unwearied exertions to promote its interests; and to the Vice-Presidents, Council, and other Officers of the Society, for the zealous and efficient manner in which they have discharged the duties of their several offices."

Sir Henry Rawlinson, after returning thanks for the flattering terms in which his services had been mentioned in Sir John's proposition, said:—

The very able and exhaustive Report which has just been read to you, and for which we are mainly indebted to the industry and critical knowledge of our Secretary, leaves me really nothing further to say on the subject of the prosecution of Oriental studies in the East or in the West.

The long list of recent works and papers which the Secretary has enumerated in every department of Oriental learning testifies to the increased and ever-increasing interest which is felt in the cultivation of those studies for which this Society was specially instituted; and shows, moreover, that we have borne our due part in the healthy activity that surrounds us. I have sometimes heard murmurs of regret that our prosperity diminishes—that our resources and means of usefulness become attenuated—by the creation of the many subsidiary societies that have arisen, if not under our auspices, at any rate in a great measure from the impulse and encouragement we have given to Oriental I allude to such bodies as the Syro-Egyptian Society, the Palestine Exploration Fund, and more recently the Society of Biblical Archæology-all of which, according to the views of many, ought to be merely sub-departments

of the Royal Asiatic Society of Great Britain: but I cannot for my own part find it in my heart to complain of such independent action in special branches of inquiry. As the mother-country benefits by her colonies scattered over the different quarters of the globe, so must this parent Society benefit by the creation of fresh centres of interest in the great domain of Oriental Science. For a time possibly our finances may suffer, owing to the diversion of subscriptions into other channels; but in the long run we shall right ourselves, even financially, if we only hold our literary position at the head of the Orientalism of England. more indeed that a knowledge of Eastern languages and Eastern science is diffused amongst the public, the better it must be for that body of which the true and the noble vocation is to guide and encourage and preside over all such researches for the general good.

It is a matter of much regret to me that the many heavy calls upon my time—and especially the direction which is about to be confided to me of one of our most flourishing sister societies—compels me to surrender into your hands before my time of office is complete, the Presidency of this Society, which you were good enough to entrust to me in 1869; but I have at any rate the satisfaction of knowing that I resign my functions into most worthy and most thoroughly competent hands. The name of Colebrooke is in itself a tower of strength—and Sir E. Colebrooke has already on former occasions shown you that he does not yield to his illustrious father either in his own earnest interest in Oriental science, or in his anxiety to promote its cultivation. sure, gentlemen, that the Society will not derogate from its high position while the Presidency remains in his hands, but that he will lead you on to increased honour, numbers, and usefulness.

The Ballot was then had recourse to, for the election of a

President, two Vice-Presidents, and five members of Council, when the result was declared to be as follows:

President: Sir Thomas Edward Colebrooke, Bart., M.P. Director: Major-Gen. Sir H. C. Rawlinson, K.C.B., D.C.L., F.R.S.

Vice-Presidents: The Right Hon. Sir Edward Ryan; M. E. Grant Duff, Esq., M.P.; Sir H. Bartle E. Frere, G.C.S.I., K.C.B.; James Fergusson, Esq., F.R.S., D.C.L.

Treasurer: Edward Thomas, Esq., F.R.S.

Honorary Secretary: Professor Thomas Chenery.

Honorary Librarian: Edwin Norris, Esq.

Secretary: J. Eggeling, Esq.

Council: N. B. E. Baillie, Esq.; C. P. Brown, Esq.; Dr. Archibald Campbell; John Dickinson, Esq.; M. P. Edgeworth, Esq.; Claude J. Erskine, Esq.; W. E. Frere, Esq.; Prof. T. Goldstücker; Arthur Grote, Esq.; Charles Horne, Esq.; The Right Hon. Holt Mackenzie; Sir Donald F. McLeod; Sir Charles Nicholson, Bart.; Osmond de Beauvoir Priaulx, Esq.; The Right Hon. Lord Stanley of Alderley.

Sir H. Rawlinson having vacated the chair for the new President, Sir Edward Colebrooke addressed the Meeting, as follows:

Gentlemen,—My first duty in acknowledging the honour you have done me, in inviting me to preside over this Society, is to express the regret which I feel, in common with all the members of this Society, at the premature retirement of Sir H. Rawlinson from the chair which he has occupied, with so much dignity and advantage to the Society, during the past two years. We must admit that the invitation which has been made to him to preside over one of the most active and popular associations in this metropolis, is one to which he is fully entitled from his labours in advancing our knowledge of ancient geography, and in promoting modern discovery. It involved demands on the time which may well make one, whose time is so largely occupied

by official duties, unwilling to join with it the position of President of the Royal Asiatic Society. It is not the less a matter of regret to us, that we shall lose the advantage which the reputation and ability of one of the most learned contributors to our proceedings have given to the Society, during the time he has occupied the chair. For myself, I feel that the honour which you have conferred upon me, both on the present and on a former occasion, is due to the inheritance of a name which holds a foremost place in the respect of all Eastern scholars, and is intimately associated with the foundation of this Society. It adds much to the difficulty I feel in taking the chair, that I have such an example before me; and I should certainly have shrunk from a position to which I have, personally, no claim, did I not rely on the support of former colleagues, and carry with me the recollection of the aid I have received from your learned Director, in my endeavour to discharge the duties you have imposed upon me.

I may at the same time say that the work on which I have been recently engaged of endeavouring to give a somewhat full account of the life and varied labours of Mr. H. Colebrooke, labours which you are aware extended to many fields beyond the range of Oriental research, has led me to examine more carefully than I had hitherto done some of the subjects of inquiry connected with the ancient literature of India, to which so much of his time was devoted; and this has added largely to the interest I feel in the progress of these researches. His aim, I need hardly say, like that of his successor, was to throw some light on one of the most interesting as well as obscure passages in the history of the world. It was not merely to arrive at some distinct knowledge of the state of the arts, science, and literature of ancient India, and in age far removed from our own, but to trace the rise and progress of the religious and philosophical opinions which have prevailed from time to time;

some of which maintain their influence on the manners and modes of thought which exist in those countries in the present day. The field is a wide one; it is one in which we look for the aid of kindred societies now established in considerable numbers both in the East and West, and we are enabled to pursue these inquiries under advantages which the pioneers of these studies did not possess.

It is a task to which we are more than ever impelled from a feeling of duty towards the inhabitants of a vast country, so strongly united by political ties with our own. It may be not unreasonable to hope that the knowledge thus acquired of the former history and condition of these countries may have some practical influence on its present condition, and may aid in solving some questions bearing on its future political and social life. But for this we must trust to the labours and co-operation of learned natives of India, many of whom, we rejoice to know, are warmly interested in researches whose sole aim is to arrive at an accurate knowledge of the former life of the nation, as it is shown in the different branches of its literature or science.

I trust that the Royal Asiatic Society will continue to take a full share in these inquiries, and that the efforts of its members may add to its reputation and bear fruits in the well-being of the people of India.

The Meeting was then adjourned to June 19th.
